I have up for sale or trade a Bext Frequency Agile FM Exciter. this has been gone over and refurbished to factory spec's. I put in a new crystal oven and replaced some of the old IC's in the oscillator with updated components. I have a maual for this exciter. the exciter is variable from 1watt to 15watt. this is completely agile via front switches and required no tuning internally. I am asking for 1300.00 + shipping or will consider trades for some Hamilton AM1000 Rangemaster Part 15 Transmitters and some LPB or Radio Systems carrier current equipment and couplers.

Thank You,

Rev. Robert P. Chrysafis

Right.  The best possible antenna is HIGH, CLEAR and LONG.

#22 varnished wire is easy to get (scavenge a yoke from an old TV set)
and very convenient for the job.  It's thin enough and colored well
enough to be almost invisible.

There is a discussion of this in The Boy's First Book of Radio and Electronics.

As it turns out, I located one at a local muscian audio supplier for a very fair price. It is the Rolls MB-15.

Meaning what, that it will have a small niche market? I doubt it. ISDN actually had broad appeal back in the days before DSL and cablemodems - I used it for a year or two myself. It was still used widely in Europe for some time after DSL and cable became commonplace here. BPL won't be that popular. BPL probably won't even manage the small niche that I believe you're referring to. It's just too late in the game.

The nail in the coffin will be subscribers losing their connection every time Joe CB'er down the block keys up. I don't see BPL noise as a factor in shortwave's future prospects.

I'm with you and Steve on this. BPL has already been tried and failed in a number of other countries; at least one pilot project here in the U.S. has already failed as well. Interference to/from amateurs is occasionally cited as a reason but IMHO if the BPL operators felt they could make money, the regulatory agencies would see to it the amateurs went away, not the BPL.

> 2. One by one, the industrialized nations will find the internet a neater, cheaper way of reaching their target audience, and their shortwave operations will end, except for

I've my doubts the Internet will be a real viable replacement for all shortwave anytime in the near future.

For those broadcasts intended to reach a country's citizens abroad, yes, the Internet is probably a more economic solution. Likewise, for those intended to reach an audience of foreigners in a developed country.

The Internet is more easily jammed (the Chinese are already doing so on a nationwide basis) and it's far easier to monitor what people are listening to. It will not, with current protocols, replace shortwave for reaching audiences in countries where the government would rather they weren't listening.

Computers may be cheap, but they're still a LOT more expensive than a cheap radio. In isolated areas a reliable Internet connection with adequate bandwidth might be an even bigger problem. (heck, at my location - within 30 miles of Nashville - internet audio is problematic due to my connection) I don't think the Internet will in the near future replace shortwave for reaching audiences in sparsely-populated and poor countries.

Of course, that does mean that secular broadcasts directed at rich free nations are likely to go away. Listeners will have to develop new skills to pull out the weak stations beaming their signals to far away parts of the world -- and to identify the broadcasts in exotic languages. Won't be much English - or for that matter, Spanish, French, German, or Japanese - left.

> 10. Eventually, world regulatory agencies and the ITU will examine the state of international broadcasting and see that it has turned exclusively into a fundraising tool for bible thumpers. At this point, they will be hard-pressed to justify maintaining the valuable spectrum allocations for shortwave broadcasting. All of the current shortwave broadcasting bands will shrink to 100-200 kHz apiece, and some will vanish altogether, as the worldwide demands for digital data spectrum increases.

Don't really see much demand for spectrum for data on shortwave. (VHF & especially microwave are a different story!) It's not easy to reliably transfer significant amounts of data over shortwave; SW transmission will be very much a last resort. So many of the point-to-point users have shifted to satellites. I think the allotments will largely stay put. I could even see a point where the FCC concludes a segment could be opened for "amateur broadcasting", where "pirates" could operate legally as long as they keep their power down to a reasonable level.

Telamon <telamon_spamshield@pacbell.net.is.invalid> wrote in message

It is an old refrain, and I don't understand it. If you ask every SWLer why they listen to news via shortwave, how many of them would say, "Because it's not available over the internet"? Few if any, I suspect. People listen to the news via shortwave because they like listening to shortwave and like the news services that shortwave makes available. Period.

I'd also like to point out that I returned to shortwave listening after being away from it for many years. Why did I return? Because of shortwave related information that I came across ON THE INTERNET! And indeed, it seems to me that the internet could be the best thing that ever happened to ham radio and SWLing. We, and the organizations that represent us, just have to USE the internet to educate people about our fascinating hobbies. If you put the information out there, people will be drawn to it. That's just the way it is.

It seems to me that the internet could be precisely the thing that saves SWLing!

Steve

>too late in the game.

In Europe, ISDN came in early, was adopted very quickly, and was very reasonably-priced compared with the alternatives. In the US, the pricing schemes were outrageously expensive and most of the telcos either did not have it available or didn't even know what it was. As late as five years ago, I went around with GTE for two months trying to get an ISDN line for a local voiceover studio.

In the US, ISDN was a flop because it was too expensive, too slow, and too late to market. If it had become available as quickly as it had in Europe and as universally, it would have been very popular. But it wasn't.

I gather these are the issues with BPL... it's not anything that you can't get better from other services that have been in place longer.

Wed 24 Nov 2004

An Edinburgh radio station has been named Britain's best student station at a national awards ceremony.

Fresh Air FM, which is run by students at Edinburgh, Napier and Heriot-Watt universities, was handed the prestigious award by judges from the Student Radio Association. The victory means that the group can now host a special programme on BBC Radio One this Christmas.

Kate Lorimer, a spokeswoman for the station, said: "We are proud to announce that we are now officially the best station of 2004, after beating off challenges from Warwick University, De Montefort University and Southampton University.

"This is a huge achievement for Fresh Air. After financial troubles held the station back for two years, we are riding high on a successful broadcast in April of this year.

"This is not only an award for the students involved, but also illustrates to the rest of Britain how vibrant the music scene is in Edinburgh and Scotland. We are now able to compete successfully against the major players from England, Wales, and Northern Ireland on the radio waves, and it sets the standard for future broadcasts."

The ceremony, which was hosted by BBC Radio One's Steve Lamacq and Jo Whiley, was held in London last Friday night. There were twelve awards up for grabs, and Fresh Air FM also came close in the best drama category, with its show Bruntsfield Place coming third.

A Student Radio Association spokesman said: "Congratulations to all involved in the station."

24 November 2004

Children at Wroxham School in Potters Bar, Herts, will be making the airwaves in the next few weeks on their very own radio.

The radio station was paid for by proceeds from Potters Bar Carnival.

The school will be using the new equipment to help improve the pupils' reading and speech skills.

BBC engineer Jeff Links visited the school last week to show the children how to use the station and it is expected it will be fully up and running before the start of the Christmas holidays.

Eastbourne Youth Radio goes live again for the fourth time today (Wednesday).

Each year has seen an expansion of the project, and now, with 65 hours of continuous broadcasting involving 1,500 young people from 27 local schools, colleges and youth organisations, EYR 87.7 FM has become one of the largest and most prestigious annual youth events in the south east.

This is the last time the project will be funded from the Government's Single Regeneration Budget (SRB-6) and next year EYR will be entirely dependent on local sponsorship.

EYR manager, Tim Sorensen, said, 'We've already had fantastic support over the last four years from local businesses and organisations, and those taking part have always contributed as well.

'EYR will definitely go ahead next year, but we now have to find ways of paying for the following years from local resources, if the project is to continue.'

Already, cities and towns throughout Britain have been casting envious eyes on the prestigious project that has delivered a wide variety of educational skills in such a unique and innovative manner.

Last year, representatives from Norwich visited EYR, and this year managed to run their own highly successful youth radio, copying the Eastbourne model.

Government education advisors are also known to be extremely interested in the way EYR has motivated young people in Eastbourne.

Mr Sorensen said, 'Eastbourne has led the way in showing the rest of Britain ways of engaging young people in their community in an exciting and original way.'

Eastbourne Borough Council, recognising how EYR so effectively engages local young people in community issues, has given the station special funding to deliver the youth view on plans to regenerate the town centre, as part of its statutory consultation process.

This has firmly given EYR for the first time an official place in local government affairs, alongside that already given to local newspapers which are paid to carry planning applications.

The programme schedules on these pages are the best witness to the rich variety of ideas local young people have come up with in creating this year's programmes.

This year sees an increase in live choir music, live drama, and, with a general election expected next May, a greater interest in politics and local affairs.

```

November 24, 2004

Got an email from a friend, asking me what I thought about commercial radio. What I like, dislike? How they can attract a following? Can they? What's the future?

I asked if I could reply in the form of a post... here it is... I don't call it commercial radio, I call it McRadio:

...the Alt Rock station in Albany plays the same songs by the same artists as the Alt Rock station in Wichita. Just like a burger at McDonalds, radio has become packaged and predictable.

The reason for this is well known, the radio stations are essentially bought and paid for by the record companies through what is known as Payola. So, they aren't in the business of helping you and I enjoy music, they are in the business of making money... at the end of the day, organizations have to make money to stay in business, but if that is all that they care about, they will need to figure out a way to do without relying on people listening to the radio, because I don't think that the scheme will be available in 10 or 20 years.

Let me explain... As we all know, the on thing that is certain is that the future brings two things: More Choices and Change.

Today, I have several options for hooking up an MP3 player to my car; from cassette adapters to units that allow me to integrate my iPod into the car - the iPod becomes my personal library of music that I have an interest in. Over time, more and more cars will offer other built-in functionality beyond commercial radio and CD players. Today, plenty of cars come with satellite radios, hard drives, and integration kits for MP3 players, etc. This adoption curve will continue and the technology will improve that is required to enable people to share their music collection among devices (car, home stereo, portable device, etc) and the tools for getting music will improve as well. Imagine the next iteration of public, high speed, wi-fi and and a car stereo with an internet connection: want the new Alicia Keys CD? Download it to your car. When you get home, you can transfer it to your home computer, stereo, etc. Is that realistic? Yeah, all the technology exists to do that today, it will probably be a couple of years before anyone puts it all together and several more years before it is enjoys wide spread adoption, but it is totally possible. Will this be available in 3, 5 or 10 years? Who knows, but it will be available. One example of this is that I can easily stream music to my stereo from my PC today. So, now that I can stream it, why can't I save a copy there if I want?

There might even be something comes before this - and who knows, this might be available to today - imagine a TiVo like music service. Recording a stream of radio and then jumping through it, saving and deleting songs as you go. So what you end up with is an archive of songs you've recorded from radio, building a library as you go. This might help radio extends its lifetime, but this seems like a klunky solution. Now, some people will say that satellite radio is the future and with the narrowly focused channels and the absence of payola, the assumption is that people will be content for a while. I don't agree with this. This is still a push model. Someone else deciding what I'm going to listen to. I don't like that. As things like TV on demand, which is available today, get integrated into our lives we will be less likely to put up with someone else dictating when we have to listen to something.

Can radio overcome this uncertain future? Can they build audience loyalty? In short, NO. I think they have something major working against them: You can't be all things to all people, which is what they are relying on with a push model.

Now, I think that radio needs to better understand what people want. Some radio stations will exist longer than others, there will always be demand for Top 40 or news, those stations will last the longest - regardless of the underlying technology infrastructure delivering the music (satellite, etc). But the radio stations that want to be in business 10 years from now will need to better understand how consumers choose music. Let me give you an example, we just got a new radio station in my area - Smooth Jazz 92.7, they play (shockingly) smooth jazz (FULL DISCLOSURE: I know one of the DJs). It isn't that I like or even know half the artists on the station, but the music is essentially all the same and I know how I will feel when I listen to it, actually, they've transcended "genre" and they're offering "mood". The radio station that can do that, does have a future, albeit a short one. Genre can be all over the map, mood is a much better programming method. If a radio station decides that they will go this route, they'll have to understand that they will give up listeners because not everyone will be in that mood all the time (yikes, did I just write that?). For instance, I listen to the Jazz station mostly in the evening, when I'm reading, etc. When I'm driving to work, for instance, I don't want to listen to Stairway to Heaven - I want Master of Puppets. On the drive home however, I want to know about traffic and Master of Puppets isn't quite right... perhaps some Jeff Buckley or Alicia Keys.

Think about it, radio stations program their music by genre, but most peoples CD collection is all over the map. Right? Our CD collection, currently around 400, is so diverse and eclectic that it defies categorization. Sure, there are some CDs of mine that my wife will never listen to... and some of hers that I will never, ever listen to, but it is all over the map - from ABBA to Zebra - and there is probably no radio station in the world that has played songs from both of those artists. Wow, I sort of went all over the place on this one...

So, do you think that commercial radio has a future? What can they do to build loyalty?

But how about WorldSpace satellite radio?  They
have a couple of dozen channels with coverage of
Africa and Asia and much of Europe. They even
carry different services on the various spot beams
from a single satellite.  I gather they rent some
space to national broadcasters.  Their receivers
aren't dirt cheap, but well within the means of
many people in the third world. I gather that they

are NOT doing well financially, however. They have
a web site www.worldspace.com . There was some
initial relationship between them and XM, but
WorldSpace's partial foreign ownership killed that
from what I heard..

(A) ISDN was faster than dialup - no one (hopefully) is claiming that it was meant to replace leased lines.

(B) Yes, ISDN was expensive in some places. In Ohio we got lucky. Business ISDN was tarriffed per minute, but you could get residential for as little as $37/month for 75 calls/month (metered access, 8c/call after that) or about $45 flat rate.

And I still maintain that ISDN was more useful for that time period than BPL will be now.

**SJS (trying to tie this argument back into radio somehow, and failing miserably)

In the US we'd call that a "move-in." The cut in staff is downsizing. I never expected we'd have this much influence after the cold war as we seem to have.

It also seems that whoever censors Russian radio has been in contact with Li'l Powell.

> has become packaged and predictable.

What is unusual in the idea that all Americans would like the same songs within a particular genre? You are saying taht ER or West Wing or CSI should only be run in one city, because running them on a network is predictable? Gimme' a break.

Go back to the mid-50's. One of the popular TV shows was a top 10 countdown, with a group of 4 singers who sang "covers" of the weeks's most popular songs. So, going back 50 years, there was nationbal consensus in the hits in different types of music.

An no one listens to an FM in Albany and then switches to one in Wichita. Your comparison is without validity.

>
> The reason for this is well known, the radio stations are essentially
> bought
> and paid for by the record companies through what is known as Payola.

Payola is a crime. There has only been one indictment for it in the last 10 years, since it is so serious. And one station, in upstate NY, fired their PD last week for suspicion of impropriety with a record company. All group broadcasters have a severe policy against payola and will fire instantly anyone involved in it.

> to the radio, because I don't think that the scheme will be available in
> 10
> or 20 years.

You also have the term "payola" totally wrong. Payola only exists if a staff member of a station takes money for play of music without the knowledge or consent of management. Since DJs don't select music at 99% of music stations anymore, this is a moot point anyway... only the PD does, and staions have safeguards to supervise their PDs.

If a station takes money, it is advertising revenue, but paying a record for play must be disclosed ounder another part of FCC rules.

Anyway, the record companies are in such bad shape due to piracy and dowloading they certainly do not have the ability to influence the $23 billion dollar radio business.

You know, they said the same thing about the 45 RPM record and the cassette. The problem with everything you indicate is that it either takes a lot of time (and thus for only hardcore music fans) or costs money. Radio will be around for many decades.

Arguments based on payola are, by definition, faulty. There is no such practice. In fact, stations spend lots of money to research what listeners want to hear locally. I know of some stations that spend as much as $250,000 a year for this... so that tey will play the songs their listeners want to hear.

This is true. Radi can satisfy well over 90% of the people most of the time.
This has been true "forever" since for many decades radio has not been the
only music delivery system. Yet in the long run, most people find the free
and convenient aspects of radio to be useful in most instances.

> etc).

Actually, Top 40, which has been called CHR since the 70's, is a tough
format. And all news is a shrinking format with very few stations left.

> to it, actually, they've transcended "genre" and they're offering "mood".

That is the whole idea... to create a mood. Otherwise, you are a jukebox or
an MP3 player in random mode.

I presume you are talking abot WSJW in Starview (York MSA) which has had
excellent ratings increases (more than double) since switching from Oldies
in late 2003. This format is highly researched, and the whole appeal is in
the blend, just as the same was true for the enormous success of Beautiful
Music in the 70's... mood creation, relaxation, stress relief, etc.

> The radio station that can do that, does have a future, albeit a short
> one.

The first smooth jazz station debuted in around '86 or '87 in Los Angeles,
and is still top 5 in 25-54, the demo that matters for sales. This is a
healthy format wherever it is done, and has true staying power.

> to Heaven - I want Master of Puppets. On the drive home however, I want to
> know about traffic and Master of Puppets isn't quite right... perhaps some
> Jeff Buckley or Alicia Keys.

This is why your radio has buttons and knobs. Eveyone in the US averages 3 to 4 radio stations they make frequent use of, and several more for occaisonal usage. Listeners know where to go at any time for the particulary programming they are in the mood for.

Radio does not set a mood, it complements a listener mood. If I am in the mood for rock (heaven forbid), I know where to go. It is not the station job to change my mood.

> Think about it, radio stations program their music by genre, but most

> station in the world that has played songs from both of those artists.
> Wow, I sort of went all over the place on this one...

So? This is why recorded music has one purpose and radio stations another. And I have well over 3,000 CDs, but spend the better part of my leisure time listening to radio, not CDs.

I figure Bible thumpers have about 4 more years before any action
would be taken to auction off the International spectrum we regulate.
Not sure how you auction International property. There's too much to
be paid back to these large political contributors and they tend
(while claiming to speak for God) to claim Neo-Conservatism as the one
true religion.

Unless Haliburton needs it for Iraqi oil theft operations, you can
consider it safe for a while longer.

I can see RFID tagging and water-meter transponders operating on SW
frequencies.  Maybe with a modest spread-spectrum (over a few hundred
KHz) scheme.

I don't see portable messaging schemes working on SW.  The problem is
noise from digital equipment.  (computers, mostly)  I think you're going
to have a hard time pushing enough RF through modern metal-framed
buildings to overcome computer hash.

This is pure speculation on my part, but I can foresee a time when the
VHF/UHF bands become so clogged with highspeed data that less glamorous
operations such as regional/citywide paging, low-rate text messaging,
product ID tagging, water meter transponders, etc., go looking for the
lower frequencies. Without broadcast QRM, a relatively modest paging
transmitter on, say, 6.1 mHz could blanket a 10 mile radius 24 hours with
little of the line-of-sight problems of VHF.

>I could even see a point where the FCC concludes a segment could

This would be great, then I could ignore all of them in one spin of the
dial. :)

# U.S. plans to sneak tiny radios into North Korea for its information-starved citizens

By Tim Johnson
Knight Ridder Newspapers

Seoul, South Korea - (KRT)

The U.S. government is preparing to smuggle tiny radios into North Korea as part of a newly financed program to break down the country's isolation.

For the next four years, Washington will spend up to $2 million annually to boost radio broadcasts toward North Korea and infiltrate mini-radios across its borders.

North Korea, probably the most isolated country in the world, has only radios that are rigged to capture broadcasts lionizing the nation's Stalinist leadership. The broadcasts also blare from outdoor loudspeakers.

The American plan to smuggle small radios into North Korea is outlined in the North Korean Human Rights Act, which President Bush signed into law Oct. 18.

The sweeping act provides money to private humanitarian groups to assist defectors, extends refugee status to fleeing North Koreans and sets in motion a plan to boost broadcasts to North Korea and get receivers into the country.

North Korea's Kim Jong Il regime says the tiny radios will air "rotten imperialist reactionary culture" to undermine the country.

The human rights act, in its broad scope, also has encountered opposition from President Roh Moo-hyun, South Korea's center-left leader. Officials under Roh say the act will stiffen Pyongyang's resistance to the outside world and hinder already-stalled talks to get North Korea to abandon its efforts to build a nuclear arsenal.

They scoff at the U.S. plan to smuggle in radios, saying it's a goodhearted idea but one that will worsen the plight of North Koreans. Anyone captured with a radio, they said, might face prison.

Supporters of the tactic argue that it offers a ray of hope to a populace that's hungry for news amid food shortages and an acute humanitarian crisis.

"There's an incredible desire among North Korean people to know what's going on," said Suzanne Scholte, the head of the Defense Forum Foundation, a nonprofit group in Falls Church, Va., that focuses on American policy toward

North Korea.

A small number of clandestine radios are already in the country, sent in by helium-filled balloons deployed by South Korean religious groups or brought in by traders across North Korea's border with China.

"Some people listen to South Korean broadcasts under their blankets," said Lee Gui-ok, a young North Korean mother who fled to China in 1999 and later moved to Seoul.

Lee said the plan was worth carrying out - even if it endangered some people - because it would offer hope to North Koreans that the outside world cared about their situation.

"If they don't have radios, they can't listen to South Korean broadcasts. If they had them, they would listen," Lee said.

A House of Representatives International Relations Committee report on the human rights act says North Korea's radio broadcasts exalt ruler Kim Jong Il, feed "paranoia about the threat of attack by the United States, and misrepresent the conditions and standards of living that exist in the outside world, particularly in South Korea."

The plan takes a cue from previous U.S. efforts in other parts of the world. In 2001 and 2002, American diplomats in Havana, Cuba, passed out more than 1,000 short-wave radios so Cubans could tune in to the Florida-based anti-Castro radio station Radio Marti. The radios were taken to Havana in diplomatic pouches.

That wouldn't work in Pyongyang, because the United States and North Korea don't have diplomatic relations.

How to smuggle the radios in remains to be worked out. Legislators may keep operational details of the program classified to prevent North Korea from countering them, said a Capitol Hill staff aide who's active in shaping U.S. policy on North Korea, speaking on condition of anonymity.

"I don't see radios in balloons as particularly tenable," the staff aide said. During most of the 1990s, the South Korean military deployed balloons to send propaganda leaflets, rice and radios into North Korea, but suspended the practice in late 1999 under then-President Kim Dae-jung's "sunshine policy" of opening contacts with Pyongyang.

Since then, Seoul has sought to stop even private groups from airlifting radios with balloons. In March 2003, police blocked a Korean-American pastor from Artesia, Calif., Douglas E. Shin, as he and colleagues prepared to send 700 radios across the border slung from 22 helium-filled balloons.

"Everybody wants the radios," Shin said. "If a regular farmer or worker gets caught, they get slapped on the hand, and the guy who confiscates it keeps it because he wants to listen to it."

B & S Broadcasting was eliminated from Auction 37 at the end of round 18 and thus did not win any construction permits.  On Friday afternoon Auction 37 paused for the weekend at the conclusion of round 22.  Three licenses have still not received any bids:  Gackle, ND; Medina, ND; and Coahoma, TX.  Current top bid is $6.1 million for a license in Pacific Junction, IA, followed by just under $4 million for a license in Brewster, MA.

Go figure!

news:cm9q30$lgk$1@xuxa.iecc.com...

> The Billings Gazette
> November 2, 2004
> Washington DC
>
> Gary Smithwick worked as a radio announcer during high school and college.
>
> This week, the D.C. telecommunications lawyer will try to buy a radio
> station.

> The Federal Communications Commission (FCC) will auction 288 licenses that grant authority to build commercial FM stations in specified towns and cities across the country.
>
> As many as 456 applicants will bid on licenses.
>
> "It's like a lottery ticket. People see the licenses and think, 'Maybe there's an investment opportunity for me,"' said Smithwick, a former FCC attorney.
>
> The auction, which begins Wednesday, will be the first since 1999 to sell spectrum on the FM dial, and has generated interest among radio conglomerates, regional broadcasters and individuals.
>
> At least 47 individuals and companies, including Mr. Smithwick's B&S Broadcasting Co., have been approved by the FCC to bid on a license to build an FM station in Nassawadox, Va., a blip of a town on Virginia's Eastern Shore with 572 persons but no radio station.
>
> The licenses most in demand are for stations in Carmel Valley, Calif., and Taft, Calif. Nearly 80 applicants have indicated they will bid on each license.
>
> "I have been in this business a long time, and I was shocked at the number of applications for licenses," said George Reed, managing director of Media Services Group, a media brokerage firm in Jacksonville Beach, Fla.
>
> Clear Channel Communications Inc., the nation's largest broadcasting company, with about 1,200 radio stations, filed papers with the FCC indicating it will bid on just one license - for a station in rural Manson, Iowa.
>
> LUK Broadcasting LLC, owned by the behemoth holding company Leucadia National Corp., which earlier this year said it wanted to buy all of MCI Corp.'s outstanding stock, will bid on up to 286 licenses.
>
> Individual investors and radio junkies also will participate in the auction.
> "There are �bidders� who are literally people off the street," said Todd Stansbury, a lawyer in the media group at Wiley, Rein and Fielding, a firm in the District.
>
> He predicted the unprecedented interest in new FM stations will make the licenses costly.
>
> "Given the fact that we've not seen an auction for five years, I would expect people to be willing to pay. The interesting part to me will be how much people are willing to pay," Mr. Stansbury said.
>
> The 1999 auction raised $57.8 million. This year's auction could raise

```
> hundreds of millions of dollars.
>
> Each license goes to the highest bidder. Companies participating in the
> auction had to pay a percentage of the value of a license on which they
> want
> to bid before the auction, and the FCC has nearly $81 million in upfront
> money. LUK Broadcasting has put up $10.8 million.
>
> The FCC is holding the auction now because of demand for new radio
> stations.
> There are 6,218 commercial FM stations, but many towns and small cities
> are
> without their own broadcaster.
>
> People have asked for stations in these 288 towns and cities because none
> is
> home to a licensed station, even though they are within range of other
> broadcasters, said Peter Doyle, chief of the audio division of the FCC's
> Media Bureau.
>
> Towns throughout the Midwest, West and South are getting most of the new
> commercial FM radio stations. There are 28 licenses available for stations
> in Texas, 20 in Colorado, 18 in Montana and 17 in Wyoming.
>
> The license for a station in Nassawadox is the only one available in
> Virginia, and no licenses are available for new stations in Maryland or
> the
> District.
>
> The signal strength of the stations, which could open within three years,
> will vary from 3,000 watts to 100,000 watts, based on the classification
> the
> FCC has attached to each license.
>
> Mr. Smithwick and his business partner, Arthur Belendiuk, aren't thinking
> about the type of station they want to start. They simply want to obtain a
> license to broadcast.
>
> "We're pretty flexible. Will we play country music? I don't know. I don't
> care. What you do first is get authorization," he said.

The Swiss Radio International broadcast station has stopped using short waves and its transmitters and antennas are being decommissioned. Members of the HB9MM  http://www.hb9mm.com/Index_e.htmclub  station in Lausanne have been given permission to use the former broadcast station facilities and antennas, including a 62-metre high curtain array weighing 135 tonnes. The special callsign HE3RSI is on the air now until 3 December on bands from 40 to 10 metres. This is the first time the HE3 prefix has been used.

BBC World Service is now available for the first time on FM for listeners in Bethlehem, Jerusalem and the West Bank.

New partner station, Radio Bethlehem 2000 on 89.6FM will soon be airing 12 hours a day of BBC programming, in Arabic and English.

The BBC Arabic service has over 13.5 million listeners in the Middle East and North Africa.

In addition to short wave and medium wave, the BBC Arabic Service is already available on FM in Bahrain, Iraq, Jordan, Kuwait, Qatar, Sudan and UAE.

Head of BBC Africa and Middle East Region Jerry Timmins welcomed the partnership with Radio Bethlehem 2000: "We are very pleased to have reached agreement with Radio Bethlehem 2000.

"On the day that Yasser Arafat died, listeners in Bethlehem and across the West Bank area have been able to hear the news unfold from Ramallah to Paris and Cairo, live from the BBC.

We continue to be intent on serving our listeners with programming which is in the very best traditions of the BBC."

Religious radio station Solas AM have handed their licence back to the BCI. The station were awarded a licence to broadcast to Dublin on medium wave in April 2001 but have not managed to get on air.

The station cites prohibitive expenses involved in AM broadcasting when compared to FM. They also are unhappy that they have not been given the option to take a licence for FM broadcasting.
Solas AM ran in to many difficulties in their attempts to get on air. They had claimed as recently as last July that they were not yet ready to call it a day.

Amateur Radio Newsline™ Report 1422   November 12, 2004

Amateur Radio Newsline report number 1422 with a release date of Friday, November 12, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T.  The FCC turns off the ham radio licensing computer and a big Aurora opening hits North America. Find out the details on Amateur Radio Newsline report number 1422 coming your way right now.

(Billboard Cart Here)

**

WITH THE FCC:  HAM RADIO LICENSING STOPS AND STARTS DUE TO COMPUTER GLICH

Ham radio licensing came to a screeching halt on November 5th.  This after a software glitch caused the computer that issues licenses to do some very strange things.  Mark Abramovich, NT3V, has been following the developments from Philadelphia and gas more:

--

The FCC isn't offering any official comment on exactly what happened. But Amateur Radio Newsline has learned that the problems with the Universal Licensing System computer started after an Oct. 28 software upgrade installed by a government contractor.

The problems that followed prompted the FCC to order a five-day shutdown of the system which issues Amateur Radio licenses. The system came back on-line on Nov. 10. However, as of our deadline for this week's program, the FCC still planned a weekend shutdown of the

U-L-S for maintenance and expected it to return to operation on Nov. 15.

The American Radio Relay League's Volunteer Examiner Coordinator Bart Jahnke, W9JJ, tells Amateur Radio Newsline he was among the first to detect problems while doing a routine check up on the application of a friend near the end of last month.

Jahnke says he discovered the application was - as he describes it - flagged or marked pending by the
FCC for a review by a live person. He says the automated system and its software are set up for minimal human intervention. Jahnke says such a classification immediately raised concerns that something had gone wrong.

Jahnke tells me once he called his contact at the FCC to report the problem, he was told the computer contractor would be notified to investigate.

A couple days later, Jahnke says he was told the problem was fixed. But, as Jahnke tells me, he checked and found that the computer problem had gotten worse. He says he and other VECs were finding the U-L-S had begun issuing Group D call signs - the 2 X 3 ones - to new licensees out of sequence. He says only the first and third call-district applications somehow escaped getting caught up in the problem.

At that point, Jahnke tells Amateur Radio Newsline he and other VECs called the FCC. He says the commission told the contractor to pull the plug on the system on Nov. 5, run some diagnostics and fix it. A message posted on the FCC's website on Nov. 5 said simply: "The granting of Amateur applications has been temporarily suspended. We apologize for the inconvenience."

Prospective hams who had passed VE exams earlier and were awaiting their call sign were getting nervous. Some who received the out-of-sequence call signs were wondering whether the call signs were OK to use. A few had even received a second call sign, cancelling the first. In all, Jahnke says about 130 licensees were affected and thousands of license applications were backed up in the system.

By Nov. 10, Jahnke says the FCC began issuing letters cancelling the out-of-sequence call signs and awarding the proper call signs to new licensees. For some, he says it was their third call sign in a matter of days.

Jahnke says the FCC deserves credit for responding as fast as it did. He also has praise for the other VECs across the country who were in touch the with FCC, too. Jahnke says he's crossing his fingers and hoping the planned weekend maintenance of the FCC U-L-S computer, won't undo the system fix.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

More on this situation in future Amateur Radio Newsline reports. (ARNewsline(tm), NT3V with input from FCC and ARRL)

**

UNEXPECTED VHF DX:  THE BIG AURORA OPENING OF NOVEMBER 7

--

N6ZE:  "The aurora was very bright most of the time and the magnetic bearing from the airplane extended from 300 degress through about 060 or 070.  We saw this for about 3 hours and a distance of probably 1900 statute miles."

---

That's Pete Heins, N6ZE, describing last Sunday night and early Monday's magnificent Aurora from his vantage point in the right seat of a Boeing 757 jetliner.  Pete was the co-pilot that night, flying from Los Angeles to New York's J-F-K International airport.

--

N6ZE: "At no time was the visability obscured by clouds, and for about the last 1 hour of the flight we did have about a 1/4 moon in the Eastern sky climbing, and we were still able to see the AU."

--

And while Pete was making his way across country, hams on the ground were sitting on 6 meters, 2 meters and all the bands above. And some like Dave Bernhardt, N7DB, in Boring, Oregon were hearing and working stations all over the place. Dave primarily operated 2 meters where according to the V-H-F reflector he worked W7IUV, K7XC, K7GS, WA6KLK and VE7DXG to name only a few. And Dave was not alone.

On the other side of the country, Jeff Klein, K1TEO, in Trumbull, Connecticut reports making Aurora propagation contacts on 2 Meters as far south as Alabama and Tennessee. To the west Jeff worked stations in Missouri, Iowa and Minnesota.

According to reports from NASA, the Auroral opening was caused by a Coronal Mass Ejection or C-M-E on the Sun. That event happened late on Friday, November 5th with the ionized particles reaching our Earth late on Sunday. Television news programs on Monday night showed pictures of this very bright Aurora as far South as Minnesota and northern Kansas.

On Tuesday the 9th two more solar shocks have arrived. Paul Kelly, N1BUG, in Milo, New Hampshire reported them on the VHF Reflector. The first hit just after 09:00 UTC but did not contain favorable magnetic field vectors or strength to produce Aurora at North American mid-latitudes. The second, arriving near 18:20 U-T-C did produce the classic Aurora buzzing. He later describe this event comig just in time for the natural late afternoon peak for auroral backscatter. He says that the Aurora came up fast and suddenly 2 meters filled with strong buzzing signals. He says over the reflector that he worked as far South as grid square E M 66.

And while hams who only operate the high frequency bands were complaining that 80 through 10 meter propagation had literally disappeared, those like N1BUG, N7DB and K1TEO on 6 meters, 2 meters and above were calling C-Q Aurora and making lots of contacts. All that is except Pete Heins, N6ZE, who landed his big silver bird at New York's J-F-K airport just as the sun was coming up. Then again, you have to admit that sitting at 37,000 feet on the flight deck of a 757, Pete probably had the best view of all. (ARNewsline(tm), N6ZE, VHF Reflector)

**

MORE ON PROPAGATION: WWW.HFRADIO.ORG/PROPAGATION

By the way, Dick Mannheimer, K6LAE, who was one of the first to alert us to the Aurora also passes along information on an excellent propagation website. Its in cyberspace at www.hfradio.org/propagation.html

The site is operated by Thomas Hood, NW7US. If the name and call sign sound familiar its because this is the same Thomas Hood who writes propagation columns for CQ, CQ VHF, Popular Communications and Monitoring Times magazines.

We have looked at the site. It's well worth bookmarking on your web browser. Again the URL is www.hfradio.org/propagation.html (K6LAE)

HELPING HAMS: UNITED WAY REPORTS HUGE HAM RADIO RESPONSE TO ARRL HOLIDAY TOY DRIVE

The United Way in Martin County, Florida, reports "a huge response" by the Amateur Radio community. This, to the ARRL's call to support a toy drive on behalf of the agency's "White Doves Holiday Project."

According to the ARRL Letter, Carol Hodnett, who directs the United Way of Martin County's Volunteer and Community Resource Center says League members from Maine to California have sent toys or money, and more is arriving every day. The League hopes to provide toys for youngsters left homeless or displaced by a string of hurricanes that hit the region earlier this year.

There is still time for you to take part in this very worthwhile project. All you need do is to purchase an unwrapped toy for a boy or girl aged 1 to 14. Please send it prior to Thanksgiving, Thursday, November 25th. Be sure to include a QSL card or 3x5 card displaying your call sign.  Mail it to Ham Radio, The United Way White Dove  Project, 50 Kindred St, Suite 207, Stuart, FL 34994.

In our view this is Amateur Radio at its very best.  Hams helping kids in a true time of need.  (ARRL)

**

ENFORCEMENT:  ARE YOU THIS PERSON?

An FCC license holder who is likely a ham is being asked by the agency if he is the same person convicted of a number of criminal acts.  And the agency has an important reason for asking.  Spokesman Daryl Duckworth, NN0W, explains:

--

Duckworth: "Regarding qualifications to remain a licensee, in inquiry concerning criminal convictions for theft by deception and theft by failure to make required disposition of funds as the result of an investment scam went to a licensee in Johnstown, Pennsylvania."

--

According to the FCC release, the person involved is also under investigation by Pennsylvania Administrative Office of the Courts for a possible indecent assault.  This is alleged to have been committed on July 30th, 2002.

The purpose of the probe is to determine if the person contacted is the same one as in the alleged and proven criminal cases.  For that reason the FCC has withheld the persons identity or any other factual material to indicate whom he or she might be.

But if its the right person, he or she was given two options by the agency.  The person can provide additional information on the convictions and charges for consideration by the Commission. Alternately, he or she can voluntarily submit a license for cancellation in order to avoid a hearing on the issue.  (FCC, RAIN)

**

ENFOECEMENT:  YOU CAN'T SELL THAT BEACON

Still with enforcement news, word that ACR Electronics, Inc. of Fort Lauderdale, Florida, has been fined $75,000.  This, for marketing a personal location beacon to the general public that had not been approved by the Commission.

Now here's the ironic part?  The CGC Communicator reports that some of the material submitted to the FCC by ACR helped make the case against the company.

It's all on line at
http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-253871A1.doc
and   http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-04-259A1.doc  (CGC)

**

ENFORCEMENT:  POWER - LESS POWER CAPTAIN

An unlicensed broadcaster's response to an FCC Notice of Violation has helped to clinch a $10,000 fine issued against him.   Amateur Radio Newsline's Bill Pasternak, WA6ITF, has the details.

--

Well, the details really speak for themselves and we would be hard put to say it better than David Michael Oaks.  Oaks is the one who received the $10,000 fine for allegedly operating an FM station at his residence in Beaverton, Oregon.  This, without the benefit oof holding a valid license to do so.

Quoting from the FCC report and order affirming the fine, the agency says that in responding, Oaks did not deny the charge.  Rather, he stated that he was attempting to correct the violation by lowering the power each time he received a notice that he was operating an unlicensed station.

But that's not all.  The FCC goes on to say that Oaks asserted that the investigating agent told him that the effective range for a transmitter operating pursuant to Part 15 of the Rules is about 100 feet. Also, that if Oaks chose to do so, he could purchase a Part 15 certified wireless microphone to compare the range of that signal with that of his station.

Oaks did not choose to do so. Nor did he refrain from operating after receiving several written warnings. Based on all of this evidence, the FCC says that the $10,000 fine will stand.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in Los Angeles

--

More on this case is on line at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-04-3504A1.doc (FCC)

RESCUE RADIO: PROPOSED RADIO JAMMING SYSTEM DROPPED FOR THE MOMENT

Some good news and some bad about an emergency information system proposed by Alert Devices International Corporation. The company has requested that the FCC to dismiss its Petition for Rule Making to create an Emergency Vehicle Signaling Service. This is the previously described service that would allow emergency vehicles to jam out authorized broadcast stations and replace them with emergency warning messages designed to attract the attention of affected motorists.

The good news is that the FCC has granted A-D-I's dismissal request. The bad news is that ADI - according to its latest filing - proposes to submit an "expanded version" of its Petition in the near future. Its all on the web at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-04-3521A1.doc (CGC)

MORE POWER CAPTAIN: ELECTRICAL INDUSTRY CHASTISED FOR 2003 BLACKOUT

Those wonderful people that are now bringing you BPL have bigger problems to worry about.  This after Federal regulators issue a scathing review of the electricity industry's voluntary efforts to make their power grids more reliable.

The report comes about a year after nation's worst blackout that hit on August 14th of 2003.  According to staff at the Federal Energy Regulatory Commission, power industry audits play down shortcomings of the grid system, rely on ambiguous standards that often are ignored and reflect vast differences between the best and the worst performers.

But the agency's chairman Pat Wood did say that there have been improvements since the blackout that was caused by power line problems in Ohio and affected eight states from Michigan to New York as well as parts of Canada.  (Published reports)

## IN PRINT:  ALL ABOUT TONE

And with more and more repeaters implementing some form of tone access, it is C-Q Magazine that's taking the lead in explaining how it works to the ham community.  In his three page article in the November issue, writer Dave Ingram, K4TWJ, "How It Works" column traces the use of tone access and explains why it can be far more of a friend to hams than a way to keep them off a system they may want to try.  You can read what Dave has to say in the November C-Q on newsstands right now.  More information is on the web at www.cq-amateur.radio.com  (CQ)

**

## ON THE WEB:  QRZ.COM NEEDS YOU

The giant Q-R-Zed dot com website says it needs some volunteers to help it better serve the needs of the world wide ham radio community.  According to its owner Fred Lloyd, AA7BQ, the popularity has resulted in a need to enlist a few more volunteers to help out on the website operations.

Lloyd says that Q-R-Zed currently has openings for two types of volunteers,.  These are board Moderators and Callsign Database Administrators.  An explanation of the responsibilities of each is on line at the Q-R-Zed site.  Its in cyberspace at www.qrz.com.

CHANGING OF THE GUARD: SHIRLEY WILKERSON JR. W4TBU S.K.

Some sad news to report. Word that Elmer Extraordinary, Shirley Wilkerson, Jr., W4TBU, died on Monday, November 8th. As reported last week, Wilkerson was 84 years old and had been hospitalized in declining health.

According to Tom Webb, W4YOK, Wilkerson was licensed in 1950 and was a one-time member of QCWA with his story featured in the winter 2003 edition of the Q-C-W-A Journal. He is survived by a sister. (W4YOK)

TELECOMMUNICATIONS SECUREТY: PASSCODE FROM AMERICA ONLINE

Turning to the high tech page, America Online says that it will begin offering members a security device and service that has been used to safeguard business computer networks. This after parent company Time Warner Inc. announces that its AOL unit has signed a deal with Internet security company RSA Security Inc., to launch its new AOL PassCode.

Using an ever changing algorithm, the system is designed to add an additional layer of protection to member accounts. PassCode users will be provided with a small handheld six-digit numeric code key which refresh on the device every 60 seconds. To log onto an AOL account equipped with the service, users will have to type in the six-digits in addition to their regular password.

The price of the code-key device will be $9.95.  Service costs will range from $1.95 to $4.95 per month.  This, in addition to the usual America Online subscription fee.  (AOL, published reports)

**

## EMERGING TECHNOLOGY:  FALSING CALLER ID

The Washington Post reports that a new technology can trick U.S. caller-ID services into displaying someone else's name and telephone number. The Web-based systems make the name and number appear in a call recipient's caller-ID box.

A company called Star38 that launched in September with plans to market to debt collectors has changed its strategy after consumers complained. Star38 admitted the approach was "flawed," and now says it will market their system to law enforcement agencies.

New Jersey-based Camophone says it will perform the service on a call-by-call basis for a fee of $5 and up.  The company said it recognizes that the service could be abused but insists its intent is to help customers protect their privacy.

But consumers worry that the technology could be used by stalkers and debt-collection agencies, some consumers worry.  The Direct Marketing Association said masking a marketer's identity is illegal under rules enforced by the Federal Trade Commission and the Federal Communications Commission.  (Washington Post)

## HAM RADIO IN SPACE:  AO-51 E-MAIL REQUEST BOX

AMSAT North America has announced the establishment of an E-mail address for AO-51 users to submit requests and ideas for Experimenters Wednesday operations.   AMSAT says that this is a chance for the ham community that uses AO-51 to request the modes that they are interested in* seeing operated on during the weekly Wednesday times.  All input will be noted but do not expect a reply to your E-mail.  Send your requests or ideas to ao51-modes@amsat.org (AMSAT-NA)

WORLDBEAT:  VE3PU NEW TREASURER OF RAC

Back here on mother Earth, word from Radio Amateurs of Canada that Ken Pulfer,  VE3PU has been appointed to the position of Treasurer. Pulfer will complete the unexpired term of Eric Ferguson VE3CR who recently resigned.

This is not Pulfer's first time in the job.  He has served as R-A-C Treasurer in the past, and brings a wealth of experience to the position.  (RAC)

**

WORLDBEAT - UK:  FINAL G5RV LOGBOOK RETRIEVED FROM EBAY

Meantime, word from the United Kingdom that the final log book of one of the worlds best-known radio amateurs has been saved for posterity.  This, after it was put up for auction on eBay.

The late Louis Varney, G5RV, of G5RV antenna fame was one of the founding members of the Chelmsford Amateur Radio Society in 1936.  So when Chelmsford club member Duncan Munro, M0KGK spotted that G5RV's last ever logbook was being auctioned, the club decided to buy it.

Munro did the bidding.  Despite fierce competition he managed to secure the logbook in the last eight seconds of auction.

The logbook shows that G5RV's final QSO's took place on the 11th January 2000 and were , appropriately enough recorded on page 73 of the logbook.  The stations contacted were Ron Glover, G0WGP, in West Sussix and club President Harry Heap, G5HF, in Chelmsford.  Louis was, of course, using his famed G5RV antenna for all of the contacts.  (GB2RS)

**

DX

In D-X, word that W-6-S-J, will be on the air from the Bahamas as C6AWS from November 26th through December 2nd. Activity will include a Single-Op/All-Band/Low-Power entry in the CQ World Wide DX CW Contest. During non-contest periods, he will concentrate on the WARC bands. QSL to his home call. (OPDX)

And Look for 7Q7LA back on the air from Malawi in a few weeks. This, as G0IAS, updates the OPDX that he is hand carrying some ham gear for Ron to be sure that it arrives safe and sound. G0IAS will leave the U-K on the 28th of this month and is expected to arrive at the Lakeshore on the 30th. The confirmation route for 7Q7LA remains direct to G0IAS. There is no QSL bureau in Malawi. (OPDX)

**

THAT FINAL ITEM: UK HAMS ON THE AIR WITH EXPANDED 40 METER PRIVELEGES

And finally this week, hams in the U-K have taken to the airwaves with their recently expanded privileges. RSGB Newsreader Jeramy Boot, G4NJH, is where it all took place:

--

UK radio amateurs gained access to new frequencies between 7.1 and 7.2MHz from 31st October.
After dark, the band between 7.1 and 7.2MHz is still full of powerful broadcast stations, although some clear frequencies can be found.

The band became available on the second day of the CQ World Wide DX Phone Contest. Many UK stations took advantage of the new band by making contest QSOs with stations in the USA on their own frequency, instead of having to work 'split' as had been the case when contacting North America on 40 metres SSB.

During the daytime, numerous UK stations are now able to have virtually interference-free inter-G contacts above 7.1mhz.

The new band is available to radio amateurs on a Secondary, non-interference, basis until 2009. After the end of March 2009, the broadcast stations should move to other frequencies and 7.1 to 7.2MHz will then become an amateur Primary band.

Jeremy Boot, G4NJH, in Nottingham.

--

Amateurs in the Republic of Ireland were also granted access to 7.1 to 7.2 MHz towards the end of October, joining those in Croatia, Norway and San Marino who already had access to these frequencies. Hams in Switzerland will also gain access to 7.1 to 7.2MHz from 1st January 2005. (GB2RS)

WFCR(FM), Public Radio for Western New England, has begun IBOC operation. In a ceremony Wednesday, long-time donors Joseph and Dorothy Gavin of Amherst, Mass. turned on the HD Radio transmitter atop Mount Lincoln in Pelham.

The Gavins are early lead donors to a capital campaign for a new facility. Mr. Gavin for many years worked as an engineer at Grumman Corporation, where he oversaw the design, testing and manufacture of 12 Apollo Lunar Modules. Dorothy Gavin is an alumna of the University of Massachusetts, the licensee of WCFR.

WFCR GM Martin Miller said, "Digital technology promises to significantly increase the quality and scope of program services the station offers to its listeners. For now, we will be broadcasting our normal programming in digital, but, in the future, we will be able to provide data in addition to sound, or broadcast a second program stream on our assigned frequency."

This is good news for AM band Dxers !!!

Just came back from the start-up of the new 10 kW output Radio Progreso relay at the Isle of Youth, south of Cuba.

The frequency is 730 kHz , and the transmitter is rather close to the Caribbean sea, so the 100 meter high TUNIPOLE antenna with 120 radials should be well heard via sky wave during the evenings.

The transmitter is pulse width modulated technology and capable of  125 percent positive peak modulation...

Send your QSL requests if you are able to pick up the new Radio Progreso relay to :
arnie@rhc.cu

I will relay them to Progreso's deputy chief engineer , as we both work in the same
building.

Other Radio Progreso's relays are 900 kiloHertz now in San German with 25 kW PWM transmitter 660 kiloHertz in Santa Clara with 10 kW PWM transmitter and 690
Jovellanos with 12.5 kW PWM also.

73 and good winter AM broadcast band DX season to all

Arnie Coro

CO2KK

Dear Public,Periodically we hear concerns from you on how we run our radio and TV stations, the formats we choose and the impact to you as we switch formats from ones that have devoted listeners and respect in the community too their formats.  As we wipe from the face of the earth stations such as KZEW in Dallas, KLOL in Houston, etc. we must point out that there are important business reasons for our decisions.  While we graciously accept the gift of broadcasting frequencies from the public and we do feel some concern for the public's desires, off the record social responsibility is a distant second to the almighty dollar.  This should be no surprise to you as you watch publicly funded stations such as public radio and public TV crank out quality, socially responsible programming while the for-profit stations crank out the most controversial,heart-stopping, sin-revealing programming they can produce that will quickly amass broad viewers. This is what the advertisers want and they pay our salaries and the returns to our investors.  While we're talking about it,reality TV is just the surface.  As we continue to get more creative you will see more programming that pushes the envelope so close with the FCC it makes them crazy and turns off more segments of the population.  But if we can get the masses to tune in because they're curious about what sick things we've dreamed up, the advertisers will pay and we'll do it.  Do you think we enjoy creating programming where people eat bugs on TV and we depict the average housewife as a conniving cheat? We have families too, folks.We also realize the recessive feel that our actions have also.  But folks,as you move to the public-funded programming such as XM Radio and HBO, you pay for what you want and you get it.  Those that can't pay for it, get what we send them. Are you still curious why we are wiping stations that appeal to the upper middle class white male and replacing them with something for the Spanish-speaking immigrant?Now that you understand the problem better, we need your help.  We need you to stop watching and listening to our stations so that our rating numbers will go down and we will be able to convince our advertisers and investors that a new Latina dance station is not what we need.  So turn that dial,don't buy from our advertisers and for heavens sake, if Arbitron calls you,tell them you don't listen to any of our programming.  Tell them you've switched to XM, Sirius, HBO or anything else.  Tell them you burned your broadcast TV antenna in effigy and that you held a local FM radio burning party.  We implore you to take action now.

Thank you,
The Broadcasters of America

CBC and Pacifica are far from Unbiased News sources.
They are as left biased as CBN is to the Right.

Sinclair is doing nothing worse then the hatchet job CBS tried to do with the False Documents or the continual biased news coverage of ABC and NBC.

Yeah, yeah, yeah....spoken as yet another voice, so convinced of their correctness that there's no need to hear the whole story.

> Dear Public,Periodically we hear concerns from you on how we run our radio
> and TV stations, the formats we choose and the impact to you as we switch
> formats from ones that have devoted listeners and respect in the
> community too their formats.

Formats are switched when the old one does not have listeners or revenue.
Your argument fils on this fact alone.

> As we wipe from the face of the earth
> stations such as KZEW in Dallas, KLOL in Houston, etc. we must point out
> that there are important business reasons for our decisions.

Yes. KLOL ws declining in revenue and audience. Houston, in ages 12 through 35, is now over 60% ethnic. Hispanic population has increased by 100% in just 15 years.

> While we
> graciously accept the gift of broadcasting frequencies from the public and

Serving an audience, any audience, is following the wishes of the public. I can see the argument coming... it is more noble to serve whites than other groups... I can smell a racist a mile off.

>  This should be

Always true. Popular entertainment beats cultural entertainment. True today nd true at the dawn of radio, true in the vaudeville era, too.

>This is what the advertisers want
> and they pay our salaries and the returns to our investors.  While we're

Advertisers are looking for bodies, not IQs.

> Do you think we enjoy creating programming where people
> eat bugs on TV and we depict the average housewife as a conniving cheat?

Let's see... on the Honeymooners, Ralph demeaned women. The socially unacceptble is always fair game for humor. Look at All In The Family for another exmple.

> We have families too, folks.We also realize the recessive feel that our

I told you this was coming. Somehow, Hispanics are less entitled to service than whites. This reeks of Animal Farm. "All listeners are equal, but some listeners re more equal than others." Go paint it on your barn.

Oh, and KLOL's new encrnation is aimed at non-Spanish speaking Hispanics. It is an Hispanic staiton, but not a Spanish station. It is imed at second and third generation Hispanics, who are not immigrants. But that does not help your rcist little agenda, does it?

>Now that

Arbitron does not take udience data on the phone.

I received this from the station:

Thank you for your inquiry.

On November 1, 2004 KNOW Radio was launched; broadcasting commercial free Christian music worldwide 24 hours a day, seven days a week over the internet.

Founded on the principle of spreading the message of Our Lord and Savior through music and scripture; KNOW Radio has already proven to be a success with hundreds of listeners tuning in.

The goal of KNOW Radio is to be the premier Christian Internet Broadcaster by maintaining the commercial free approach and incorporating other features such as Christian News, messages, sermons and church services.

KNOW Radio utilizes a state-of-the-art digital broadcast solution to deliver near CD quality sound by using the most advanced streaming encoders.

Additional features include advanced playlist rotation logic, automated song requests and a custom web interface to enhance the listeners experience by providing them with Artist, Title, Album, Cover art and other information on songs being played.  Listeners are also provided a link where they can purchase the CD from major internet stores like Amazon or directly from the Artist's web site.

We accept and promote only Christian songs, mainly of the Rock, Pop, Acoustic, Country, Alternative, and Praise & Worship genres. To have a good idea of what kind of Christian music we're looking for, simply tune in!
http://www.knowingyou.org

To submit recordings for consideration and promotion, please send your CDs to:
Shaun L. Ettinger
KNOW Radio
604 Sheridan Rd 2W
Evanston IL  60202

For additional information or questions please email us at broadcast@knowingyou.org or the above address.

I look forward to working with you.

Blessings,

Pastor Shaun L. Ettinger
CEO/General Manager
KNOW Radio

The response to "Teenage Kicks" has been overwhelming and there is now a number of venues, promoters and artists supporting the idea of celebrating John Peel's legacy all around Scotland with more coming in daily.  The main shows in Glasgow, Inverness and Edinburgh will see the best new Scottish bands play 20 minutes of Peel approved covers. Full details are below.

The Glasgow "Teenage Kicks" gig is at The Revue Bar Glasgow Barrowland Ballroom 8-2 Thu 19 Aug 2004.
The Edinburgh "Teenage Kicks" gig is at The Subway 7-12 18 Nov 04 .
The Inverness "Teenage Kicks" gig is at Madhatters 8-12 Sat 20 Nov 04.
"Teenage Kicks Part 2" will happen again on Sun 21 Nov 04 at Glasgow

Barfly with a different line-up , due to over 60 bands wanting to get involved.

All gigs �4/5 on the Door

We are still encouraging every artist, band, promoter or venue to raise a glass to John Peel over the CiN weekend and either collect monies for CiN or encourage your audience to. If you do collect money hand it in to the nearest BBC reception and text a total to 0780 375 2913
Full details of the venues that will be taking part or allowing collections will be added as they are confirmed and feature in the Gig listings of www.nemis.org

There is a cool tribute from Snow Patrol's website here http://www.snowpatrol.net/Teenage_Kicks_Acoustic.mp3 and I would be grateful if you can give this event maximum support by passing this email to music fans.

Thanx AD

I saw the same complaints right here in RRB/Airwaves in 1999 when Radio One bought WENZ/107.9 in Cleveland and flipped it to hip-hop. Some people complained. In fact, I was one of the people who enjoyed the format, but there weren't enough of us. Clear Channel, it is said, only kept the station at alternative because its sister station at the time (WNCX/98.5, classic rocker, sold to Infinity in the same deal that sent WENZ and WERE/1300 to Radio One) was pulling down great numbers, and they could afford to... not care too much if WENZ wasn't doing well.

Fact is, Cleveland's population is now primarily Black and Hispanic. There was -- IS -- a huge market for the genre of music Radio One put on the air. (I'm actually surprised we don't have any Spanish-language radio stations in Cleveland yet, but... maybe we do, it's been well over a year since I moved out of Northeast Ohio.)

Is Radio One failing to serve the public? Hell, no... they're serving a different chunk of the public, that's all. IMHO it was a very smart move on their part.

Probably - the smaller stations probably still have one, and the newer ones may have it as a backup if they still maintain an analog program STL feed.

> Can it be used for recording...?

Why would you want to?

> Ruff....value these days....?

Tell you what...if you have one, and $200 to go with it, I'll take it off your hands.

> Thanks..........Mike

Sure.  Sorry to abuse your curiosity, but these boxes are some 10-20 years old, and they're really designed as the final link in a broadcast audio chain.  Good in their day, today's technology (DSP, mostly) has far outstripped the previously-novel way that this machine dealt with clipping and compression artifacts.

For your information, two of the newsgroups you are cross-posting to (alt.radio.family, and us.misc.family-radio) have NOTHING to do with broadcast radio - they are associated with the FAMILY RADIO SERVICE (FRS) radios (little walkie-talkies) that you can buy at Wal-Mart, and the like. Nobody here is going to be interested in these kinds of posts, so I would suggest you stop cross-posting to those two groups.

Thank you for your attention in this matter.

They were made between 1975 and 1980, so they are actually between 24 and 29
years old.

There was a recording studio version made called the 418A that used the 8000's
audio processing but with user-selectable pre-emphasis and no low-pass filters
or clippers. It can be useful as a vocal limiter.

In general, these units will require replacement of the electrolytic
capacitors in the power supply, particularly the ones located close to the
power regulator transistor heat sinks. If this is done periodically, they seem
to be more or less immortal.

Keep in mind that garnishing bank accounts is only one method of collecting
judgements.  Garnishing wages, placing liens on property and foreclosures
are others.

For sale:

(The "Radio Crazy" is baaaaaakkkk!!!!)Hi!

Partial interest in AM daytimer in Alabama. 1,000 watts, non-directional. City of about 11,000.

This is a joint venture. There is an element of risk. You could lose all or part of your investment.

Active or inactive investors with at least $5,000 each are welcome. No individual may own over 49 percent interest. This means me too!

The full asking price for the station is either $55,000 cash or $75,000 with $10,000 down, seller financing. No real estate is included.

Station is on the air since 1974.

Tel: (478)741-1710 in Macon, GA. Please....No "AM bashers" or other negative nabobs!

73,

Meyer Gottesman, W6GIV
aka The "Radio Crazy"
aka Moron Gottesman
aka Moronic Gottesman
aka Maven Gottesman.

Realistically there is no way to avoid a court-ordered fine without going to
jail or columbia.

I thought the FM station was owned by some university out there;
the last time I tuned in to the AM, which was a while ago, the AM

side (recently owned by the Catholic church) had been sold and
was running some kind of big band format.

November 18, 2004
By Paul Heine

Scores girls, decked out in Sirius halter-tops, shaking their stuff on stage, hoisting signs proclaiming "Howard Stern-only on Sirius."

An adoring crowd of several thousand Howard Stern fans carrying signs of their own-some homemade, most handed out by Sirius staffers.

A loud sound system pumping out the tunes and Sirius promos.

Howard Stern's noontime appearance in New York's Union Square today felt like a rock concert and a political rally rolled into one.

"Are you ready to get Sirius?" Artie Lange asked the pumped-up crowd, before bringing out the rest of the Stern cast. "Hey now," said Stern, walking on to the stage just before noon. "I wonder what the FCC thinks of this."

Stern's brief spiel was pure Barnum & Bailey-style promotion. He called Sirius the future of radio and said it had re-energized him. He took shots at the FCC and XM. "Once we can give you the show without FCC interference, we will once again have the greatest show in radio," he promised.

Stern told the crowd he was ready to leave radio after his current contract expires, and he told his bosses at Infinity so. Then conversations with Sirius began.

"I thought I was burned out on radio, I thought it was over. but now I'm rejuvenated," he said.

Then came Stern's strongest words: "It's the death of FM radio, the death of the FCC. They have ruined commercial broadcasting."

Stern claimed credit for inventing "a different kind of radio" when his show took off in the '80s. "And the FCC dismantled it."

After plugging his new radio home from the stage, Stern descended into the crowd to grip and grin. 500 or so listeners that got to Union Square early, including some whack pack regulars, were personally handed Sirius boomboxes and a certificate for a one-year subscription by Stern. The rest of the crowd received certificates for a free Sirius radio, "when you prepay for a one-year subscription by Nov. 24."

The Stern-Sirius media campaign continues tonight with an appearance on Late Night With David Letterman.

WEEKS AND HAVE NO AOL THERE. SOME ONE ELSE NEED TO TAKE OVER DOING JOB. IT BEEN
LOTS OF FUN.

MR. RADIONEWS

Amateur Radio Newsline™ Report 1423   November 19, 2004

Amateur Radio Newsline report number 1423 with a release date of Friday, November 19, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T.  Ham radio in California says goodbye to the Tournament of Roses Parade and W7DXX speaks out on his Internet controlled remote base in Baghdad.  And its not the first time.  Find out the details on Amateur Radio Newsline report number 1423 coming your way right now.

(Billboard Cart Here)

**

PUBLIC SERVICE:  HAMS QUIT TOURNAMENT OF ROSES PARADE - LIMIT SERVICE TO ATV

Ham radio will not be a major part of the 2005 Tournament of Roses Parade. Amateur Radio Newsline's Norm Seeley, KI7UP has the rest of the story:

--

Although it was never officially part of the Tournament of Roses, ham radio has been providing a communications link along the Rose Parade route for more than 40 years. And long before there was any official group, people like Tom O'Hara, W6ORG, of P-C Electronics were the early pioneers:

--

O'Hara:  "I first got involved with the Rose Parade communications
when I was one of the Emergency Coordinators for Pasadena.  They asked us ti help out with some longer range stuff than what the CB operators were doing.  This was in the middle 1960's."

--

Using video cameras and Amateur television, the ham radio volunteers were ever alert for any kind of an emergency situation that might develop. If they spotted something they would send their pictures back to the parade coordinator who could then take the necessary action.

--

O'Hara: "Later on they added more and more ATV and more and more hams. At one time I think there were 17 camera positions."

--

Amateur Radio literally pioneered the use of closed circuit television for coordinating large scale events in the Tournament of Roses Parade. At one time hams even had Amateur Television transmitters sending back pictures from helicopters flying overhead. And they did this long before most television stations had camera equipped news choppers of their own.

--

O Hara: "Got involved with the helicopter with the first ATV in 1968. Put it in the Sheriff's helicopter. And when I got my own helicopter I put it in and flew around one year."

--

As the parade grew, so did the Amateur Radio communications effort. By the 1970's TORRA had unofficially been formed. TORRA stands for Tournament of Roses Radio Amateurs and in the 1980's the hams involved formalized as a club and with this came the golden days of ham radio supporting the parade.

Today TORRA has more than 300 active members who regularly volunteer their time. At least that's the way it had been until an incident occurred last year. That's when an incident took place that apparently caused things to go sour.

According to an article in the Pasadena Star News, a pair of ham radio operators were carrying equipment onto the grounds of Tournament House in preparation for the last parade. They were stopped by a senior Tournament official and their presence challenged. The unnamed official even went so far as to accuse the ham radio volunteers of lying to get on the grounds.

Now enter Nextel. The same Nextel that has patented the words push-to-talk.

Nextel is a corporate sponsor of the 2005 parade, and reportedly has donated a number of phones to the event. This means that most Tournament of Roses officials will have a Nextel phone with direct walkie-talkie service in their pockets.

Bill Flinn is the Tournament's chief operating officer. Talking about Amateur Radio's departure he was quoted by Pasadena Star News as saying: "I think it's come to the end of a run. We are sorry to see them go."

But depending on the Nextel walkie-talkie phones as a primary form of communications could turn out to be a mistake for the parade and those that run it. Unlike hams, parade officials and their corps of volunteers are not trained communicators. Rather they have been used to handing a message to a ham radio operator and having an answer appear. Most are likely unaware that they will have to contend with numerous people calling at the same time. All with priority traffic and all demanding immediate answers.

With their years of experience, the hams were the buffers who learned how to work around these problems. But the cellphone provider is coming in cold with no experience in this specialized communications area. There will likely be no experienced net control stations and no way to prioritize needs.

On Thursday, November 18th, as this report was being prepared, we received a copy of a letter from TORRA Chair Jeanne Nordland, WD6BWN, thats being sent to all of the groups members. It confirms that hams will not be providing voice communications in 2005, but that A-T-V assistance to the parade will continue as it has in years past.

But ATV is only one part of the equation. the question still remains as to whether or not the Nextel phones can take the place of the hams and a structured voice communications network. This is something that nobody will really know until January 1st of 2005. That's when the drama will be played out live to the world on their livingroom T-V screens -- on New Years Day. And likely, 10's of millions of people will be watching.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP, reporting.

--

As Norm said, these days the Tournament of Roses Amateur Radio group currently has about 300 members. How many might return if they are asked back in 2006 is really, anyones guess.

To read the complete Pasadena Star News article on the departure of ham radio from the Tournament of Roses Parade, take your web browser to http://www.pasadenastarnews.com/Stories/0,1413,206%257E22097%257E2529574,00.html

THE BPL FIGHT: FCC ISSUES ERATTUM ON BPL R&O

The FCC has issued whats known as an Notice of Erratum. One that slightly modifys its Report and Order on the introduction of Broadband Over Powerline operations.

Two changes were made. First in Section 15.15 under General Technical Requirements section B now reads: "Except as follows, an
intentional or unintentional radiator must be constructed such that the adjustments of any control that is readily accessible by or intended to be accessible to the user will not cause operation of the device in violation of the regulations. Access BPL equipment shall comply with the applicable standards at the control adjustment that is employed. The measurement report used in support of an application for Certification and the user instructions for Access BPL equipment shall clearly specify the user- or installer-control settings that are required for conformance with these regulations."

Also, Section 15.31 is amended by revising a paragraph under Measurement standards to read:
"Measurements shall be performed at a sufficient number of radials
around the equipment under test to determine the radial at which the field strength values of the radiated emissions are maximized. The maximum field strength at the frequency being measured shall be reported in the equipment authorization report. This paragraph shall not apply to Access BPL equipment on overhead medium voltage lines. In lieu thereof, the measurement guidelines established by the Commission for Access BPL shall be followed."
While these changes may seem as minor right now, they could impact ham radio and other services in the future. This, when and if B-P-L ever becomes a major player in the area of direct to home high speed Internet access. (FCC)
**

THE BPL FIGHT: ITS NOT BPL IN WESTERN VK

Meantime, some good news on the B-P-L front from down-under. Word that interference being heard by hams in Western Australia is not coming from a powerline broadband installation. The problem is that nobody is sure exactly what the source is. W-I-A newsman Dennis Muldownie, VK6KAD, is in Redcliff with more:

--

One of the rumors persisting in VK6 is that our power authority is running BPL. This has been denied several times. I may have found the source of these rumors, as I have stumbled across a website dating back to 2002, in which the testing of Broadband by the power company was mentioned.

However it was not BPL technology. There is an ongoing project here to "rewire" the West by placing low voltage and some higher tension feeders underground. This is - or was - progressing slowly. It improves the street-scape out of sight and reduces the potential for damage in bad weather. In providing these services apparently optical fiber cable was also placed in the trench, and the Broadband was under test on the fiber. Not you will note on BPL.

Very little of WA was ever wired by Cable as in Sydney and Melbourne for Cable TV, and therefore Cable Modems are not an option. The way is clear for the power authority to provide such services by Fiber as it replaces the overhead with underground. I have not found out what the tests revealed.

And having said all that, I am finding excessive noise in isolated pockets on the AM Broadcast band, from power lines in my area. I suspect the approved items used on Power lines obtainable from many outlets are not as bullet proof as we would like to suspect...

The saga continues.

--

The saga does indeed continue and Dennis is one of those at the forefront of the search. (WIA News)

**

Break 1

>From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the N9TO Repeater serving Westmont Illinois.

(5 sec pause here)

**

RADIO AND THE LAW: CLUBS AND THE FCC

Still with legal issues, for a group to be eligible for a club callsign, the FCC has four criteria thar must be met. It says that a club must be made up of at least four members, have a name and legal document of organization and a primary purpose of being devoted to Amateur Radio activities consistent with FCC rules. But do you know how many of the members of a radio club need to hold ham radio licenses?

These and many other questions are answered by former FCC rules Chief John B. Johnston, W3BE, in an article titled "What Is a Club"

appearing in the just out December issue of Worldradio Magazine. And filling close to two pages, Johnston explains in great detail the recognition given clubs by the regulatory agency and the rules regarding club call signs.

If you have ever had questions regarding radio clubs and their dealings with the FCC, this is the tell all definitive article you have been waiting for. More about subscribing to Worldradio and sample issues is on-line at www.wr6wr.com

And less we forget, the answer to how many members of a radio club must hold a valid FCC issued ham radio license is only one. The rules say that at least one member must have an operator and primary station grant from the agency to apply for a club station license. (Worldradio)

**

RESCUE RADIO: US COAST GUARD AUXILIARY SEEKS RADIO AMATEURS

The ARRL Letter says that the U-S Coast Guard Auxiliary is looking for Amateur Radio operators or prospective amateur licensees. Amateur Radio Newsline's Bruce Tennant, K6PZW, has more:

--

Wayne Spivak, KC2NJV, is with the Coast Guard's National Public Affairs Department. He says that because the service operates every day, in good weather and in bad, that the U-S Coast Guard Auxiliary is on the air whether there is power to operate or not. And at times like these, the Coast Guard and the Auxiliary rely on the Auxiliary Net as a backup radio network. In areas with a large U-S Coast Guard presence, the AuxNet operates in both a support and backup capacity. More important, in regions where there is no regular Coast Guard presence, the Auxiliary may rely solely on its AuxNet for communication.

And because of this, Spivak says the Coast Guard Auxiliary is seeking ham radio volunteers. He says that this is because amateurs are good communicators. That they have developed both in everyday radio operation and participation during emergencies through RACES, ARES and SKYWARN.

Spivak believes that Amateur Radio and the U-S Coast Guard Auxiliary are an ideal fit. He says that the US Coast Guard Auxiliary is open to all US citizens over the age of 17. A security background check, paid for by the US Coast Guard, is required before an applicant is accepted. If you are interested in expanding your public service horizons, please visit the US Coast Guard Auxiliary Web site. Its in cyberspacw at www.cgaux.org. Again, that U-R-L is www.cgaux.org and

I'm Bruce Tennant, K6PZW, reporting for the Amateur Radio Newsline.

--

A direct link to the U-S Coast Guard Auxiliary application webpage is at http://www.cgaux.org/cgauxweb/getzip.html (ARRL)

RESCUE RADIO : MARITIME MOBILES SERVICES NET NOW STREAMING AUDIO

The sound of the daily Maritime Mobile Service Net can now be heard in streaming audio on the Internet.

The net meets daily on 14.300 MHz between 16:00 UTC and 03:00 UTC. The audio streaming originates from the receive site of W-L-O Marine Radio in Mobile, Alabama using a Japan Radio Company N-R-D 535 D receiver fed from a T-C-I ground mounted loop antenna.

As with any streaming audio on the Internet, there will be an inherent lag from the time its encoded in Alabama and when you hear it on your computer. In this case the delay could be anywhere from 4 seconds to 1 minute, as compared to live on-the-air audio.

Because of this, this streamed audio is not meant to be used to control the net. Rather, it is intended as another means for non hams to listen to the net, family of boat crews to listen for the boat and a way to monitor the net when you are away from the radio or when you have no propagation to hear the net control station.

You can hear the streamed audio daily when the net is in operation. You will need a media player like Winamp or Real installed on your computer. Simply take your web browser to www.mmsn.org and click on the yellow icon that says "Listen Live." (MMSN)

ENFORCEMEMT: CBS PROTESTS JACKSON WARDROBE MALFUNCTION FINE

Viacom Corporation, the parent of the CBS network says the FCC's proposed 550-thousand-dollar fine for Janet Jackson's Super

Bowl "wardrobe malfunction" is "entirely illogical." Viacom says neither it nor anyone at CBS knew Justin Timberlake would yank off a piece of Jackson's black leather top.

The move exposed Jackson's right breast for less than a second, but generated a-half (m) million complaints to the Federal Communications Commission. The fine is the largest ever imposed against a T-V outlet. Viacom is seeking to have it rescinded and has indicated that it will fight the matter in the Federal courts. (Published news reports)

**

ENFORCEMENT: WLFK-LP ADMONISHED FOR BROADCASTING ADVERTISEMENTS

Low Power FM stations are prohibited from broadcasting advertisements by the Communications Act of 1934 and by the FCC's own rules. And doing so has brought a letter of admonishment to a Wisconsin based LPFM station.

This hand-slap went to WLFK-LP and is looked at as a fair warning to all Low Power F-M stations not to broadcast commercial advertisements. A letter of admonishment carries a warning to cease and desist but no punitive action such as a fine. More is on-line at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-04-3555A1.doc (FCC)

**

TELECOMMUNICATIONS LAW: SPAMMER BOUNTY SUGGESTED BY FTC

The U.S. Federal Trade Commission has given its endorsement to a plan that would reward insiders for information leading to the arrest and conviction of people or companies that produce spam. In a recent report the FTC said that some anti-spam proposals, such as a "Do Not Spam" list similar to the agency's highly successful "Do Not Call" list, would not work and could make spam worse. But the agency said that providing monetary rewards for turning in spammers could work in some cases. The FTC is suggesting rewards ranging from $100,000 to $250,000 to turn spammers in. (FTC)

SPECIAL EVENTS:  PEARL HARBOR DAY COMMEMORATIVES - DEC. 4 - 7

Two upcoming special event stations will be on the air to commemorate Pearl Harbor Day.  The first will be operated by the Historical Electronics Museum Amateur Radio Club from December 4th to the 7th using the call sign W2W.  Operation will be in the General; class segments of all of the high frequency bands.  Further information is on-line at www.qsl.nwt/w3gr or by e-mail to w3gr@arrl.net (Worldradio)

The other operation we have heard about will be one day only on December 7th.  This one by the U-S-S Kidd Amateur Radio Club down in Baton Rouge, Louisiana.  Look for this operation mainly SSB on 30 meters from 14.250 to 14.320 MHz and C-W near the popular QRP calling frequencies on 40 through 10 meters.  More on this one is on the web at www.lsu.edu/brarc  (Worldradio)

**

SPECIAL EVENTS:  THE BATTLE OF THE BULGE - DEC. 16 - 20

And a bit later in December the Anaheim California Police Amateur Radio Club will sponsor special event station K6B.  This, to commemorate the 6oth anniversary of the famed Battle of the Bulge that took place during World War 2.  Operation will be on 40 through 15 meters from December 16th through the 20th.  For more information please e-mail km6hb@arrl.net.  (Worldradio)

BREAK 2

This is ham radio news for today's radio amateur.  From the
United
States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

## NAMES IN THE NEWS:  A FLY-IN TO HONOR K9TRG

He served the ham radio community for years, especially in the early days of F-M.  And on Veterans Day, Thursday, November 11th, some nineteen hams from around the nation gathered at a restaurant in Suburban Chicago to honor their friend Art Householder, K9TRG, of Spectronics fame.

If you operated F-M in the 1960's or 1970's using radios like a
Motorola 80 D or a General Electric Progress Line, then the name Art Householder and the call sign K9TRG has to ring a bell.  Back when F-M was in its infancy, Art was the premiere supplier of decommissioned police and taxi dispatch radios to the growing world of Amateur Radio F-M.

Now retired and in declining health, he cannot travel as he used to. So this year his friends came to the Rose Garden restaurant in Elkgrove, Illinois to spend the day with him.

And the list reads like a whose' who of ham radio including such notables as Evelyn Garrison, WS7A, who came from Washington State and F-M pioneer Dick McKay, K6VGP, of Los Angeles.  From the Chicago area ATV pioneer Henry Rue, AA9XW, the FCC's  Russell "Joe" Moonie and RAIN producer Hap Holly, KC9RP, were among those sharing the day with .

While the luncheon is held every Thursday, this was notable event for Art because of the number of people who either took time off from work or traveled thousands of miles to attend.  And many say that they plan to do it again next year.  (KC9RP)

## RADIO LAW FOLLOW-UP:  COURT ORDER ON PET CHIPS THAT CAN'T BE READ

Remember our story a few months ago about a particular pet identification transponder chip that were not compatible with most scanners in use in the United States?  Well, it took some time but a judge now barred a company from selling or advertising these microchips.

The preliminary injunction from San Diego Superior Court Judge

William C. Pate yesterday blocks several named defendants from selling or advertising its unit called "Recovery Chip," If and when the company wants to resume selling or promoting the Recovery Chip product, the court must first approve the company's proposed advertisements. Also, any new ads must disclose that the Recovery Chip cannot be read by the majority of microchip scanners in U.S. shelters.

Banfield, the Pet Hospital has been the U.S. distributor of the particular per I-D chip. It is based in Portland, Oregon and operates in Pets Mart stores throughout the United States. Banfield voluntarily suspended microchip sales in early May, before the lawsuit was filed, and has no immediate plans to resume its microchip program. (Published news reports)

**

EMERGING TECHNOLOGY: FREE WIRELESS INTERNET ACCESS IN VAN NUYS CA

A pilot program to provide free wireless Internet access in part of Los Angeles began on October 29th. This at the Marvin Braude Constituent Services Center in the suburban of Van Nuys. During the six-month program, anyone in the area will be able to use a wireless-enabled notebook computer, P-D-A or other mobile device to access the Internet. The high-speed access will be available in the outdoor plaza, along Van Nuys Boulevard and in public meeting rooms and service counters in the building. (Computing)

WORLDBEAT - BELGIUM: QRP POWER TESTS ANNOUNCED

Sunday November 21st, , December 26th and January 16th are the dates announced of the second Belgian U-B-A 'Candlelight Tests." In these tests, several stations transmit simultaneously on 80, 40 or 30 meters running micro power levels ranging from 100 milliwatts down to 5 milliwatts. The challenge for participating amateurs is to copy the code words embedded in the transmitted messages. Full information is on the U-B-A website. A link to it appears ay www.uba.be/actual/candlelight/candlelight_en.html. (GB2RS)

**

DX

In D-X, PF5X, informs the Ohio Penn D X newsletter that he has received his license from the local authorities in Singapore. Also that his station was inspected and approved for active usage. His callsign is 9V1CW, and Enno says that he will be in Singapore for about 3 years. All QSLs via PA0KHS direct or via the bureau. (OPDX)

And word that N3SIG has been redeployed to McMurdo Station in Antarctica. Chris says that he expects to be there until March 5th. Thats the good news. The bad comes in a report that says the ham shack's antennas there were destroyed, and there us also damage to the main HF rig. So he plans to hand carry a HF rig from his home in Pennsylvania to Antarctica. When he arrives, Chris says that he will construct a dipole and will be on the air as N3SIG stroke KC4. Listen for him mainly on 14 dot 243 MHz which is the unofficial Antarctica ham radio calling frequency. (OPDX)

Lastly, a real rare one with word that Christmas Island as VK9XG will be active from the 22nd of November until the 8th of December. The station will be operated by W0YG and W0MY and will be operational in the CQ world wide CW contest plus a much-needed RTTY activation on 40, 80 and 160 meters. QSL this one as directed on the air. (OPDX)

**

THAT FINAL ITEM: THE BAGDHAD REMOTE BASE - REVISITED

Two weeks ago we reported that former 73 Magazine Editor Keith Lamonica, W7DXX, had arranged for the installation of a remotely controlled transceiver in Baghdad, Iraq. A transceiver whose functions could be controlled by hams world wide over the Internet.

Well, that announcement by W7DXX has created quite a stir in ham radio circles because of the armed conflict taking part in that nation. This has resulted in many questions from the ham radio community that Lamonica recently addressed in an interview with Rain's Hap Holly, KC9RP. W7DXX says that some hams don't spend the
time to read whats in front of them:

--

Lamonica: "There has been a lot of activity, especially on the qrz.com site about the operation and people just don't take a breath and sit back and read the instructions. We have outlined everything that should satisfy anyones curiosity, but you still have people that just put their blinders on and go off to make wild statements."

--

Lamonica has lots more to say about the Baghdad remote and other uses of the Internet by ham radio.  You can her it all on this weeks RAIN Report.  Its on line in streaming audio at www.rainreport.com or on your phone at 847-827-7246.  That number is easy to remember as 847-827-R-A-I-N.   (ARNewsline(tm), RAIN)

Nov. 19, 2004
William J. Kole

Associated Press

Prague, Czech Republic

Ronald Reagan used it to reach out to the Soviets during the Cold War. Lech Walesa, the leader of Poland's Solidarity movement, likened it to the sun lighting the Earth. Rock band R.E.M. immortalized it in a cynical hit song.

Radio Free Europe/Radio Liberty is trying to woo new listeners in Russia with a controversial overhaul that former dissidents and other critics contend will compromise its reputation and influence as a beacon of democracy.

"We're becoming just another bunch of blah-blah-blah on the air," Lev Roitman, a senior commentator for the private U.S.-funded station, said Thursday. "They must be idiots to do something like this at this critical time in Russia."

Officials at RFE/RL's football field-size newsroom, housed in Prague's communist-era parliament building - an imposing edifice of black granite circled by heavy concrete barricades and machine gun-toting guards - say they simply want to modernize the programming and expand its reach.

The station's primary target is urban, employed, university-educated Russians aged 35 and up. Key changes include more call-in shows, a Web site overhaul to appeal to the 18-plus crowd, and a shift from longer evening programs on human rights and other issues to shorter, snappier spots aired throughout the day.

Nenad Pejic, RFE/RL's associate director of broadcasting, insists that Russian-language news and programs on human rights will remain a priority and that only the format - not the content - will change.

"It's about our survival, not our mission," he said. "Listeners in Moscow tell us our programming is a little old-fashioned, that we still sound like a dissident radio. We're just revamping. We want to be a local radio with a global perspective."

But the proposed overhaul, a copy of which was obtained by The Associated Press, also includes plans to cut staff and "move the center of gravity to Moscow" by dropping on-air references to Prague to give the impression that RFE/RL is a local Russian station rather than an outsider.

The broadcaster, which gets $75 million a year from Congress, has moved key positions to Moscow and now broadcasts 70 percent of its material from the Russian capital. Critics say that exposes the station known Radio Svoboda - Russian for "Liberty" - to government intimidation and the threat of censorship.

"If anything similar to the current plans of the RFE/RL management would have been suggested in Soviet times, there would have been no doubt as to the source of inspiration: the KGB," Elena Bonner, the widow of Nobel Peace Prize laureate Andrei Sakharov, wrote earlier this month in an open letter to Western media.

"Can anyone think of a more Cold War-type operation than one that pretends to disguise a radio funded by the U.S. Congress and based in the Czech Republic as a local Russian radio?" she said, denouncing the plan as superficial and "a stupid gimmick."

Mario Corti, a former RFE/RL Russian service director who now works as an editor, ridiculed the station for basing the changes on recommendations by a U.S. consultant recently hired to create an internal music channel for the Starbucks coffee chain.

"The rationale for some of the changes is reasonable. But how can you establish credibility when you're misleading people?" Corti said. "We're a paragon, perceived to be independent because we're a foreign station that doesn't belong to the oligarchs. We had something unique. Now we're becoming like everyone else."

RFE/RL, whose 600 employees and network of 3,000 freelancers were overseen and funded by the CIA until 1971, now answers to the Washington-based Broadcasting Board of Governors. Besides its transmissions to the former Soviet Union and Eastern Europe, which are rebroadcast by affiliates to far-flung regions, it also airs broadcasts in Iran, Iraq and Afghanistan.

Masha Klein, who heads the Russian service, conceded RFE/RL's journalists in Moscow "have been under pressure for years," but said the station is prepared to shift staff back to Prague if Prime Minister Vladimir Putin's government interferes.

She said the revamp sprang from the perception that the station nominated in 1991 for the Nobel Peace Prize is foreign, aloof and run by Russian dissidents and expatriates "who hate Russia" and spout American propaganda.

"I'm Russian, and I dearly hope the day will come when our services are no longer needed," she said. "But I don't see that in the near future. The Russian people still need us."

Forum staff report, The Forum
Friday, November 19, 2004

Township of Somerset, Wis.

A 32-year-old man was killed when he parachuted from a radio tower in this western Wisconsin town, authorities said.

St. Croix County Sheriff Dennis Hillstead said it was foggy and Erich Wagar of Brooklyn Park, Minn., may not have known how close he was getting to the ground during the Wednesday jump.

Hillstead said Wager and a friend jumped from a tower owned by Infinity Broadcasting.

The two jumped from about 940 feet and Wagar's parachute opened, but too late to slow his impact into a hill, the sheriff said.

Eric Lunder, 29, of Hutchinson, Minn., jumped shortly after Wagar, and was not injured, Hillstead said.

Having already celebrated Episode 300 earlier this week, Scripts & Scruples is now ready to celebrate another special occasion.

Join us for a six day Thankgiving special starting Friday, November 19th, and concluding on Friday, November 26th.

You can listen to an mp3 each day or read the episode. We are now podcasting our episodes so you can download that way as well.

Get my friend out of his car!!! He's a lifelong New Yorker who has moved to Gaithersburg, MD, a bit NW of Washington, D.C. He's a diehard fan of NYC sports talk station WFAN (not streamed on the net), 770 Am. He can get it on his car radio, but not in the house. So he'll sit in his driveway at night listening to The Fan. Obviously, he's got a better antenna in the car. So how can I help him put a good AM antenna in his house??? I've seen the C Crane site, and a Terk unit or two. I'm not terribly interested in a homebrew solution.

I've considered setting up an audio server here in New York so he could tap in, but that's another discussion.

Why not?  A longwire antenna will beat any of the active antennas hands down.
Problem is that it may be so good that you'll find yourself needing a more
selective radio.

>Hello................NG
>Does anyone know anything about the Optimod 8000A...?

It's a multiband compressor combined with a multiplex stereo generator.

>Anyone still use it ...?

Some stations still do.  If you aren't hitting it hard, it's fine for a
station that isn't trying for extreme loudness.  The 8100 gives a little
bit better modulation but not by all that much.

>Can it be used for recording...?

Not really, because the output is a multiplex composite signal.

>Ruff....value these days....?

I dunno, call one of the used equipment brokers.  Harris-Allied's guys
always have some in stock.  They are pretty common.

For sale:

(The "Radio Crazy" is baaaakkkk!!!)Hi!

Partial interest in LPTV CP (Channel 38)in small Georgia market. 50,000 watts ERP on main lobe. Directional antenna. Full asking price and insanely reasonable $10,000.

This is a joint venture. There is an element of risk and you could lose all or part of your investment.

Active or inactive investors with at least $2,500.00 each are welcome.

All investors would be on the board with full voting rights if desired.

The FCC is eventually going to force all TV stations higher than channel 51 to get off the air or change channels. Note that this CP is below channel 51 so will not suffer that issue.

I have seen the FCC coverage map and the proposed application puts a grade "A" signal over the entire city of license and then some.

Call (478)741-1710 in Macon, GA.

73,

Meyer Gottesman, W6GIV
aka: The "Radio Crazy"
aka: Moron Gottesman

If the friend lives in Montgomery Village, Gaithersburg, outdoor antennas
are prohibited, so it would have to be a stealth one.  All of the
subdivisions started in Montgomery County in the past 45 years forbid
antennas, to the best of my knowledge.

That said, I'd certainly try some sort of wire antenna even indoors or
temporarily outdoors before going the Terk/etc route.

Is the friend in an apartment? Does it have a balcony? If in a house, does
it have a deck, a wooden fence, even a short one? What sort of "indoor"
receiver does the friend have?

It's probably not the antenna. Signals are plenty strong at night. More likely selectivity of the receiver.

The Sony 7600GR on sale at Bennett Bros for $109 is a great deal, with really high selectivity (owing hugely to sync detection and selectable sideband) for the price; and you get shortwave too.

http://cyg.bennettbrothers.com:80/bluebook/product.asp?
catalog%5Fid=1&product%5Fid=22520&member%5Fnum=

Want to use it (or any radio) also _in the daytime_ out to hundreds of miles range on the AM band?
Get a passive MW loop, say the Terk loop, to set beside it. It's a tuned circuit, a big coil and a variable capacitor is all, that matches the impedance of the internal loopstick antennas in AM radios to free space, letting you in most radios hear right down to the propagating noise level; which is the best you can do with any small antenna.

This matters only in the daytime. At night, all the AM band signals are strong; there's too many of them, is the problem then.

In the daytime, D-layer absorption soaks them all up leaving only groundwave signals, which are genuinely weak.

Probably you can only hear the FAN at night from DC, though I don't know. I've heard it at noon in Central Ohio http://rhhardin4.home.mindspring.com/wfannoon.ra

A little #22 magnet wire under the eaves will do an amazing job and nobody
will ever be the wiser.  I did this in apartments and college dorms for
years for receiving and transmitting.  I had a 40M dipole with trap coils
between my balcony and two adjacent buildings even, once.

I doubt that John Peel's family will be too impressed by Dann's
exaggeration of his significance in John's life and career. Aside from
the late John Walters, Chris Lycett was the producer with whom Peel
had the longest and closest relationship. I find it a bit odd that
Dann was the one enlisted to do such a tribute.

I've been enjoying Real Rhapsody. It does cost me about $10/month. I feel it's worth it. Over 700,000 songs are available for listening plus many stations. If you have kids the down-side is there is only one kids channel. Their playlist is too broad. One minute they're playing the Muppets the next minute they're playing Aaron Carter. They need to add more stations. One should be Preschool age, the other Pre-Teen and another for Teens.

They do offer 14 days free trial at
http://www.real.com/rhapsody/?src=102504realhome_1_2_2_1_1_1

Check it out!

I saw that xm is coming out with a portable walkman-type radio.
Anyone know about this?  I'm wondering if you can get reception
indoors or will the antenna only pull a signal when your outside?
Adva<Thanks>nce.

Radio operator Mike Spenser on Pirate Radio 603AM is giving up.
Temporarily, at least.

Spenser is closing his transmissions on medium wave 603 kHz, transmissions
said
to be illegal by license owner Roy Sandgren.

"I'm going to England for ten days to negotiate a great contract," Spenser says to the local newspaper �landstidningen.

If Spenser can resume his transmissions later on is doubtful. The local governmenton the Finnish island of �land has ruled that Mr Sandgren's licens is suspended for the next six months. That is not deterring Mike Spenser.

"I have the right to lodge a protest."

Local administrator Veronica Johansson sighs.

"If they would just calm down a little," she says to �landstidningen.

Bt Robert McNeil

Blood on the Carpet: Walking With Disc Jockeys, BBC 4
Natural World, BBC 2

Widespread grief at the recent death of John Peel demonstrated how disc jockeys have become big personalities in public life. It wasn't always thus. In the 1920s, when it all began, the BBC instructed its DJs (meaning, in this context, dinner-jackets) to keep themselves out of it and just offer polite introductions to the music.

Blood On The Carpet: Walking With Disc Jockeys** (nice half-pun on Walking With Dinosaurs; oh, you'd noticed that yourself?) traced the rise of the DJ from plummy-voiced poltroon to slavering scruff.

Christopher Stone was the BBC's first DJ, or presenter of music, playing shellac discs designed to discourage foot-tapping and similar instances of physical hedonism. Christopher and his successors had to submit their scripts in advance to the "presentation controller" (a fat bloke, we presume), who would excise any mention of the presenter's name. "Uncle" Rex Palmer must have sneaked in a bit of personality, mind you, even if only an avuncular one.

In the United States, meanwhile, commercial radio had to be more lively - by which I mean crass - to attract listeners and those who prey upon them, by which I mean advertisers. Here, in 1954, Alan Freed was reputedly the first person in the world to say the dreaded words: rock and roll. How dare he! Didn't he realise there could be women listening?

Back across the pond, Radio Luxembourg was emitting evil airwaves from the continent, promising in dreadful mid-Atlantic tones "pops-a-plenty and top 20". On the ocean wave, too, the pirate station Radio Caroline offered non-stop pop and gibbering from DJs with no script.

Peel was an exception to this trend, with his show, The Perfumed Garden (didn't the Sixties spawn such lovely names?). He said: "I didn't see the need to say anything. What was important to me was the music." How ironic that, of all DJs, he became the best loved for his personality.

The BBC was still offering "jolly music to help you through the day" when Alan Freeman arrived from New Zealand with his interesting and amusing catchphrase, "Not 'arf".

When the Government banned the pirates, pop-pickers feared the worst. One mini-skirted burd said: "The BBC? It's bound to be dead." In fact, the Beeb' s corpse was twitching to the beat, and the newly funkified corporation went to the opposite extreme, making stars out of its DJs, who found themselves chased down the street by girls with poor self-control. Never mind dinner-jackets, this new breed of chap would sometimes present his show half-naked. Honestly, you didn't know where to look when you were listening.

By the 1990s, if I haven't got my decades in a dither, new pirate stations were promoting raves and music with lyrics about jacking one's anatomy or shaking one's booty, which one presumes is a corruption of the perfectly respectable word "bottom".

DJs were also performing in front of thousands, scratching records back and forth, and effortlessly mating Tom Jones with Kraftwerk. Dance jocks became household names, though not in any household I've ever entered. I make an exception of Fatboy Slim, mainly because his name has often intrigued me. How interesting, therefore, to learn that he was really called Norman Cook, which may explain why, far from being "cool", he always looks uncomfortable.

Being uncomfortable is a classic sign of civilisation, so all may not yet be lost. Lost, though, is John Peel. *Blood On The Carpet was part of the admirable Time Shift series, a televisual chronicle providing the right amount of information at the right pace. Unfortunately, time had caught up with its inadvertantly poignant caption for John Peel: "DJ 1967-present."

I'm not a big fan of death, which means I tend to avoid nature programmes, where Bambi is murdered nightly. Death, of course, is a way of life for lesser species (such as the Countryside Alliance) and there's nobody more adept at dishin' it oot than your average lion. He's never happier than when he's got his gnashers in something else's neck. However, as **Natural World explained, he now faces extinction himself, with numbers perhaps as low now as 16,000.

Part of the reason for this is that they've started to attack cattle, which has angered the farmers, and if there's any creature that knows more about dishin' oot death than your lion it's your farmer.

In South Africa, a Dr Vartles has set out to redress the balance by setting up a lion sperm bank. I can't tell you how this works because, frankly, the very mention of the s-word made me look away. See what I mean? Nature documentaries are not for the squeamish.

5 November 2004

The FCC has upheld a $10,000 fine against a man it says ran an illegal station out of a restaurant in Orlando, Fla.

Everald Oliver Brown had appealed the 2003 fine, arguing that he didn't respond to the first notice issued after field agents spoke to him at the station because he thought it was a warning only. He also said he was under the impression someone was applying for a station license. The agency said Brown indicated he would send his credit report to the commission, to back up his claim that he could not afford to pay the penalty.

The commission says it didn't get that credit report and regardless of whether he is the station owner, he was broadcasting illegally and is liable for the $10,000.

The agency also upheld an earlier fine of $10,000 against David Michael Oaks for operating an illegal station in Beaverton, Ore.

Oaks said he realized his transmitter was exceeding allowable power limits for an unlicensed Part 15 transmitter, and he tried to lower the power each time he received a notice to this effect but was confused about how far over the limits his power levels were.

The commission didn't accept this argument and reaffirmed the fine.

The signal on 567 kHz is coming in well in this part of London just before 0300 UTC on 6 November.  The main test will come once the sun rises around 0700 UTC or so.  Prior to the closedown, the signal could be heard in London throughout the day, if somewhat weak, despite adjacent channel splatter from Spectrum 558, and I would expect the same to apply now, assuming that the signal characteristics, ie power and antenna set-up, are the same.  During the night the signal, as well as the audio quality, is better on 567 than on LW.

It will be interesting to see whether RTE offer any alternative programming on 252 as opposed to 567.  I would assume that alternative programming is offered on FM whilst sports in on the other outlets, but of course the FM signal will never reach London.

John,

XM radio enthusiasts should hold onto their hats, as Delphi has just unveiled the first truly portable XM (a.k.a. "XM2go") radio. The Delphi XM MyFi is unqiue because it has the first built-in XM antenna. It also has a built-in FM wireless transmitter and a rechargeable battery providing up to 5 hours of use. The MyFi comes with a car and home kit, remote control, and earbuds. The device is made to be used while walking or running, which is a first for satellite radio. You're probably wondering what good the satellite radio will be if you're located somewhere you can't get a signal, but the folks at Delphi have this covered as well: the MyFi also has a memory mode that allows you to record 5 hours of XM content. The Delphi XM MyFi will be available for US$349.99 at major U.S. retailers and online in December. Read more from the XM website.

So contact your State Atty General and request help with the rebate.
Usually a letter from an Atty General's office gets the rebate coming
and if it doesn't, your failure to receive the rebate may be part of a
suit against the company in question.

Sweet! (10:47am EST Wed Oct 27 2004)
I like it! - by Nice

A satellite radio w/ an FM transmitter! (11:00am EST Wed Oct 27 2004)
ut-oh.... now the FCC will still be able to fine Howard Stern. - by oh sh1t!

re: oh sh1t! (11:03am EST Wed Oct 27 2004)
yesh... i'm sure Sirius will be coming out with one of these in the near
future too.
Satellite radio is very competive.
Apple should intergrage an XM or Sirius receiver into the next iPod. Now
that would be cool. - by mingisback

Too pricey
(11:34am EST Wed Oct 27 2004)
This sort of thing is long overdue, but they are charging $350 for it. I would have preferred they drop the recording feature and lower the price by half. The thought of taking XM anywhere I go is wonderful, but the price needs to be more in line with the other XM devices. - by akula

XM Mobile Radio (1:03pm EST Wed Oct 27 2004)
Yes! Finally satellite radio is portable...its about time. Anyway, I dfinately agree this first generation radio is way to expensive, but as with all new technology, it does eventually drop in price. Hopefully this will happen...and soon. - by lance

Hmmm... (2:29pm EST Wed Oct 27 2004)
Why would anyone would wanted to pay $350 for the unit and then they charge you some more for monthly subscription fee. No thanks. - by :-[

Very cool (5:14pm EST Wed Oct 27 2004)
I like this one...price will drop soon enough - by Nunhgrader
XM radio will be obolete (5:36pm EST Wed Oct 27 2004)
it will be obsolete when we have highspeed wireless internet connections everywhere and we can just listen to webradio free of charge. - by JZ

what about a satellite phone with a (5:46pm EST Wed Oct 27 2004)
built-in satellite radio and satellite tv? - by wishing

Expect discounts for long term contracts (8:29am EST Thu Oct 28 2004)
I can see XM offering this for half price (after rebate) if you sign up for a two+ year contract. This would be similar to the satellite TV model started in the 90's and the cell phone model being used today. Give away the hardware and make money on the service. - by Barkley

Great Idea! (12:18pm EST Thu Oct 28 2004)
Me and you both, wishing. I suppose in time we will be able to have portable satellite tv receivers. Of course since it took all this time to make a portable satellite walkman type radio, we could be waiting a year of two. - by anxious geek

Better be worth it. (11:58pm EST Sat Oct 30 2004)
I hope they have a liberal return policy. At this price it should work everywhere and sound great. I work with loud machinery and wear FM headset/hearing protectors. If I can broadcast an FM signal to the headsets I'll be in heaven. - by Jed

November 06, 2004
By Richard Beard
(extract)

The short-wave radio Reflink, available at Twickenham and several Premiership grounds, has also contributed to this humanisation of the referee. He speaks, he breathes (often very heavily), he stutters and gets confused. Anyone genuinely interested in what a good referee is saying can save money on Reflink by watching any match involving Tony Spreadbury. You don't need radio assistance to hear him, and his reffing works on the principle that because he's talking, he must be watching.

While referees are often perceived to be unjust, the Reflink has accidentally revealed the greater injustice of players. The most shameful performance overheard so far comes from John Eales in the 1999 World Cup final. Eales repeatedly bluffed Andre Watson that he'd take his team off the pitch (in the World Cup final!) if France weren't penalised for gouging, a horrible crime but one for which on this occasion there was no evidence. Four year later, the same referee whistled the 2003 final as if the Wallabies were still about to take their ball home.

Thankfully Colonel Tupperware, you are in a minority in thinking that JP waxs an nlistenable nerd. If you didn't like John Peel you could choose not to listen to him.

Personally I found Home Truths one of the highlights of the radio week. John had an easy style that put people at their ease. He had a rare skill of listening to and empathising with people, and his programme also highlighted the amusing and ridiculous in mundane everyday events.

His influence in launcing some of the most influential of populour musicians is alsop unprecedented. If it hadn't been for John Peel we might never have heard of T Rex, Black Sabbath, The Smiths, Punk, a number of Jamiacan Reggae artists etc etc.  I for one first discovered Punk and then The Smiths through listening to his late night show.

All those who do not like bland, sacharine, plastic pop owe him a debt of thanks.

6 November 2004

DXTuners is happy to announce that due to popular demand the Southern Sweden Beverage antenna site will be returning very soon and this time the beam of the beverage will likely be towards USA.

Last year many Western Hemisphere MW stations were logged here !

So... you bought a Roady, subscribed to the service, waited 9 weeks for a rebate item to arrive and when it didn't you cancelled the service?

In other words, you bought a product and a service you wanted, but because they didn't come through on something over and above what you originally expected (for free, by the way) you are willing to eat the cost of the equipment and cancel the service that you wanted.

Genius... pure genius...

By Roz Varon
November 5, 2004

Chicago super jock, Larry Lujack is being inducted into the Radio Hall Of Fame. ABC 7's Roz baron takes a trip back to her radio days, as she talked to Ole' Uncle Lar at his current radio home, Real Oldies 1690 am.

(ABC7 Video Clip at http://abclocal.go.com/wls/news/110504_ns_lujack.html )

"Here we are again, the Animal Stories news team anchor men, there's me, your charming and delightful Ole' Uncle Lar, and there's hime, little snot-nosed Tommy!" said Larry Lujack, Radio Hall of Fame.

In an age where radio is every changing, it's nice to know that uncle Lar and little Tommy are still around to get ya laughin'! Lujack is in town for the ultimate radio honor. Saturday he'll be inducted into the radio hall of fame. We got to visit with him on the air this morning, and he hasn't changed a bit!

"I know what they're going to do, they'll film about 5 minutes worth and use 5 seconds and wait until we pick our nose like this or scratch our butts and that's the part they'll use!" said Lujack.

Lujack spent 20 years of his radio career in Chicago, mostly at the Big 89, WLS. He retired in 1987, but couldn't get the radio bug out of his system. Roz Varon was lucky enough to have worked with the radio legend at the start of his broadcast career.

"I remember back when she was a nothing!" said Lujack.

"Contrary to popular belief you really were very instrumental in influencing me in the early days of my career; you were so kind to me, so giving, and nothing like your on air personality!" said Varon.

All kidding aside, lujack is humbled by the radio hall of fame honor.

"You look at the name of previous inductees, like Walter Cronkite, Edward R. Murrow, Jack Benny, Bob Hope and then you throw in the name Larry Lujack at the end and it just doesn't sound right," said Lujack.

"It's about time. I think most people, especially those who have worked with Larry in the past and people who have listened to him have said how come it's taken this long for him to get into the hall of fame," said Tommy Edwards, operations manager Real Oldies 1690.

"To relax myself I will down 5 or 6 quick Coronas and then get up there and think I'm being really funny and instead humiliate and embarrass myself and I tend to ramble," said Lujack.

But that's why we love him!

"Til then, this is both of us, him and me saying BYE!!"

To see a video stream of the induction-or get more information on the Radio Hall of Fame-visit www.radiohof.org/

You can see the ABC7 report by clicking on the video icon above.  You will need Windows Media Player to view this video. You can get it FREE by clicking here. NOTE: Video clips will only be available for 5-days from the date they were created. ALSO: Video clips will play in a separate window on Mac OS X machines, you may also see a video help screen.

Depends on the stucture and where you're located.  I have XM's indoors
that work great with no access to windows.

However, the MyFi has 5 hours of recording and TIVO-like functionality
built in -- so you can record up to 5 hrs of programming for use
indoors if you're where there is no signal.  Indoor reception won't be
as good as ooutdoor.  The unit has a built-in antenna, but a clip-on
external antenna when needed.

On my encouragement a co-worker bought a Roady2.  It worked fine in his car. He then bought a 12V wall-wart and tried it in his apartment in downtown DC.  It works fine - in fact conventional AM/FM are very poor in his apartment.

XM has quite a few repeaters around DC and that helps.  The building where we work in the suburbs is solid concrete with metal interior walls. Even in my north-facing office XM works fine - doubtless due to a repeater.

XM has enough repeaters in the DC area that I can hear them in every mall's multistory parking garage I've tried.

YMMV

This problem has been widespread and is uncalled for.  The problem has
persisted for a very long time.  I am an XM stockholder and know many
others who are stockholders -- and several have had the same problem.

I have forwarded a copy of your message to a member of XM's management
-- I hope to hear back tomorrow & post a response.

XM has operated with superb near-perfection.  It is remarkable that
this one thing has not been attended to.

You may want to check out some of the people at xm411.com about this
-- others have the same problem & may be able to provide advice.

When Berlin & Co. moved to KBME, I couldn't listen anymore, because it is weak in Bacliff. I got them okay in my car, but it seemed there were too many commercial interruptions. A "set" was talk, tune, tout.

BTW That KRIO ("sp"), ex-KRTS, is now Hispanic music, not twangy rock like I first thought. <G>

<< It registers about eight million hits a month, which is no small number. >>

Hits are one thing. Listeners are another. I understand it takes lots of costly bandwidth to provide for an economically viable Internet radio operation, unless it's uplinked for satellite simulcasting, too, to encourage advertising. Of course, if it's a government operation...

I don't know if it helps your situation immediately, but I have received back an email from the CEO at XM who agreed this problem should not have persisted, and committed to follow up on it at once. I also noticed he had forwarded my email to several other people.

My guess is they'll make every effort to build a fire under those who are dragging their feet.  It is highly unusual for this company to have allowed a problem like this to persist, but your's isn't an isolated incident.

Hopefully, this will help.

Hi guys,

In the next 8 months or so my XYL and I will be moving out of NYC into our own place, hopefully in Fairfield Co. CT or in Westchester County, NY.

I'm now about 1/2 a mile away from 50kW worth of 1560 "Radio Disney" in Maspeth, Queens, and I want to ensure I don't wind up close to another boradcast transmitter after the move. I enjoy operating 80M, and I would like to try 160 if I can get enough real estate to make it happen, but being close to that much MW Broadcast RF again isn't something I want to contemplate.

Is there a resource somewhere on the Web that will allow me to find AM transmitter sites (by geographc region) easily enough? Sure, they should be self-evident when in the immediate area, but I don't want to find any last-minute surprises either.

Thanks in advance.

73 de Peter, W2IRT

I recall seeing something on the FCC website. Too tired now to look
for it.

Also worth checking with aviation maps or the FAA, as any tower above
a certain number of feet has to be approved by them as well.

Happy trails,
Gary (net.yogi.bear)

This is an FCC fine, not a court-ordered one if it is the FCC that upheld it.  That means they ahve no way to collect it except by holding up any other FCC licenses or whining to credit bureaus(if they even do that).

Remeber the Janet Jackson issue? The FCC wanted to fine her,but soon realized they would be unable to do anything if she refused to pay as she does not hold any FCC licenses to revoke.

Only court-ordered fines can be imposed using threats of jail time. I would advise closing bank accounts if you are ducking a court-ordered fine, but these guys have no more power than a credit-card company. this fine is like a parking ticket against someone with no license plates or drivers license, and just as uncollectable.

I don't know if this is what you're looking for but have you tried
live365.com?  It has a lot of Internet radio stations by independents.
There is a catagory listing where you can choose the style/genre that
you want.

Peter,

Go to http://www.fccinfo.com/ and enter either the coordinates or location of the center of your area of interest and search for AM stations within however many kilometers you wish. This site downloads the FCC CDBS database nightly and parses it in very user friendly fashion.

Regards,

Al

Monday, November 08, 2004

Dublin Rock Radio Ltd, trading as Phantom FM, which began life eight years ago as a pirate station, was this afternoon awarded a licence for an alternative rock service for Dublin by the Broadcasting Commission of Ireland. There were four other applicants for the licence. Phantom FM has been an Internet-only station, having decided in 2001 to stop its pirate activities and devote all its energies to obtaining a licence. It was unsuccessful on two previous occasions, but did operate two 30-day temporary licences. Now the station hopes to launch its full-time service in the middle of next year, targeting alternative rock fans between 15 and 34 years old.

Spanish language listeners in Buenos Aires now have more opportunity to hear BBC World Service programmes. Radio Europa 97.1 FM has revamped its schedule to include programmes in Spanish. Radio Europa listeners in Argentina's capital can now hear BBC Spanish American service programmes nine hours daily, Mondays to Fridays from 1200 to 2100 and on Sundays from 1800 to 2200 local time. Listeners will continue to receive BBC World Service programmes in English from 2100 to 0500.

Radio Europa is a collaboration between BBC and Radio France Internationale, and the new schedule will continue to carry the RFI output. Lucio Mesquita, Head of the Americas Region, BBC World Service, said: "The addition of Spanish language programming to Radio Europa recognises the language's cosmopolitan and global role along with English and French. By broadcasting in Spanish we will be able to bring to a wider audience in Buenos Aires the BBC's high quality international programming."

Gustavo Muro, Director of Radio Europa, said: "We are pleased to be broadcasting a wider choice of programming from the world's leading international radio broadcaster. With access to BBC Spanish programming, Radio Europa's listeners will benefit from Spanish language news and features with a global perspective."

In addition to the programming on Radio Europa 97.1, BBC World Service programmes are currently broadcast on FM in Buenos Aires on la 2x4 92.7 FM and Radio Belgrano 89.3 FM, and on AM on Continental 590 AM, Radio Colonia 550 AM and its national network Radio de la Ciudad 1110 AM.

----------------

Using the link below will give you a list of AM & FM stations, sorted from
max to min by the field strength they produce in the ZIP code you enter.

Probably a more useful and easier approach than doing a coordinate search
for tx sites.

http://www.v-soft.com/ZipSignal/default.asp

I'm looking for a national syndicator for my oldies radio show, The Hits
Of Yesteryear.  The show is free to stations for barter.  If you have
any ideas please email. Many thanks.

Just logged in driving home at 6:05pm local time and still loud and
clear at 7:54pm local time.  I am 60 miles due east of Orlando, FL is
this Orlando?  If not, where is it from?  Tried several Google searches
and nothing is coming up.

Thanks!

I have to agree...
Live 365 is the best...you can listen free or get as premium membership...I think it's 49 bucks a year...
Having been broadcasting (Oldies) there for a year and a half it is awesome!

And my 7 year old even does a kids show 3 nights a week at 7
eastern...website is...

www.radio14fun.com

and there is a listen link from here.... Johnny

Very nice but a search function by name would be nice and that scrolling page with no scroll bar is HIGHLY annoying!

I believe you may be hearing WNTF, licensed to Bithlo, FL.  They
were/are a 2100 watt daytimer, but it looks like they've received a CP
to upgrade to 10,000 watts directional - still as a daytimer.  Perhaps
they're operating under a testing waiver while they perform the
upgrades?

Thanks for your note. Sorry you're having trouble with our new website design.

Over my objections, "voanews.com/ourworld" no longer takes you to the Our World page. Instead, it takes you to the science and technology page. The theory is that the visitor will find the latest stories here, since this page is updated daily. Since Our World is a weekly program, the Our World page is updated only weekly. (No, it doesn't make any sense to me either, but I produce a radio program; I don't have any say over the website.)

There are three ways to get to the Our World page where you can find audio files. From the voanews.com/ourworld page you can click on the link to Our World (It's the left-most graphic at the bottom of the page). Or you can look in the left column for the "Programs A to Z" section, click on "Find VOA Radio or TV Programs," then click on "O" and then "Our World." Or, easiest of all and special for you, just click on the link below:

http://www.voanews.com/english/science/ourworld.cfm

Unbelievable. 101-KLOL Houston's rock format is no more...Clear Channel replaced it with Spanish Language programming this morning.  This station has been around since the mid 70's when it began what was know then as an AOR format.

Today is the last day for an afternoon news block on Clear Channel's KTRH Houston.

5-staffers will be laid off (fired): PM Drive news anchor Jerry Hudson, who has been with the station "maybe" a year, and longtime reporters Darryl Azar (State Capitol Office) and Gail DeLaughter.  Not sure who the other victims are.

The afternoon news block will be replaced from 1-3 with a talk show by TV personality Deborah Duncan, and from 3-7 with Chris Baker who moves over from co-owned KPRC.

So far the long-time Sports beat program continues in the evening but Clear Channel will soon debut an all-sport format on am-790 KBME when it drops its locally grown "music of your life" format.

See a separate post on CC's dumping 101-KLOL's rock format for Spanish language programming.

By Brett Arends
Friday, November 12, 2004

Brewster, on Cape Cod, would seem an unlikely scene for a media bidding war. The 200-year-old seaside town - whose Web site boasts of its 23 nearby ponds - has a year-round population of under 10,000, though that rises to 20,000 in the summer months.

A FM radio frequency based there was put up for auction by the Federal Communications Commission last month with a starting price of $90,000.

Current bidding: $3.93 million, by public broadcaster WGBH, which also operates Boston's Channel 2 TV station. Otherbidders include College Creek Broadcasting and CRB Media.

The frequency doesn't even come with a station or a transmitter. The winner of the auction will, quite literally, receive just air.

They will have three years to jump through further regulatory hurdles, raise the masts, set up equipment and begin broadcasting. They will be restricted to a modest 6,000-watt transmitter.

What's going on? Analysts note that available radio frequencies are becoming increasingly rare, so when they come up for auction the bidding becomes intense.

And whoever wins the right to put a tower in Brewster - within sight of two golf courses and plenty of marshland - has the chance to reach much of the Cape.

The estimated revenue of the Cape Cod radio industry last year was $13.5 million, according to the specialist research group BIA Financial Network.

WGBH wouldn't comment yesterday. But it looks like the nonprofit broadcaster wants to add to its Cape and Islands news-focused radio network, which reaches Nantucket and parts of the Cape.

``It will help them extend the current service to an additional population, and because they have already paid for all the staff and programming, they can provide the service at a lower incremental cost,'' expert Marc Hand explained yesterday.

Hand is managing director of Public Radio Capital, a nonprofit organization that advises public radio and TV broadcasters.

He says similar stories are going on around the country. In all, the FCC is auctioning 288 individual bits of the airwaves.

The auctions were delayed for five years because of a lawsuit from public broadcasters.

Starting bids, set by the FCC, totaled just under $11 million. Today, the
bids have topped $117 million and they haven't finished yet.

That *is* a disgraceful misrepresentation. If you can receive 56 DAB stations then you surely must be able to receive the BBC and Digital One multiplexes, which have the following mono stations on them:

BBC:

Radio 5
Radio 5 Sports Extra
BBC7
Asian Network
World Service

Digital One:

Oneword
talksport

That's 7 on 2 multiplexes and not including any on the other commercial muxes that you must be able to receive if you can receive 56 stations. Moreover, I very much doubt that you can receive 56 unique stations, because if you can receive 56 stations then there's bound to be some overlap between stations on local commercial multiplexes that you're not in the area for. That is, how many versions of Kiss or The Storm etc can you receive?

Many of them sound like pan-potted multi-mono as distinct from
genuine Blumlein stereo, if that's what you mean....

"Dr. Daffodil Swain" <wa4jm@earthlink.net> wrote in message
news:cm31pt$3eu$1@xuxa.iecc.com...

>> > does the fairness doctrine
>> > have any effect on the viewer?

> The Fairness Doctrine no longer exists.  Reagan Administration.

If you'd been paying attention, ALL of us in this discussion are well aware of
this.
The argument (or, in this case, the question) was whether the FD, if in place,
would
have any affect on a viewer.  I say yes.  Frank, here, seems to think not.  While
I
don't doubt that the FD did suppress a licensee's willingness to editorialise, I
also
think that the FD forced licensees to provide more balanced coverage, and can cite
studies which conclude that the tenor of American political discourse shifted
right
after the FD was eliminated, as you note, by the Reagan FCC, abetted by right-wing
so-called "think tanks" dedicated to proclaiming the conservative world view.  The
sorry part of all of this is that that claim that conservative ideals would be
good
for the country is a lie....how else can it be concluded that the Great Depression
was made Great by the conservative values of the day, whereas the nation recovered
to
be the truly Great America through the instigation of socialist
practices....everything from social security, to bank deposit insurance, to

welfare and unemployment insurance.

As the conservative voice decries these programs, under the Fairness Doctrine it can be expected that the dissenting view MUST be discussed.  As it stands now, any contrary view can be squelched by an O'Reillian "Shut Up!"

Doesn't matter.  The method by which allocations are made is sound, proven and,
while
imperfect in that it leaves white areas, is beholding to physical laws which
require
this strategy.  And (getting back to the original thread) getting a few more
stations
on the air, under any condition, STILL does not permit the unbounded access to
public
discourse that printed matter or the spoken word affords.  And this is the reason
for
the Fairness Doctrine....to assure that all reasonable voices are heard, which
itself
provides a lot of latitude for freedom of speech and control of a licensee's own
business activities.  (And with that, it's time to change the thread's subject).

I think this is a pretty fair look at the competing claims of who's first:

a.. KDKA, Pittsburgh. Dr. Frank Conrad conducted the experimental work that led to the establishment of KDKA, which made its formal debut on November 2, 1920. Conrad was apparently among the first to use the term "broadcast" to describe a radio service.

b.. WWJ, Detroit. The birthplace of broadcasting at WWJ was the Detroit News. The station signed on the air August 20, 1920. It was the first station to be operated by a newspaper, and the first commercial station to broadcast regularly scheduled daily programs.

c.. KCBS, San Jose. Doc Herrold's station at San Jose (which eventually became KCBS, San Francisco) began as an experimental operation with the first documented transmissions occurring in 1909. It is said of Herrold that he conceived the idea of broadcasting information and entertainment programs to the public.

d.. WHA, the University of Wisconsin. 9XM-WHA achieved its first successful transmission of voice and music in 1917 from the University of Wisconsin campus in Madison. Pioneers in the establishment of the station were Malcolm Hansen and Professor Earle Terry.

e.. WGY, Schnectady, NY. Operated by the General Electric Company, WGY served as the test bed for many experiments in AM radio. Later efforts at the facility were directed toward perfecting FM and television transmission.

Relax, Jerry....

I haven't seen anyone from RRB post into uk.media.* before and I don't know if
there are a lot of flamewars over there, but we try to keep them to a minimum
in RRB. If you guys want to start a flamewar, do it in other newsgroups, not in
rec.radio.broadcasting (unless you want me to just start dropping your rrb posts).

Thanks
   **Steve (rec.radio.broadcasting moderator)

The only Fox broadcast network program produced by Fox News at this time is "Fox News Sunday," the Sunday morning discussion show presently hosted by Chris Wallace.  They did do a magazine show a couple of years that ran during the summer, but bombed in the ratings.

In addition, the Fox affiliates can buy a news service from Fox called "Fox News Edge," which repackages FNC and Fox affil coverage and offers live shots and custom coverage, similar to CNN's Newswatch service to broadcast stations (amusingly, some Fox affils continue to subscribe to CNN Newswatch).  This also gives the stations the option of airing FNC for event or breaking coverage, once again like the CNN service.

The Independent
01 November 2004

The Dread Broadcasting Corporation was set up towards the end of 1979, shortly after Margaret Thatcher came to power. While the population at large seemed to embrace the new capitalist mood, I recall that things remained pretty bleak for the average black Joe or Josephine. Their sense of exclusion was reinforced by the lack of black music on the radio: we were expected to make do with the prescribed "specialist" titbits (amounting to between two and five hours a week), even in the most densely populated ethnic areas.

One listener who was unwilling to accept the status quo was my brother Lepke, the founder of DBC, which marked a new concept in British radio - the dedicated black music station. Lepke took what he thought was his only course of action and built his own radio station after acquiring a medium-wave transmitter.

By use of a 60ft high mast in the back garden of his house in Neasden, north-west London, he broadcast shows that had been pre-recorded onto cassettes. Before long, DBC had transformed London radio, airing rarely heard calypso, rhythm & blues, reggae, hi life, soca, jazz and hip hop. These showcases were fronted by a sterling cast of presenters, including the singer/ songwriter Neneh Cherry, musician Gus Dada Africa, writer Lloyd Bradley and journalist Nick Coleman (now with The Independent).

Lepke's ambition was to bring about a shift that would allow more alternative stations to operate legally within the UK's broadcasting framework.

Another important consideration for my Jamaican-born brother was the black elder; he remembered life in the Caribbean and empathised with the sense of isolation the older generations felt. He envisioned a station that they could tune in to for news, features and music from Africa and the Caribbean.

Serial exclusion tends to cause the excluded to find alternative means of expression, as with the world's first so-called "pirate radio" station, Caroline, the infamous broadcasting vessel of the mid-Sixties. Loud and proud, Radio Caroline circumnavigated our green and pleasant island, beaming over decadent sounds of freedom and rock'n'roll. Quite why they were landed with the "pirate" moniker remains a mystery, as Caroline operated in international waters.

By mooring three miles outside of British jurisdiction they were not subject to British law. So if they weren't illegal, why did they do it? Necessity, is the short answer. Georgie Fame's classic "Yeh, Yeh" - rejected by the BBC for being too "black" - was released by Caroline's founder, Ronan O'Rahilly. Unable to procure any airplay, he had turned in desperation to Radio Luxemburg. They simply showed him their packed, record company-booked play list - and then showed him the door. Before leaving, he declared: "I'll just have to start my own station, then." And he did, with Caroline, just as my brother did some 15 years later with DBC.

The creation of black alternative radio in 1979 can be compared to what happened in downtown Kingston, Jamaica, in the Fifties and early Sixties with the creation of the sound system culture. Barred from the uptown haunts, working-class entrepreneurs fashioned their own recreational spaces. Sound system owners such as Sir Coxone, Duke Reid and Prince Buster would "string up" on a piece of land - a lawn, say, or someone's yard - and let rip. Often called the dance hall, it was a place where ordinary Jamaicans could socialise.

During that time, many of the same people were lured to the UK by the promise of work and a good life in the Mother Country. On arrival, the "No Dogs, No Irish, No Blacks" signs that greeted them were a swift wake-up call. They soon realised that they faced slum housing, low wages, poor working conditions and social exclusion. Ever resourceful, they re-invented their outdoor shindigs as"blues dances". These soir�es were often held in two or three emptied rooms in an entrepreneurial household, or in an unused building that had been "captured" for the night. The host would sometimes charge a small gate fee, but the real money was made at the bar, selling curried goat, fried fish and booze.

Apart from the lucrative nature of the blues dance, it was also one of the few places where black people could meet in groups, as they used to back home. This high-decibel bonding, however, did not impress residents, local authorities or the police, who, armed with new powers, all but obliterated the dances by the late Eighties.

But the demise of the blues dance heralded a whole new method of social interaction: black radio. As well as DBC, other stations emerged, such as Horizon, Invicta, Kiss and PCRL in Birmingham, as well as newer models like Freek and Delight. Without them, key figures such as Soul II Soul, Trevor Nelson, Norman Jay, So Solid Crew, Ms Dynamite, Dizzee Rascal and countless others would not have been so easily ingested into the bowels of the mainstream.

DBC and its ilk served as a catalyst for changes in legislation, which in turn encouraged the emergence of licensed black music stations, from Choice and Jazz to Kiss (formerly an illegal broadcaster). More recently, the BBC has founded non-commercial versions in the form of the Asian Network and 1-Xtra. In my opinion, the Asian Network is one of the jewels in the BBC's digital radio crown, quite rightly designed to appeal to Asian audiences of all ages and backgrounds. I'm not sure if the same could be said for 1-Xtra, launched as "the home of new black music" in 2002 - and thereby, incredibly, ignoring two, maybe three generations. Earlier this year, 1-Xtra dropped the "new black music" tag and began labelling its output as "street music". This is worrying at a time when two of the largest commercial stations, Kiss and Choice, have been absorbed by large, national media conglomerates. Neither is recognisable as the station it was set up to be.

And so we have a situation, 25 years after the founding of DBC, where we are almost back to square one. Later this month, the broadcasting regulator Ofcom will announce more community radio licences. Whether it's Access FM for the disabled or Caribbean Folk Gospel FM for aging, first-generation West Indians, air space is available. Ofcom views the introduction of licensed community stations as "a low-cost and legal alternative for people otherwise attracted to illegal 'pirate' broadcasting, some of whom claim to be meeting a local community need on a not-for-profit basis for local social gain." It's a good start; a series of small outfits, operating locally, is the way forward in the short term, and will ultimately provide greater opportunities at the entry level of broadcasting. But what's wrong with making money too? With DBC we were given no Government or other funding, but we still found ways to generate our own income legitimately.

There has been some progress since 1979: thankfully, there is more black music on the air and more black broadcasters are in work. But can we have a big, fat, commercial, money-making station that we can hold on to? Or at the very least allow the BBC version to do what it's supposed to say on the tin. Please?

('DBC: Rebel Radio' is released by Trojan Records; Miss P appears on BBC London Live 94.9FM, on Saturdays at 10pm)

(A very interesting article by Trevor Dann, who was a producer, and later head of production, at Radio 1)

The Independent
29 October 2004

John Peel was a broadcasting legend. But his colleague Trevor Dann remembers him as a friend, a family man and a lifelong Liverpool supporter

It was like meeting the Pope, or at least the Maharishi. There we were, my friend Alan and I, two 15-year-olds queuing up to greet the great man, our hero, our mentor, our spiritual guide. As fervent listeners to the pirate Radio London, we'd learnt everything from John Peel.

We recorded The Beatles' Sergeant Pepper album when he played it all the way through without speaking. We'd gazed at the stars when he told us to, and thought good thoughts so we could change the world. He'd introduced us to Captain Beefheart, Jefferson Airplane and The Doors.

And yet here was the apotheosis of counterculture opening a summer garden-party at a girls' school in rural Derbyshire. He was in late Sixties uniform - the tie-dye T-shirt, cotton loons and plimsolls - while the school governors and the parents buzzed around in their suits and twinsets, clucking disapprovingly. Years later, he blinked in that beguiling way he had and told me why he'd gone there. "Well, Trevor, when you're on board a ship with nothing but blokes for company, an invitation to visit a girls' school is, er, quite irresistible."

He signed my copy of the programme for the f�te that day - "Love & peace, John Peel". I treasured it, and still do. But he was dismissive when I took it into Radio 1 a decade or so later. By then, I was a new radio producer and he was the venerable BBC institution who'd renounced hippiedom and embraced the energy and attitude of punk. "I used to talk a lot of bollocks in those days," he said.

John and I didn't get off to the best start at Radio 1. In my first week, I went up to the Broadcasting House continuity suite where he presented his late-night show and asked if I could watch. I didn't know that he hated what he called "broadcasting in a zoo". To make amends I got him a coffee and placed it on the desk as he leant to one side to cue up a record. As he straightened up his elbow knocked the coffee all over the faders, necessitating a rapid switch to the next studio.

Minutes later, his wife arrived. Cue another howler. "You must be Shirley," I ventured. They both laughed. I felt very uncomfortable. "No, this is Sheila," Peel said. But why had my simple mistake had such an effect? Some days later, he explained that Shirley was the name of his first wife, an American woman who Peel always claimed had beaten him up and then pursued him to Britain, where he was taking refuge with Sheila.

One of the few consolations of the tragic news from Peru this week was that Sheila was there with him. He was devoted to the Pig, as he always called her, and he wore a silver ring with a pig on it. In fact, I think John defined himself more as parent and husband than a broadcaster. In spite of his acid tongue, he was a sentimental man who'd blub at the drop of a hat, especially at family successes.

It was one of the many contradictions in Peel's life that the man who sought out angry, urban music in some of the seedier inner-city clubs lived an idyllic rural life in an isolated Suffolk cottage. From the splendidly named Nan Trues Hole - truly John's bolt hole - no other building is visible. In recent years, the BBC allowed him to broadcast his show via an ISDN line from home. He began to sound like the religious leader he was to so many of us, letting fall his pearls of wisdom from a musical Eden.

In 1983, I produced "the Peel show", as it was always called, for a few months before leaving for television. I made one change. John Walters and Chris Lycett, my predecessors, had allowed Peel to choose all his own music, but they had retained the right to assemble the tracks into a running order. In some cases, this amounted to no more than finding two songs with the same word in the title and putting them together so John could do a DJ-style link. Which, of course, he never did. So I suggested that he should do the running order in future. He looked at me with the grateful eyes of a kid meeting Santa and thanked me as effusively as if I'd given him a new toy.

I loved the opening to his show in those days. In would come the low dum-da-dum of Grinderswitch's "Picking the Blues", and after the slide guitar figure we'd be treated to the usual litany of awkward and unpronounceable band names. Regular listeners may have noticed that, for pure devilment, John would sometimes trail a band who didn't exist - "... and the Flying Creamshots in session". He'd seen the phrase in a Dutch porno mag.

He loved Holland, and regularly hosted the Pink Pop Festival. He claimed that the Dutch liked him because his name translates as John Prick. Like many of John's anecdotes it may not have been strictly true, but somehow details like that never mattered. It was just a joy to listen to his fund of stories. Life had a knack of happening to John. He always cast himself as the unworldly ing�nue at large in a cruel and unforgiving world.

Also in 1983, Radio 1 was staging a week's programming from Liverpool and someone suggested that Peel and I should make an introductory show about his home city. Persuading him to depart from the safety of the studio was a nightmare, but once he'd agreed (with the condition that his daughter and her teenage Goth friend could accompany us), he created a magical programme.

>From the passenger seat of our hired car, he guided the two girls and me around the streets of Liverpool, pointing out the key landmarks of his early life. "That's where I saw my first gig. Eddie Cochran wasn't it, oh no, it was the Obernkirchen Children's Choir singing 'Val deri, val dera'!" And: "There's the Royal Insurance where brother Frank works." And: "That's the train that takes the rich people to Heswall."

And thence to Anfield, home of his beloved Liverpool FC. He took me on the Kop - all standing and swaying in those days - and I recorded his thoughts and reactions to an FA Cup tie against unfancied Brighton. Liverpool famously lost that day, so I got nothing at all out of John except a few grunts, and nothing from the Kop characters apart from a wet trouser-leg thanks to the inebriated Scouser behind me who couldn't be bothered to fight his way to the gents.

The following morning we met Kenny Dalglish, Peel's absolute hero, for a pre-arranged interview. Dalglish gave the usual pat footballer's answers to some questions about the game, and Peel was still so depressed about the match that he couldn't bring himself to conduct a proper interview. In the end I had to ask the questions, and we dubbed in some commentary later.

That Merseyside expedition was also notable for the teenage scally John had found to talk to us about being young in Liverpool in the Eighties. We met on an estate in a pub that I thought was called The Chester, but turned out be The Jester. And we listened to tales of burglary, football violence and routine drug-use from a thoroughly engaging lad I thought no more of until I saw The Farm singing "All Together Now" on Top of the Pops. It was Peter Hooton, their lead singer. Once again, Peel the talent-spotter had been ahead of his time.

He liked to use a football metaphor when talking about his appetite for new music. Of course he was proud of Liverpool FC's championships and European Cups, but "I'm much more interested in what happens on Saturday". He found something life-affirming in the quest for novelty and the refusal to look back.

When I was producing his Radio 1 show, I asked him to play the occasional old record to help to introduce his young audience to some of the acts he had championed in the past. I argued that Smiths fans might be interested in Van Morrison or Tim Buckley if they were introduced to them by John Peel. But he would have none of it. The two hours of airtime he had every day were too precious to devote to anything other than the latest sounds from the streets, pubs and bedrooms, and from teenage Britain.

In the Eighties, I was asked to write a profile of John for a newspaper. He was a reluctant interviewee, but I managed to cobble together what I thought was a reasonable piece. When it appeared, though, he was cross with me for drawing attention to his love of driving. He didn't think it was a big part of his life, even though he spent hours at the wheel and refused to fly until only a few years ago.

I'd spent hours debating with him the fastest way to London from Suffolk. I was an advocate of the A10; he preferred the A505 right round Royston to the A1. For weeks, he would keep me informed of various time trials he'd done using different routes, all proving that he was right in the first place. How silly that we should waste so much time on something so trivial, but that was John; once the bee was in the bonnet, it just kept buzzing.

The Peel/Walters office at Egton House, the old home of Radio 1, was a shambles, hung with Christmas cards from decades earlier and packed to the ceiling with tapes and vinyl. Walters was the untidiest man in the BBC, and would never have survived in the era of open-plan offices. Peel and their faithful secretary Sue (known as Brian, in a spiffing chaps' wheeze kind of way) kept on at him, but nothing changed.

So John had to sit on his record case or the floor because there was no room for a chair. This became even more ludicrous when John had one of his famous early evening naps. The door would closegently, and the greatest living DJ would snore through two hours, wrapped around a desk leg, a bin and a pile of NMEs.

When I arrived back at Radio 1 in 1995 as the head of production, with a brief to overhaul the music policy and the on-air sound of the station, Peel was as comfortable as I'd ever seen him with the BBC management. The pop'n'prattlers were on their way out, and the new controller, Matthew Bannister, had endeared himself to Peel by making all sorts of public statements about his support for new music. I remember Peel and Andy Kershaw talking about Bannister on the radio and saying: "Well, we're safe - one day Radio 1 will sound like our shows all day long."

But John's unease with management resurfaced when the axe started to fall on people he liked. He got quite angry with me about the departure of one producer he was particularly fond of, and he took on the mantle of a stubborn trade-union leader arguing, in effect, that all change at Radio 1 was a bad thing. Underneath that friendly grumpy-old-man exterior lurked a genuine grumpy old man.

When asked about his favourite record in the 1970s, he used to talk about Link Wray's dirty and foreboding guitar solo "Rumble" and T Rex's "Ride a White Swan". He delighted in the story that when Marc Bolan made No 1 for the first time, Peel had been driving in his car and had to pull over on to the hard shoulder as his eyes filled with tears.

But for many years his choice of best record ever was "Teenage Kicks" by The Undertones, I think because it reminded him of what music is there for. Once he'd kicked the somnambulism of the acid and dope years and rediscovered beer (he always credited The Faces for re-energising him in the early Seventies), he espoused music that celebrated youth and vigour.

John Peel won hundreds of awards. But he was a genuinely reluctant celebrity; he hated what fame did to people and he had no truck with the insincerity of showbiz hangers-on. In fact, I've no doubt that if he knew that I, or indeed anyone outside a close circle of family and friends, was writing about him, he'd be coming after me with a meat cleaver. I can hear him saying so.

I was in Berlin when I heard the shocking news of John's death. Even the teletext in my hotel room put the news on their front page, which gives some indication of his worldwide reputation. Since Tuesday morning when the news broke (although it had been embargoed until 2pm), I've received dozens of texts and e-mails from friends who've been touched by the great man. One came from an old friend I haven't seen in more than 20 years. "You told me so many funny, warm stories about John," she wrote, "that I felt I knew him a bit, too, and I was thrilled when he gave me a big smile and a good morning in Diss last April." John had that effect on people. He made you feel better.

He became a broadcasting icon because he had no artifice, no style, no shtick. What you got the across the table at an Indian restaurant was what you got on the radio: passion, honesty and an understated facility for language. Younger broadcasters described as the new John Peel have come and gone for 40 years, but the original was always the best.

I suggest you do a Google search on this "George Cox" and then decide who,
if anyone, should be blocked - a (hopefully...) 'professional' troll or just
someone pointing out the facts.

By Laura B. Withers
The Winchester Star
http://www.winchesterstar.com/TheWinchesterStar/041101/Area_radio.asp

But you won't find a lengthy phone bill in his possession. Stewart talks to friends all over the world another way - using radio waves.

In the clubhouse of the Shenandoah Valley Amateur Radio Club on Winchester's Grace Street, Stewart and his ham radio buddies talk to other amateur radio enthusiasts across the globe.

Shenandoah Valley Amateur Radio Club Vice President Sam Long stands under the ham radio antennas his club uses to broadcast to the world from its headquarters on Grace Street in Winchester.

They ask questions like, "What kind of radios do you have?" and "How's the weather over there?"

After a few conversations with a contact in Iraq or China, Stewart has a new friend.

"Everybody's on a level playing field," the Winchester native said. "It doesn't matter whether you're Iraqi, or British, or Russian, or Chinese, or American - everybody is on the same level."

Ham radios have been handed down through generations. The local club began in 1948 and since then, parents and grandparents have passed on the hobby to their children and grandchildren.

But the future of ham radio hasn't always been so bright.

Amateur radio clubs often face the threat of losing their radio frequencies to commercial ventures. As the demand for AM and FM radio grows, the amateurs feel the effects of dwindling broadcast space.

Cellular phone towers also are a big concern, Stewart said. The club rents land near U.S. 522 north of Winchester, along Route 654, and members have built radio towers that help them pick up clearer frequencies.

But when cellular phone companies, such as Cingular, buy the land, the club has to move its towers to another location. And the options are limited.

When they met last month, members of the Frederick County Planning Commission discussed placing stricter rules on where ham and commercial radio towers can be built.

Some county residents say the radio towers are an eyesore.

Commissioner Charles DeHaven said some towers used for commercial and ham purposes are built too close to property lines.

The Planning Commission has been supportive of ham radio in the past. But Stewart worries the commission needs to be reminded of ham radio's role as a public service.

In addition to the social aspect of the hobby, ham radio provides backup communication in emergency situations.

During this year's hurricanes in Florida, ham radio operators sent reports to local law enforcement and safety officials.

"Time and time again, it's been the only method of communication that has worked," said Tom Sullivan, a longtime Winchester resident and ham radio operator.

Commissioner Rick Ours said if radio towers required conditional-use permits, that would give the county a chance to examine where they are being constructed.

"I certainly don't want to discourage people who do ham radio, because I think they do a great service to the community," Ours said. "I think that in general, the county does need to have some control."

If the Planning Commission wishes to address the tower issue, DeHaven said, the public will have a chance to speak on behalf of ham radio.

Stewart said he would be happy to speak to the Planning Commission and share ham radio's benefits and services.

"It's a lifelong hobby because it's always changing," Stewart said. "It's a hobby that'll take you from cradle to grave."

World's first licensed station was in Argentina, predating KDKA by several
months.

Translator rules are weird.  They can put up a 175 watt translator, but
not a 100 watt LPFM.

Peel Unplugged

No one summed up John Peel better than Peel himself. While researching a book about Radio 1, Simon Garfield got to know the enormously influential DJ, who died last week. Here he offers some favourite tales - in Peel's own words

Sunday October 31, 2004
The Observer

Six years ago, I conducted a series of interviews with John Peel at Radio 1 and in the wine bar nearby. It wasn't difficult work: I turned on the tape-recorder and sat back, and after 10 minutes of mild suspicion and Rioja he hit a groove of sad and funny stories that brought tears to his eyes and mine, and all I could do was hope the batteries were fresh.

My memory of him is of a hugely sensitive man who cared very much about his music and his family, but also about how he was regarded by others. A magazine interview he had recently given had been very harsh on him, questioning whether he genuinely liked most of the records he played, and Peel had been terribly hurt by it. Looking back, it is significant how often in our conversations he considered his standing among his peers, and how much he relished his reputation as a pariah within the corporation. This was a role he found useful to foster, but in truth he was a shy and quiet man, prone to internalising his anger. And he was immensely loyal; he knew that he could only function in public service broadcasting, and in time he became its best advertisement.

I had first met him 18 years earlier, when he provided the narration for a radio documentary I had written. I told him how thrilled I was to hear him voice my script, and was astonished when he replied that he was genuinely happy to have the extra work. The extent of his talents was not fully exploited until Home Truths many years later. His impact on so many lives has not been fully measured until the past week.

His producer and great friend John Walters, who Peel was convinced would deliver the eulogy at his funeral but died three years before him, had warned me that many of Peel's stories were embellished, and he could prove that some of them couldn't possibly be true. Peel often told him that his grandfather used to get champagne on the National Health. Walters questioned him on this, and Peel always said, 'Yes, champagne.' Eventually, the story changed. 'Oh, I asked my mum, and I muddled it up,' Peel conceded one day. 'It wasn't champagne. It was morphine.'

Peel told me that his domestic life had recently been 'complicated'. His beloved wife Sheila had a made a good recovery from her brain haemorrhage, an event he found 'unimaginably terrifying', but her eyesight had deteriorated. In addition, her mother had recently died, and her father had moved in, and their children were in various stages of leaving home. Throughout these turmoils, there was one reliable comfort. He said that everything 'seems to be all right again when I come in and start mispronouncing the names of songs'.

Here are my own favourite Peel stories from those tapes.

On discovering Elvis:

'I'm a great believer in getting your priorities wrong, setting your sights low, so that you don't go through your whole life frustrated that you never became prime minister.

As a young lad, I used to listen to the American Forces Network in Europe, coming out of Stuttgart, and to Radio Luxembourg, and the signals were always satisfyingly feeble, so that you really felt you were participating in something quite exceptional. The record that genuinely changed my life was on Two-Way Family Favourites on the BBC. It may be hard now to understand how frustrating it was to listen to the radio then, because you could often sit and listen to a programme for several hours and not hear a single record that you liked. You'd listen to things like Housewives' Choice in the morning - based on the premise, shared by Radio 1 when it started, that housewives were some sort of subnormal minority group, as if perfectly sensible women would walk down the aisle but then return as gibbering idiots.

Two-Way Family Favourites was a show that reunited our boys overseas with their families back home on a Sunday lunchtime. One afternoon I heard them say, 'Lance Bombardier Higgins has requested the first record by the new American singing sensation Elvis Presley.' On came Elvis, and it sounds idiotic to say it now, but at the time 'Heartbreak Hotel' was just a revelation, like being transported immediately to another planet. The only thing that came close was when I heard Little Richard a few weeks later. It was genuinely frightening, as if something had been unleashed on the world that would never go back in the bottle. It turned out to be the case, wonderfully.

The quest for perfection:

'I lived in the States for seven years in the Sixties. In the days before we knew about sexism, me and a couple of mates used to follow the fortunes of a young woman who performed under the name of Chris Colt, the Girl with the 45s. We used to follow her from grisly strip joint to grisly strip joint. I was driving back from a particularly exhilarating performance in New Orleans, having left my friends down there, and I was crossing what they call the Piney Woods of East Texas, which cover an area the size of Belgium, as all big woods invariably do. I was driving along this long road in the middle of the night, and the moon was at the far end, so it was like driving along a silver ribbon, if you want to be poetic about it, and the hills were rising and falling, and there was a small town before me, and on the radio came a record by Elmore James called 'Stranger Blues'. The first two lines were, 'I'm a stranger here/I just drove in your town.' I just thought it was a perfect conjuncture of time, place and music. You always hope in the course of doing a programme that somebody somewhere may experience a moment like that.'

Heroin in his hair:

'I used to run a record label, catastrophically unsuccessful, called Dandelion, named after a hamster - that's how things were in the late Sixties. We put out about 30 LPs using other people's money. There were one or two I quite like to listen to, and one or two atrocities. Stackwaddy were fantastic. They had an album called Bugger Off , which Annie Nightingale used to play a lot. They were punks before there were punks - these very primitive lads from Manchester who played a rather violent and inaccurate r'n'b. Once we got a person over from the States to see a whole load of Dandelion bands at a college in London. We made the mistake of putting Stackwaddy on first. The singer was a deserter from the army, and wore this improbable wig all the time. They turned the treble up on all their equipment, so it was like listening to a kind of buzzsaw. The singer was very drunk, and the first thing he did at the start of the gig was just walk to the edge of the stage and piss on the students.

When Radio 1 started, it was generally regarded as rather unhealthy for presenters to show any interest in music, as it was believed this would lay us open to unscrupulous promotions people offering fast cars and women. Of course these things never happened, but you did have to keep your interest in music very much to yourself. In earlier days there were times when senior management at Radio 1 seemed to be rather surprised that I walked upright and used knives and forks. I never saw my programmes as all that radical - more an alternative to what was on at other times of the day. But at one time I was regarded within the corridors of the BBC as being the Baader-Meinhof Gang of British broadcasting, and treated with a certain amount of terror.

It used to be that we had a controller, name of Muggeridge, who was joint controller of Radio 1 and 2, quite a good idea. When the BBC was looking for a man to do this job, they quite naturally chose someone who until that time had been head of the Chinese section of the BBC World Service. Once he had got the job he interviewed various DJs one after another, and I was last in. I think he thought I would do something unpredictable and startling, like rub heroin into the roots of his hair. He was sitting at his enormous desk, a sort of Dr Strangelove position. At some point in the conversation I mentioned public schools, and he brightened up a little at this idea, as if at some stage in my life I had actually met somebody who had been to a public school.

I said, 'Actually, I went to one myself.'

He went, 'Extraordinary! Which one?' He was assuming it was some minor public school somewhere on the south coast. I said, 'Shrewsbury.' He said, 'Good heavens!' At this stage he was getting quite elated. 'Which house were you in?' I told him and he said, 'How's old Brookie?'

It was clear that he thought, whatever he looks like, and whatever sort of unspeakable music he plays on the radio, he is still one of us. I think for a long time it was this factor that sustained me at the BBC.'

The bloody awful rubbish:

'At Radio 1 I try to keep myself to myself. I've always thought that avoiding office politics was a rather shrewd thing to do. I feel a bit like a person who lives in a cottage while a new estate is being built around him - so long as I can tend to my bees, I'm perfectly happy. I don't socialise that much with people here. I occasionally go to the pub or the wine bar with some of the women, because obviously they don't see me as a threat. I'm not likely to try to get off with them.

I do still see the Radio 1 thing as being what I do. Radio 4 is still seen as being the senior service, so when a couple of impeccably middle-class women call up and ask me to do a programme I'm always hugely flattered. You go off to very low-key places like Coventry to interview a family who have

19 children, and you think, 'Oh no', but then you meet them and you come away quite heartened by it all. Sometimes, if you're a regular reader of the newspapers and watch TV news programmes, you can whip yourself up into a froth of despair. So going out and finding that not everybody wants to kill you is kind of reassuring.

In 30 years there has genuinely never been an attempt by management to exert any control over my programmes, not beyond the occasional comment like, 'Ah, John, you still playing that bloody awful rubbish?' Someone from management did come down when I was playing a lot of hip hop, and then later when I was playing jungle, to inform me that I shouldn't be playing this music, because it was the music of the black criminal classes.

I think I was a handy safety valve for some time. If someone called up to complain about the safe and predictable nature of the station's playlist, someone could always tell them, 'You can always listen to John Peel. He plays strange discs.'

Tony Blackburn goes Barry Manilow:

'As a Radio 1 DJ, you were expected to do ludicrous things. We had these Radio 1 Fun Weeks, which usually consisted of travelling the country with a bunch of other DJs, and Noel Edmonds filling people's hotel rooms with chickens. In more enlightened days than ours you'd be burnt at the stake for doing that. People like Mike Read and DLT would often complain that they couldn't go anywhere without being recognised, but of course would go everywhere in a tartan suit carrying a guitar, so they would have attracted attention in a lunatic asylum.

But these things did have compensations. Perhaps the best moment for me took place in a multistorey hotel in Birmingham, in something called the Dickens Bar, lots of dark-wood booths full of people who no doubt travelled around the country selling Dickens Bars to other hotels. Tony Blackburn got up with Paul Williams, a Radio 1 producer who used to play the piano tolerably well, and sang for about half an hour. There was massive indifference to his efforts, if not downright hostility, yet he went through the whole thing as if he was Barry Manilow at the Copacabana, as if everyone was absolutely adoring everything he did. He soared in my estimation after that. I thought, 'He's not such a tosser after all.'

A particularly viscous tackle:

'Occasionally, I'd be invited to these rather serious BBC events at TV Centre. I used to dread these things, but you had to go. Quite often I was the only person from Radio 1 who was invited, probably because I had been to public school. Once I found myself sitting across the table from the Two Ronnies and thinking, 'What do I say to these bastards?'

On another occasion, I had just recorded Desert Island Discs , so I went along with Sue Lawley. When we sat down I was at a table which included Nicholas Witchell, PD James and Jonathan Powell. I turned to the bloke sitting next to me and said, 'Hello, I'm John Peel.' And he said, 'I'm John Birt, and actually we were introduced five minutes ago outside.' You don't really recover from that. After about an hour of non-conversation, I said to him something about football, and he said, 'Didn't you break your wrist playing five-a-side in Holborn about 10 years ago?' I said, 'How did you know that?' He said, 'I was the bloke that tackled you.'

People say I 'discovered' or 'made' certain bands, but I never really think of it like that. I don't have a series of notches on my bedpost. They discovered themselves really, or some record company or manager did, and what I did was what I'm paid to do - play their records on the radio. I didn't discover The Undertones or Joy Division - they made magnificent records and I played them because I loved them. The fact that most other people were not playing them is the thing, but you'd have to ask them why that was. I think I helped listeners discover the bands, and if one more person has the chance to see Misty In Roots because they heard them on one of my shows, then I'm happy about that.

I don't tend to mix with bands. I'm too shy or respectful, and I don't think I would know what to say. I don't know very much about their history. Also, there's that thing about not wanting to lower my admiration of them, which I might do if I met them, and I feel they'd certainly have a lower impression of me.'

How to make the perfect radio show:

'A lot of people working [at Radio 1], young people, come up to me and make rather un-British little speeches about how they grew up listening to my programme, which is lovely to hear, and then you can think to yourself, 'Well, perhaps you wouldn't even be working here if it wasn't for me,' and I quite like the thought of that. But even the younger ones stopped listening to the programme at some stage. It seems that people listen to the programme for a while and then stop, and often listen to the programme later on in their lives. I get letters from people who say, 'I hadn't listened to your programme for 12 years, and I was driving home the other night and heard something I thought was fantastic. I've listened every night since, and it was just how it used to be.'

Sometimes kids write in and say, 'I was listening to your programme in my bedroom the other night when I was doing my homework, and my mum came in and said, "What are you listening to?" I said, "John Peel," and she said, "Oh, I used to listen to him when I was your age."' It's nice being woven into people's lives in that way.

I always compare a good programme to surfing, not that I ever surf. When a programme goes well, you do feel you're riding along on the crest of something. You go out of the studio at the end and say, 'Wow, what a great programme!' and they say, 'Oh, it sounded like all the others to me.' But some nights you can come away feeling so desperate because you've made so many mistakes, and you go out and say, 'That was just a disaster.' And people say, 'Oh, it sounded just like all the others to me.'

I listen to bands' demo tapes almost exclusively in the car in the two-hour drive home. The ones I don't like get thrown on the floor in the passenger's area and by the end of the week they swill about. The ones I do like get thrown over my shoulder into the back seat, and then harvested at the end of the week. I know that I'm going to die trying to read the name of some band in the headlights of a car behind me, and then drive into a truck in front. People will say, 'Oh, this is the way he would have wanted to go.'

Some FM radio services in parts of the east of England have been affected after a transmitter caught fire.

The 580ft mast at Morborne, Peterborough, Cambs, caught fire on Saturday, collapsing onto transmitter buildings and neighbouring fields.

Radios 1,2, 3 and 4, BBC Radio Cambridgeshire, BBC digital radio and Classic FM were all affected, along with some mobile telephone reception.

Detectives think the fire may have been deliberate and appealed for witnesses.
Gary Martin of Cambs Police, said: "We have a number of theories and we're not resting on any particular one.

FM reception in parts of several counties has been affected

"But we need to know - was there anyone suspicious in the area or were there any bangs or fireworks or rockets flying through the air?

"Has anyone seen where the tower was ablaze - was it at the top of the tower, the middle or the bottom of the tower?"

Following the fire, an estimated 1.3m radio listeners were without an FM service.
Broadcasters are working to restore service and it is unclear how many areas are still affected.

The transmitter, which is owned by Crown Castle International, covers Cambs, and parts of Lincs, Northants, Leicestershire, Beds, Bucks and west Norfolk.

http://www.rockininquad.com

September 15, 1972 - 10:15pm. KQIV in Lake Oswego, Oregon, signed on the air at 106.7 FM. Owner, Walter J. M. Kraus, Entrepreneur, puffed on his over-sized, custom-rolled cigar and waited for the money to pour in. That never happened.

As this site develops (we started on September 18, 2004) we will tell the story of KQIV in words, pictures and sound. KQ4, as it was called, was to be the "new wave" in Portland radio that would shake the market, leaving all other radio stations behind. Progressive album rock and "Quadraphonic" sound were the tools that would shape this radio revolution. Well, that was the plan, anyway. Like many great ideas, KQ4 fell far short. We will look at KQ4's ownership, management, staff, music, promotion and more. And...have some fun doing it!

We'd love to have your input. Share your memories, send in any artwork you might have, dig out those old newspaper articles, MP3 any old airchecks and send them our way. We especially encourage input from KQ4 listeners. If you remember the station, let us know. Include "then and now" photos if you have them. We will post your thoughts anonymously if you desire.

We will be adding pages as we get the goodies. Check back on a regular basis!

Leakage happens in both directions.  I think there will be no problem
using 2-80 Mhz near BPL systems.  In fact, I recommend everyone set up
a kilowatt beacon on 10M as close as possible to them.   I think the
problems will be for the poor sods trying to get the hopelessly
ill-designed system to work as much as anything else.

By Nick Farrell
Monday 01 November 2004

One of the world's oldest radio stations is shutting its doors in favour of a brand new multi-lingual website.

Swiss Radio International was founded in 1934. The short wave public radio station was seen as a neutral voice in the middle of Europe during World War II.
However, government funding for short wave broadcasts has plummeted since the fall of the Iron Curtain and stations are being forced to compete first with satellite television and now with the Internet.

The website, http://www.swissinfo.org/, is aimed primarily at providing news and features about Switzerland in nine languages. It registers about eight million hits a month, which is no small number.

Hello all,

I am a college student working on an article for a magazine writing class about college radio stations. I am exploring the history of college radio and its role today, as an outlet for non-mainstream music and ideas, compared to the many commercial, conglomerate-run stations. I would appreciate any input on the subject - whether it be your opinion about college radio's role today or facts about the history of college radio (or anything else!) If you would be willing to help me, feel free to post a reply or e-mail me at ajhalco@bgnet.bgsu.edu. Thanks so much!

Clear Channel's KBME (Best Music Ever) is changing format to all Sports from a home-grown MYOL format (live during the day and I believe it's satellite nights and weekends).  I read about it in the Houston Chronicle last week and cannot remember the switch over date but it is early this month (November.)  I haven't heard anything about it on the station but when it hits, gray-haired listeners are sure to revolt.

KBME is home to "Hall Of Fame" DJ Paul Berlin who broke into Houston radio over 40-years ago.  Most of that time was spent with low-power rocker KNUZ-am which eventually evolved to a "Pop Standards/MOR/MYOL" format when it moved to KQUE-FM.

Also lost in the shuffle is long-time KBME morning man Scott Arthur. He's been doing mornings and has run a small PR firm since before I came to Houston in 1986.  As far as "classic MOR announcers" go, Arthur is my favorite.  He spins the "soft" hits (from the 40's to current day), and keeps his listeners entertained.  He has a "Good Morning" jingle that must be 40-years old and occasionally has SFX of a cup filling ...implying that he's serving up coffee to the listeners.

PM-driver Bob Elliot only recently took on full-time duties. He'd been doing fill-in at KBME/KQUE for years in addition to serving as the studio engineer for various Houston sports broadcast networks including the Astros.

The KBME format has jumped around a lot over the years.

When SFX bought the KQUE-fm/KNUZ-am properties in 1997 or so they moved the format back to KNUZ-am which at the time was all news...and changed the calls to KQUE-am. SFX then changed the fm format to top 40. Berlin balked at moving back to the low-power am, and his mid-day show moved to news/talk KSEV which broke format to allow Berlin to play music.

I'm kind of foggy on the other developments but SFX ended up selling the FM property to a Spanish broadcaster...or perhaps sold both to Clear Channel which in turn sold the FM to a Spanish broadcaster. Clear Channel then had KQUE-am simulcast with KKRW-FM, and moved the Pop Standards format to KBME - 790-am. I don't recall who owned the 790-am station before that or what its format was.

They then lured Berlin back to do his mid-day show.

Arthur, meanwhile, stuck with the various incarnations of the station and format through the years.

Anyone have any idea who the highest paid night DJ in America is right now?

I know there are all sorts of old stories of jocks past, but what I'm wondering about is right now.

Who is the highest paid nighttime radio Jock in AMerica?

D

But David....since 8XK goes several years further back, wouldn't that (in conjunction with the list previously provided) make that line somewhat harder to determine? Does the Argentine station in question meet the criteria that the "first" station also be one in continuous scheduled operation since?  And does it all really matter, considering that Fessenden proved that there was an audience out there, and a method to transmit audio, 14 years prior to all of it?  (Radio is a Canadian invention, by the way.  So's satellite radio...Sirius was launched, under a different name, by a Canadian, and it's only with delays that me-too XM-Radio got the head start in delivering service).

I listened SRI frequently on shortwave. Will I bother to look them up amidst the billions of websites on the internet? I doubt it.

For sale:

(The "Radio Crazy" is baaaaakkkkkk!!!) Hi!

Partial interest in fulltime Australian AM radio station CP. In the 4th largest city in the nation with city pop. of over 1.4 million. 400 watts non-directional on 1692 Khz (Expanded band). US citizens are allowed to own this class of station!

Active or inactive investors with at least $5,000 are welcome. All investors would be on the board with full voting rights if desired. No individual may exceed 49 percent. This means me too!

This is a joint venture. There is an element of risk and you could lose all or part of your investment.

The seller wants only $40,000 US for the CP and is willing to seller-finance with $10,000 US down. Please understand this is for a licensed but UNBUILT station.

I have the coverage maps showing the 10.0, 2.5 and 0.5 mv contours and will email to interested parties as a JPG file.

I dare you to even try to get a CP for an American city of over 1 million for $40,000.

Tel: (478)741-1710 in Macon, GA.

73,

Meyer Gottesman, W6GIV
aka The "Radio Crazy"

The FCC wil put 288 FM radio licences up for auction in the US, starting on Wednesday. The licences will grant the holders' authority to build commercial FM stations in certain towns and cities across the country. It is the first time in five years that FM spectrum is available. Some of the more popular licences have attracted up to 80 bidders, ranging from top of the range conglomerates, right down to enthusiastic individuals.

Most of the licences are for towns across the south, west, and midwest. 28 licenses are available for stations in Texas alone.

Yes on all counts.

The predecesor of KCBS and KPO in San Francisco - San Jose goes back well
before licensing as an experimental radio station. But it was not a
broadcasting station per se.

>From the September 16, 1946 edition of Broadcasting:

"In 1892 across a swampy southern woodland near Murray, Ky., an obscure
farmer-inventor named Nathan Stubblefield, so legend says, sent the world's

first radio message. "Hello, Rainey," are supposed to be the words he transmitted without wires to Rainey T. Wells, a young attorney and friend.

Mr. Stubblefield, however, died without recognition and Murray, which claims to be the birthplace of broadcasting, doesn't even have a station."

In 1902 Mr. Stubblefield twice demonstrated "wireless technology" before large audiences in the East, once from a steamer in the Potomac River off Georgetown. He was granted patents in 1908, but partly because of his own peculiarities, his lack of business ability and an abnormal fear that someone would steal his idea, he never commercialized it. He disappointedly retired to a hermit's cabin near Murray, where he was found dead in 1928."

I think there is a difference between "radio" and "broadcasting" which often introduces confusion into this. What we are really talking about here are broadcasting stations, not radio stations.

First we lost KRTS Classical, now the golden oldies of KBME.  KUHF (U. of Houston) still plays good music, but they fill drive time with the self-righteous NPR; not what I need while struggling through Houston's traffic.  Guess it's time to carry the CD's back and forth to work.

At the risk of being acused of unabashed self-promotion, (which it is) we have an increasing number of Internet listeners all around the world.  It's a jazzy adult standards format. You'll either love it or hate it. Visit www.kzqx.com to find out.

The Billings Gazette
November 2, 2004
Washington DC

Gary Smithwick worked as a radio announcer during high school and college.

This week, the D.C. telecommunications lawyer will try to buy a radio station.

The Federal Communications Commission (FCC) will auction 288 licenses that grant authority to build commercial FM stations in specified towns and cities across the country.

As many as 456 applicants will bid on licenses.

"It's like a lottery ticket. People see the licenses and think, 'Maybe there's an investment opportunity for me,"' said Smithwick, a former FCC attorney.

The auction, which begins Wednesday, will be the first since 1999 to sell spectrum on the FM dial, and has generated interest among radio conglomerates, regional broadcasters and individuals.

At least 47 individuals and companies, including Mr. Smithwick's B&S Broadcasting Co., have been approved by the FCC to bid on a license to build an FM station in Nassawadox, Va., a blip of a town on Virginia's Eastern Shore with 572 persons but no radio station.

The licenses most in demand are for stations in Carmel Valley, Calif., and Taft, Calif. Nearly 80 applicants have indicated they will bid on each license.

"I have been in this business a long time, and I was shocked at the number of applications for licenses," said George Reed, managing director of Media Services Group, a media brokerage firm in Jacksonville Beach, Fla.

Clear Channel Communications Inc., the nation's largest broadcasting company, with about 1,200 radio stations, filed papers with the FCC indicating it will bid on just one license - for a station in rural Manson, Iowa.

LUK Broadcasting LLC, owned by the behemoth holding company Leucadia National Corp., which earlier this year said it wanted to buy all of MCI Corp.'s outstanding stock, will bid on up to 286 licenses.

Individual investors and radio junkies also will participate in the auction. "There are �bidders� who are literally people off the street," said Todd Stansbury, a lawyer in the media group at Wiley, Rein and Fielding, a firm in the District.

He predicted the unprecedented interest in new FM stations will make the licenses costly.

"Given the fact that we've not seen an auction for five years, I would expect people to be willing to pay. The interesting part to me will be how much people are willing to pay," Mr. Stansbury said.

The 1999 auction raised $57.8 million. This year's auction could raise hundreds of millions of dollars.

Each license goes to the highest bidder. Companies participating in the auction had to pay a percentage of the value of a license on which they want to bid before the auction, and the FCC has nearly $81 million in upfront money. LUK Broadcasting has put up $10.8 million.

The FCC is holding the auction now because of demand for new radio stations. There are 6,218 commercial FM stations, but many towns and small cities are without their own broadcaster.

People have asked for stations in these 288 towns and cities because none is home to a licensed station, even though they are within range of other broadcasters, said Peter Doyle, chief of the audio division of the FCC's Media Bureau.

Towns throughout the Midwest, West and South are getting most of the new commercial FM radio stations. There are 28 licenses available for stations in Texas, 20 in Colorado, 18 in Montana and 17 in Wyoming.

The license for a station in Nassawadox is the only one available in Virginia, and no licenses are available for new stations in Maryland or the District.

The signal strength of the stations, which could open within three years, will vary from 3,000 watts to 100,000 watts, based on the classification the FCC has attached to each license.

Mr. Smithwick and his business partner, Arthur Belendiuk, aren't thinking about the type of station they want to start. They simply want to obtain a license to broadcast.

"We're pretty flexible. Will we play country music? I don't know. I don't care. What you do first is get authorization," he said.

02 November 2004

Thieves who took vital community radio equipment worth almost �2,000 have been condemned by radio bosses.

The equipment was stolen during a break-in at the Forest of Dean Radio office in Cinderford. It was used widely by people from all walks of life to make community programmes for Forest of Dean Radio.

Now the public will have to lose out until the expensive equipment can be replaced.

Among the items stolen were two grey laptop computers worth �800 each.

Forest of Dean Radio's Amanda Smith said she was really disappointed that this had happened.

She said: "Whoever it was smashed the front door to get in and they stole the laptops.

"They seemed to leave behind some of the other equipment but took those.

"The laptops are used by people who come in to make community packages, so really they stole them from the community.

"I just think it's terrible and whoever did it needs to realise that they did that."

The station has been on air since July 2002 with several live broadcasts each week and an information loop going out at all other times.

It offers a mix of community-based programmes, including local and national news, current affairs, sport and youth issues.

The equipment that was stolen during the burglary is very important in the day-to-day running of the station.

Forest of Dean police say they are looking into the incident and they are appealing for witnesses to come forward.

Police spokeswoman Zoe Young said: "We received a call at about 7am on Saturday, October 23, to say that there had been a break-in at Forest of Dean Radio.

"It had been broken into some time overnight between Friday and Saturday morning.

"Offenders had smashed the front door to gain access and a number of items were stolen.

"These included two ACA laptops, grey in colour and worth �800 each, a Sony CD writer valued at �250 and a blue audio interface worth �50.

"We are appealing for witnesses to the incident to come forward.

"We would also like to hear from anyone who has been offered these items at a low price."

Anyone with information about the burglary should contact Gloucestershire Police on 0845 090 1234 or Crimestoppers anonymously on 0800 555 111.

And Worldspace predates Sirius and XM by a bit.  Worldspace is the "other"
sat broadcaster with hdqtrs in Washington, DC.

Hi, all!

Just received the new Passport to WorldBand Radio 2005 edition and herewith some comments:

For me, better than last year. (If anybody recalls, last year I was one of the few people that got a defective copy with missing and duplicated pages in the "blue pages" section; that was promptly replaced by Grove upon my report of that. I also had some correspondence regarding the out-of-date program-schedule info for the BBC that had not been updated since the 2003 edition; that turned out to be due to problems (family deaths, etc.) at the production company.)

First thing I looked at in the Blue Pages was to see if they were listing RN's new and unusual "9345 kHz" South Asian English frequency from Tashkent at 1400-1600 UT. It's not there. Guess RN decided on and publicized that too late for inclusion in the database. Irritating but understandable.

The one thing that does annoy me of what I've noticed so far is that there is no mention of RCI's mid-day to the Americas service in the "What's On" section. That provides great CBC programming to the greater part of the US, an area that cannot reliably get this programming via medium wave stations from across the border. It is certainly worthy of mention. (Even if PWBR is intended as a worldwide publication, isn't the US readership their main audience?)

These RCI broadcasts *ARE* listed in the Blue Pages. As a matter of fact, since I had not gotten the new schedule info for RCI after 10/31, I had to tune around on an analog radio to find it on 15180 kHz and then verify it on my Satellit 800, and then found it listed in the Blue Pages. It would have been easier if PWBR had mentioned this and cited the 17765 Summer and 15180 Winter frequencies in the appropriately-timed (2000 UT range) "What's On" entries, which now only contain some RCI entries for other-area-directed broadcasts.

The other thing I noticed in the "What's On" section is that the person doing the BBC-program notes seems to dislike or ignore what I find to be the best stuff on the BBC, the science programs Discovery and Science In Action. Every time he refers to the time blocks when these are aired, he repeats the mention of other programs in that weekday-daily "science block", Health Matters and One Planet, but never mentions the others. Why repeat the same words when one could vary the text? And why not mention that this IS a "science block", when the BBC on-air announcements refer to it in a similar way?

The receiver-review section pleased me in that it contains reviews for many of the newly-available little cheapy Chinese SW radios. They are limiting it to digital-readout ones only, which is, I suppose, reasonable, though it pains my completionist soul. I was glad to read a thorough pan of the Coby model that had been found at Big Lots by some in mid-2004, and which I missed. But since it is described as being so utterly bad, I am now quite content that I never bought any. The omission of analog-tuned models, though, meant that there is no mention of the Walgreens-sold "Lifelong" teensy-tiny AM/FM/SW radio, listing for $20 and recently on sale at $15. The important thing about that one is that it is an introduction to SW radios for millions in the US, who will never go to Radio Shack and see any other SW radio, but who will see this thing in the Walgreens Drug ads that blanket much of the nation. Even the ubiquitous Bell+Howell isn't as widely seen; only those who get the mail-order catalogs that list that are exposed to that model. I wish it had been reviewed, too. My experience with the Bell+Howell showed it to be pretty wretched, and that kept me from buying the Lifelong since it is even smaller and I expected it to be as bad. But I'd like to see some objective evaluation and am willing to be proved wrong.

The other minor nit about the receiver-review section is that they are repeating the use of manufacturer-supplied graphics of the Grundig/Eton/Tecsun Satellit 800 that show impossible displays on the radio's LCD screen (simultaneous FM-only and SW-only indicators turned on, for example) instead of taking their own pictures showing real-life displays. All the ads do the same, of course, so it isn't unusual. Speaking of ads, the repetition of the same Eton ads over and over and over gets a bit old. I realize their selling the ad space keeps the book's cost down, but some variation from ad to ad would be appreciated.

Anybody else out there have comments about the book? While this might read as if my impression is negative, it isn't. I do like it enough to buy it every year with my own money, after all. I just think that it could be better (if the producers thought more like me :-).

73 and regards, Will Martin (St. Louis, MO)

I enjoyed Spinner - but netscape took over, and You have to have the AOL
broadband to use it. Not possible in Denmark.
Now, what can You recommend instead? I want music online, where I can - like
in Spinner - choose the style - blues, disco, rock, whatever - in a god
quality. Easy to use, nice to listen too, without having to go through a
bunch of adds to get there.
Your recommendations?

I purchased this Roady 2 radio few months ago with the hope of receiving the free "home antenna kit" rebate they were offering at the time. Now it has been more than 9 weeks and I still haven't received it. They said it was in back order. OK. I just now called XM radio rep to deactivate my XM radio service for 6 month, maybe more, to compensate this, which I consider as a loss.

Company should do what they promise, thats's it. Tired of those prolong, unrealized rebate games.

Tim Luckhurst
The Times

Behind the deluge of tributes to John Peel lies a phenomenon not entirely explained by Peel's charm and talent. It was previously apparent when the Today programme presenter, Brian Redhead, died in 1993.

Both men were proof of the incomparable intimacy of radio broadcasting. Millions of Britons sincerely believe that they knew Redhead and Peel. That is because radio streams into their homes, cars and workplaces untrammelled by the requirement to sit before a screen. It is a companion that stays with us while we do other things. We adore its constant presence as well as its capacity to stimulate and inform.

Now this relationship is threatened. The Culture Secretary is considering switching off analogue radio. Driven by the same fiscal imperatives that have persuaded it to promote gambling, the Government wants to convert Britain to exclusively digital listening.

This should not be perceived, as manufacturers of radio sets want it to be, as a laudable commitment to modernity. Nor should the excellent sound quality and enhanced range of stations made available by digital audio broadcasting persuade us that the future of radio must be entirely digital.

As long wave survived the arrival of medium wave and medium wave lived through the birth of FM, analogue radio must continue alongside digital. If it does not, 150 million analogue sets will be rendered useless. The cheap technology that allows us to have a separate set in each room and to avoid retuning by keeping a dedicated receiver for each of our favourite channels will be made obsolete.

Digital radios will become less costly, but they will never be as cheap as basic trannies. Digital sets are too complex and expensive for traditional early adopters. There will not be digital radios in every room. It will be reduced to the "appointment to view" status that renders television less popular than radio.

Switching off analogue radio would be like murdering a friend. The average of 22 hours listening a week by British adults would fall and advertising revenues with it.

Let digital radio thrive, Secretary of State, but not by assassinating analogue. That will deprive us of new John Peels and provoke fury throughout the land.

(Tim Luckhurst is the author of This is Today, a Biography of the Today Programme)

Way too much on the reserve.  Of course, that would be the case at any price,
since
you could buy good used audio equipment for much less than his reserve, and it
would
be built for the work.  That console would be a bear to actually use.  Even in the
40's sound boards were sloped for ease of operation.  And he's running FOUR
Hamiltons
(he says he's got them set up so that they're synced)?  Isn't 4-times-100mW
something
in excess of 100mW?  The turntables reek, too.  Russcos (well, Gates' knockoffs of
them) went out when the last tube in the studio was tossed out...which even in the
last stations to do so, would have been 20 years ago..

By Douglas Wolk
MSN
Thursday, Oct. 28, 2004

On a memorial broadcast for John Peel-who died of a heart attack on Oct. 25 at the age of 65-BBC radio host Mary Anne Hobbs called him "the single most important man that global musical culture has ever seen." That may not be quite true. But the music world's overwhelming grief over the death of the BBC Radio 1 disc jockey suggests that Peel was right up there-remarkably, for someone who was not a musician himself. Scores of record-collecting geeks are convinced that if you just put them on the radio, they, too, would influence what everyone else listens to. But Peel actually did it-without seeming arrogant about his taste or knowledge-and he was usually three steps ahead of everyone else. Decades after he should, by rights, have become the comfortable old fogey whose persona he affected on air, he was still tracking down and championing the new and newer-than-new.

It's no surprise that the Brits who grew up listening to Peel's twice- or thrice-weekly shows have been filling message boards with their fond memories of him. What is surprising is that Americans are doing the same-far more than for the Californian garage-rock standard-bearer and rock historian Greg Shaw, who passed away Oct. 19. There could hardly be a lower-profile job in America than British radio announcer; most of those mourning Peel in the United States probably can't name two other BBC hosts. And, aside from a short-lived syndicated program in the early '90s, Peel hadn't appeared on American radio since he spent a few years in the States in the mid-'60s.

American music fans listened to him anyway-via the Internet broadcast of his BBC show and, before that, shortwave broadcasts of his BBC World Service program and tapes forwarded by kindly friends in the United Kingdom. We sought Peel's shows out because he seemed to know about all the good stuff before anybody else. He waved the flag for David Bowie, Nirvana, T. Rex, the

Smiths, the Cure, and the White Stripes long before virtually anyone else had heard of them; Elton John, Black Sabbath, New Order, and hundreds of lesser-known bands tell stories about Peel giving them a hand at the beginning of their careers. Every Peel broadcast seemed to include a couple of homemade records that somebody had pressed in an edition of 400 copies, for which he'd carefully read out a mail-order address.

He was famously inept with mechanical equipment-one listener wrote in to DJ Steve Lamacq's Peel-memorial broadcast, asking him to play something at the wrong speed in tribute to John. (The fifth clip on this blog features Peel on the air last year turning down his own voice instead of a record.) And he could be dryly snarky about music he didn't like. A possibly apocryphal story: Following George Michael and Aretha Franklin's performance of "I Knew You Were Waiting (For Me)" on the TV show Top of the Pops, Peel quipped, "You know, Aretha Franklin can make any old rubbish sound good, and I think she just has." Still, it's very like him that there's a compliment concealed inside that put-down.

DJing is, of course, an ephemeral art. But Peel got his name out beyond the BBC's transmitter range with the "Peel Sessions": four-song recordings made for his show at the BBC's studios in a single morning or afternoon. Until 1988, the British Musicians' Union had an agreement with the BBC that only a certain number of hours of commercial recordings could be broadcast each day, and all other music had to be specifically commissioned for the radio. Peel invited very raw, very promising artists to record for him; by the late '70s, a particularly good Peel session could instantly popularize a band. In the mid-'80s, the Strange Fruit label started issuing dozens of the best as EPs and albums and spread Peel's reputation overseas.

That reputation had developed in the late '70s, when Peel caught on to punk rock and induced virtually every good band from the scene to come by for a session or two. (Gang of Four recorded this scorching version of "At Home He's a Tourist" in July 1979.) Punk and post-punk became the core of Peel's show for many years and provided him with his all-time favorite band, Manchester's eccentric and prolific Fall, who recorded several dozen sessions for him over 26 years (here's "C 'N' C/Hassle Schmuk," from March 1981). Eventually, Peel's voice seemed like a natural part of the sound of post-punk. When the Monochrome Set compiled Volume, Contrast, Brilliance ..., a 1983 collection of their sessions and singles, they included snippets of Peel's on-air chatter about them.

But Peel carefully avoided becoming a relic of that historical moment: He was also an early adopter of hip-hop in the early '80s, electronic dance music in the early '90s, and the British grime scene in the last couple of years. Although he generally favored music from the U.K., when American indie rock blossomed in the early '90s, he glommed on to that, too; Pavement recorded a great Peel session (featuring "Circa 1762") the month their first album was released.

Even in his 60s, Peel had the instinct for novelty of a 17-year-old music fanatic-his undying fondness for late-'80s grind-core bands like Extreme Noise Terror and Napalm Death was something of a joke among his listeners, few of whom shared it. (This page includes an MP3 of Peel reading a listener's request to address the "disappointing lack of loud, noisy, three-second-long records that go bleeraugh! and then abruptly end.") He played Jamaican and African records he happened to like all the time, without much mind to their significance as "world music." And he had a knack for surprises: In early 1977, with punk busting out, he presented an exquisite session of unaccompanied traditional ballads by folk singer June Tabor (including this version of "Lord Bateman"). Peel was exactly what DJs should be and almost never are: an ideal Sherpa guide to the mountain of music. Nobody liked everything he played, but he was the rare listener who was immediately open to anything; as the range of pop music exploded over the last 35 years, that made him the one DJ we could trust to make sense of it all.

(Douglas Wolk is the author of Live at the Apollo).

Doesn't FOX also have a broadcast division, which affiliates pick up?  Or is that
Sinclair?  I don't know, as I don't watch the Fox station here, which is owned by
Sinclair.  All I know is that what used to be a fairly decent newscast has now
been
taken over by the parent company's agenda, making the national segment of this
newscast worthless.

It's a translator/booster to improve the 98.5 signal in the downtown
areas of Kalamazoo.  I never had a problem hearing WNWN-FM in downtown
Kalamazoo in the car, but it might be necessary to help penetration into
some buildings.

There is no way that they could put a full power station on 95.5.

Charlie

http://svartifoss2.fcc.gov/cgi-bin/ws.exe/prod/cdbs/forms/prod/cdbsmenu.hts?context=25&appn=100679575&formid=349&fac_num=145136

It's a new station, W238AL. The numbers in the call letters mean it's a "translator" station, authorized to rebroadcast the signals of some other station (in this case WNWN) but not to originate programs of its own.

Apparently WNWN doesn't feel their 98.5 transmitter has a strong enough signal in some parts of the Portage area.

It's called a translator.  W238AL to be exact.

>So what's the deal? Is it my radios or are they going to put a new station
>in the 95.5 spot?

They can't.  W238AL can only rebroadcast a full power station.  In this case, it gives a better signal to the Kalamazoo area than the 98.5 main station.

I don't think you should get too concerned at this stage.  There are
no specific plans to end analogue, no dates announced.  I think you
can assume that the same principle will apply as with TV, that the
analogue service will not be switched off until nearly everyone can
get digital, which is certainly not the case at the moment.  I spoke
to someone at the BBC only last week, who said that FM would be with
us for a long time to come.

Your suggestion that digital sound quality is 'excellent' might not
might not attract universal approval in this group.  You say that
digital sets will never be as cheap as analogue but given the advance
in electronics (look at the pace of development of computers and
digital cameras for example) so they may well be as cheap in the
distant future.

Scott

How much would it cost to replace 99% of vehicle radios with digital versions?

This government forced rush to digital can be seen in the BBC campaign running at the moment. They are pushing how excellent digital radio is without pointing out the defects.

Most of the channels are in mono. The bit rate is lower than it should be, meaning that there is more chance of the odd tree causing a complete drop out of signal. With digital the signal is either on or off, you don't get the fade away that you do with analogue meaning that if you are on the M6 in the lake district you are more likely to get no signal at all.

Some digital channels are only on at certain times of the day, meaning you cannot receive all the advertised number of channels all the time, a bit of a con really.

The government want the current analogue frequencies sold off to make more money for the Chancellor and you can bet none of this will be used to give subsidies to the elderly or house bound so they can purchase digital sets. After all the radio is maybe the only 'friend' a OAP might have if they are partially sighted or blind.

People go on about being able to get digital radio through freeview and sky digital, great, but you cant take your TV into the garden when you are doing some gardening.

This governments rush to sell of this country's prize assets (which I count analogue as one) has to be stopped.

Reuters
Fri Oct 29, 2004

Could this be the slightest hint of a trend back to real local radio? Or is just an industry factor?

> signals on the same frequency mix together.

The open frequencies I mentioned aren't silent, but are a mish-mash of low power signals. They aren't useful in this area. A standard power transmitter would encroach on the coverage area of one or more of these stations. I'm sure there are cases in which a low power station could be allowed. The street gang FM pirate is an example of this. I don't live near where they were broadcasting, but I think I heard them. They were broadcasting rap, and I had no interest in listening. The nearest licensed station on that frequency is in LaSalle Illinois, or some such place. I doubt they have any listeners east of Aurora. There were no interference complaints.

>

> WRLL had been operating downstate.

I live within 15 miles of WRLL, and it's almost unlistenable at night after they drop power to 1 kW. Skywave comes in from all over. A much larger number of daytimers could be worked out, however.

> frequency?

That's the point.  The allowable amount of interference isn't really a technical consideration.  At one extreme, we could have a very small number of true clear channel stations.  Or we could have super saturated radio markets in which the only clear reception would be within the shadow of the station's antenna.  Allowable interference is a political consideration, not a technical one.  The government gives alot of weight to the opinions of the NAB on interference.  There's closer station spacing, more stations, and more 24 hour operations and IBOC, all with NAB backing.  The NAB didn't like the low power FM proposal, presumably on interference grounds, and we don't have it.

Image rejection is an issue.  Chicago's Ch. 23 gets an image from another station.

The FCC today released the full BPL Report and Order (R&O) it adopted just two weeks ago. While extolling the purported benefits of broadband over power line technology, the 81-page document also declares the FCC's intention to "protect licensed services from harmful interference."

I think that's correct.  We have a FOX station here, but I only tune it in
for "The Simpsons".  I don't watch much TV.  I haven't turned mine on for
over a month.

Port Vila  Presse Radio News - 29/10/04

By Radio Vanuatu
Posted Friday, October 29, 2004

Vt300,000 to the Vanuatu Broadcasting and Television Corporation (VBTC)
for a lease line between Port Vila and Luganville so that the national
radio may be received by the islands in the North. This agreement was
signed yesterday morning between the Charge d'Affairs of the French
Embassy Mr Bernard Sexe and VBTC General Manager Mr Jonas Cullwick.

Mr Cullwick said the lease of this line means that the signal of the national radio can be rebroadcast through Halo FM in Luganville. With the rebroadcast on Halo FM, the islands in the North will be able to receive the national radio.

He stated that although there is a problem with the shortwave transmitter, this is one of the means to improve broadcast to islands in the North especially. The VBTC GM said an agreement has already been sealed with TVL. The Board and Management for VBTC have expressed gratitude towards the French Ambassador Mr Jean Garbe and to Mr Sexe for the continued support by the French government. - Radio Vanuatu

They do, mostly known for shows such as "The Simpsons", "Cops", etc. I don't
know off hand if any national news from the Fox News channel ever goes
out over the air, though it might....

For those not so much into his taste in music, there's a special edition
of John Peel's Saturday morning programme 'Home Truths', presented by
Roger McGough. It's on BBC Radio 4 at 9am BST (0800 GMT). Will be
available as streamed audio from www.bbc.co.uk/ either live, or any time
via the 'Listen Again' facility.
Ian.

ARRL
October 29, 2004

A digital broadcast signal on 3995 kHz has prompted some members of the amateur community to contact ARRL to say it's QRMing the top 10 kHz of 75 meters and asking what can be done about it. Not much, as it turns out. The signal, from Deutsche Welle in Germany, is legal since radio amateurs share that part of the band with broadcasters in Region 1 (which includes Europe). The international Radio Regulations do leave the door open to request that the station reduce power or change its antenna pattern, however.

"Digital shortwave will revolutionize cross-border broadcasts and will initiate a worldwide renaissance of radio," Deutsche Welle Director General Erik Bettermann said this month during a panel discussion at Munich Media Days.

Deutsche Welle plans to gradually shut down its analog shortwave transmissions, he said, as DRM receivers became more available globally--something not anticipated until late 2005.

Although the station has been broadcasting for some time on the same frequency in conventional AM, it's attracted more notice from hams since July, when it began testing using digital format--also referred to as "DRM," (Digital Radio Mondiale, French for "Digital Radio Worldwide"). Of course, the vagaries of propagation will be a big factor as to the amount of interference US hams experience at any given time.

Radio amateurs meanwhile have been experimenting with programs such as HamDream http://www.qslnet.de/member/hb9tlk/, a DRM program adapted for Amateur Radio use by HB9TLK. It enables digital voice and data transmissions using bandwidths on the order of 2.3 to 2.5 kHz.

Oh, and as for the audio board, the channels are probably all preset, one for each source. The actual work is probably done on the computers.

Corey Deitz,
29 October 2004

The Radio Hall of Fame will induct five radio legends: Bob Edwards, Larry Lujack, Dick Purtan, L. Lowry Mays and the late Walter Winchell during a gala celebration Saturday, November 6, at The Renaissance Hotel in Chicago.

"Our 2004 inductees represent radio's diverse talent spectrum," said Bruce DuMont, founder and president of the Museum of Broadcast Communications. "Each have made a lasting impact on radio and will be enshrined for future generations to enjoy, both in our new museum and online."

Glenn Beck of Premiere Radio Networks (PRN) will host the gala broadcast and PRN will produce and distribute the broadcast ceremony nationally. The event will be heard locally in Chicago at 9 p.m. CST, Saturday, November 6, on WLS-AM (890) and WGN-AM (720). Westwood One Network talk show host and 2003 Radio Hall of Fame inductee Jim Bohannon will return as the program's announcer.

More on the 2004 Radio Hall of Fame inductees:

Bob Edwards -- Network or Syndicated, Active
During 25 years as the anchor of National Public Radio's Morning Edition, Edwards has conducted nearly 20,000 interviews with statesmen, celebrities, and sports legends. Prior to becoming host of Morning Edition, this Louisville native was co-host of NPR's All Things Considered. Edwards joined XM Satellite Radio in October to launch The Bob Edwards Show.

Larry Lujack -- Local or Regional, Pioneer
This edgy rock jock shook up WLS/Chicago and rival WCFL/Chicago during much of his 30-year career. Lujack is best known for his sarcastic wit including the humorous "Animal Stories." In 2003, he came out of retirement and returned to Chicago's WRLL where he broadcasts an early morning talk show five days a week.

Dick Purtan -- Local or Regional, Active
The morning voice on Oldies 104.3 WOMC/Detroit, Purtan is a broadcaster known for his on-air commitment to professionalism and his off-air commitment to his community. He has been a mainstay of Motor City radio for 38 years.

L. Lowry Mays -- Executive
Chairman of the board and chief executive officer of Clear Channel Worldwide, Lowry formed Clear Channel Communications in 1972. Lowry transformed what appeared to be simply a radio business into an advertising company that continues to serve local communities and advertising customers. Clear Channel currently owns more than 1200 radio stations, 36 television stations, 776,000 outdoor advertising displays and is the leading live entertainment company.

Walter Winchell -- Network or Syndicated, Pioneer
One of radio's most influential commentators in the 1930s and 1940s, Winchell pioneered modern celebrity journalism first with CBS and later on ABC. His hard-hitting commentaries, delivered in rapid-fire staccato fashion, resulted in one of the highest rated programs in radio history.

Inductees were selected through a national balloting process that included participation by radio executives, broadcast historians and members of The Radio Hall of Fame from coast to coast. The Radio Hall of Fame recognizes and showcases contemporary talent from today's diverse programming formats, as well as the pioneers who shaped the medium during its infancy. The Radio Hall of Fame web site is http://www.radiohof.org.

Scott Colothan
29/10/2004

A US radio station has allegedly bid in excess of �1million for John Peel's much reverred record collection.

The massive collection containing tens of thousands of records, and which the great man was famously forced to extend his house in Suffolk to store, was deemed "priceless" by Peel's manager Clive Selwood.

He told The Daily Mirror: "A US radio company has offered us over �1 million. The British Library are also interested."

He added: "There are tens of thousands of records. It's got all his annotations on it - three asterisks meant the record must be played."

Many people who have seen the collection were awe-struck by its sheer scale. Gaz from Supergrass told Radio 1 this week: "When I saw his record collection, it blew me away."

Despite all the speculation, it is not yet clear exactly what is going to happen to the collection.

As reported on Wednesday, Glastonbury organiser Michael Eavis announced he
is to the name the new bands tent 'The John Peel Stage.'

Is this, perhaps, to preempt the possibility of a LPFM?

# Amateur Radio Newsline(tm) Report 1420 - October 29, 2004

Amateur Radio Newsline report number 1419 with a release date of Friday, October 29, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The ARRL Executive Committee meets to discus the future of ham radio in the U-S-A and the next Solar Minimum may be a lot closer than you think. Find out more on Amateur Radio Newsline report number 1420 coming your way right now.

## RESTRUCTURING: ARRL EC MEETS TO DISCUSS BANDWIDTH AND BPL

A draft of a petition to the FCC dealing with bandwidth regulation and the latest on the B-P-L front dominated a recent meeting of the ARRL Executive Committee held October 16 in Dallas, Texas. Amateur Radio Newsline's Bruce Tennant, K6PZW, takes an in-depth look at what was discussed:

--

At the Texas gathering, ARRL Executive Committee -- better known as the E C -- devoted much of its fall session to a discussion of comments received on the League's draft FCC petition seeking regulation of subbands by bandwidth rather than by emission mode. The E C also authorized the filing of a Petition for Reconsideration in response to the Broadband over Powerline Report and Order in ET Docket 04-37, which the FCC adopted October 14. But the E C acknowledges that the drafting and filing the petition must await release of the actual Report and Order, which should happen in a few weeks. It did however authorize ARRL General Counsel Chris Imlay, W3KD, to prepare to pursue other available remedies regarding procedural and substantive defects in the B-P-L proceeding.

Responding to a synopsis of the bandwidth petition and proposed rule changes posted on the ARRL Web site, several hundred League members and others in the ham radio community offered comments and suggestions. The good news says ARRL Chief Executive Officer David Sumner, K1ZZ, is that the Executive Committee found considerable support for the concept of the petition. It also was happy to see some constructive suggestions to reduce both the impact of the changes on current amateur operations, as well as possible unintended consequences.

By way of background, earlier this year, the Executive Committee decided to make a synopsis and explanation of the petition available before filing it with the FCC. At the Dallas meeting, the E C agreed to submit several recommended amendments to the proposed rules changes to the ARRL Board of Directors for its consideration when they meet in January. These include such items as retention of rules permitting automatically controlled digital stations including packet and other digital modes in narrow H F subbands. The draft petition had proposed dropping these provisions.

Also in the digital domain the E C addressed a rule prohibiting so-called semi-automatic digital operation on frequencies below 28 MHz where phone is permitted. This addressed a concern that ''robot'' digital stations might take over the phone bands. And a segment for 3 kHz bandwidth with no phone emissions at 10.135 to 10.150 MHz to accommodate existing and planned digital operations was included.

Another item adopted was the deletion of the word "continuous" from the description of test transmissions authorized on most frequencies above 51 MHz. Lastly is simplification of proposed changes to Part 97.309 of the Commission rules. This, to clarify that FCC-licensed amateur stations may use any published digital code as long as other rules are observed.

The Leagues Dave Sumner emphasized that the recommendations address major issues raised to date but are not necessarily the last word on the draft petition.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

The ARRL's bandwidth proposals take into account the League's prior ''Novice refarming'' petition to expand some High Frequency phone bands--included in the ''omnibus'' FCC Notice of Proposed Rule Making in WT Docket 04-140. (ARRL)

**

RESTRUCTURING:  UK HAMS GET EXPANDED 40 METER PRIVILEGES

Hams in the U-K have been granted expanded privileges on the 40 meter band.  Jeremy Boot, G4NJH, is in Nottingham, England, with more:

--

Ofcom and the Radio Society of Great Britain are pleased to announce that all necessary procedures required for early access to the 7.1 to 7.2MHz spectrum for all UK radio amateurs have been finalized and that access is allowed from 01.00 UTC on Sunday 31st October 2004.  Early access is granted on a Secondary (non-interference) basis using a maximum of 26dBW (400 watts) PEP.

Notices of Variation for the U.K. Foundation, Intermediate and Full licenses have been published on the Ofcom website at http://tinyurl.com/4tuud.  It is recommended that for the time being only voice and Morse code modes are used between 7.1 and 7.2MHz. Band planning issues on MHz will be kept under regular review and will be dependent on the number of administrations granting early access to this band prior to full Primary access on 29th March 2009.

Jeremy Boot, G4NJH.

--

Thanks Jeremy.  (GB2RS)

**

## RESTRUCTURING:  AUSTRALIA LOOKS AR VOIP RULES

The Australian Communications Authority -- the A-C-A -- says that it is reviewing telecommunications regulations to cover fast-emerging voice over Internet protocol services.  In a discussion paper released about a week and a half ago, the A-C-A says that it aims to identify any regulatory challenges resulting from the increased availability of VoIP services and recommend to the government how those challenges might be met.  What affect any changes might have to ham radio VoIP interconnects in Australia is to early to assess at this time.  (WIA News)

**

## THE FUTURE:  SCIENTISTS PREDICT EARLY SOLAR MINIMUM

And some possible god news for hams tired of the rather poor High Frequency band conditions these days.  It comes from the GB2RS News Service which says that American physicist David Hathaway believes that the next solar minimum could arrive sooner than previously predicted.

GB2RS News quotes on an article on the 'Science at NASA' website.  It predicts that the next solar minimum could occur in late 2006.  That's about a year earlier than previously thought

Dr. Hathaway bases his prediction on data from the last eight solar cycles, which show that solar minimum follows the first sunspot-free day on the sun by 34 months.  In this solar cycle, the first spotless day was on 28th January this year and more recently, on 11th and 12th October, there were two more spotless days.

Hathaway goes on to state that the next solar maximum might also come early.  He is quoted as saying that solar activity intensifies rapidly after solar minimum.  That in recent cycles, the Solar Max has followed Solar Minimum by just four years.  If that is the case, the next solar maximum could be not all that far away in 2010 and a Solar Max is good news for D-Xing.  (GB2RS)

ENFORCEMENT:  CB AMP SALE BRINGS $7000 FINE

A North Jackson, Ohio equipment retailer has been dinged with a heavy fine.  This for allegedly selling those illegal 11 meter amplifiers that the C-B crowd calls footwarmers.

The noted violations involve Paladen Communications sale of external Citizens Band radio frequency power amplifiers.  In it's October 21st Forfeiture Order the FCC alleges that Paladen, which does business as the CB Shop, did willfully and repeatedly violate  Section 302(b) of the Communications Act of 1934 and Sections 2.815(b) and 2.815(c) of the Commission's Rules by making these units available to the general public.

Paladen was issued the $7,000 fine back on May 27th.  The FCC says the company never responded to the notice.  Its now been given 30 days to pay or face collection proceedings. (FCC)

**

ENFORCEMENT:  CB OPERATOR FINED $10,000 FOR UNLICENSED OPERATION

And using an illegal C-B amplifier will cost a Washington state operator some really big bucks.  This as the FCC fines Robert A. Spiry of Tacoma 10,000 for what the FCC say was operating a radio station without Commission authorization. Amateur Radio Newsline's Norm Seeley, KI7UP, has the details:

--

In its letter to Robert A. Spiry, the FCC claims that it found the amplifier as part of a follow-up investigation. This, after receiving numerous complaints from Spiry's neighbors.

On March 13th, April 2nd, October 29th and November 5th of 2002, agents from the Commission's Seattle, Washington Field Office concluded that the interference resulted from 11 meter transmissions originating from Spiry's residence and from his mobile station in his vehicle. During station inspections conducted on April 2nd and November 5th, 2002, the Seattle Office agents determined that Spiry was operating transmitters that were not FCC certified and that he was operating with a linear amplifier attached to his CB radio transmitter.

Spiry was advised that his use of unauthorized and non-certified equipment voided his blanket authority to operate his CB station. Nevertheless, the FCC says that he continued to operate the unauthorized equipment at the expense of his blanket authorization to operate his CB radio station.

On December 30th, 2002, the Seattle Office issued a Notice of Apparent Liability for Monetary Forfeiture in the amount of $10,000 to Spiry. In other words, a $10,000 fine.

In his January 15, 2003 response Spiry did not dispute the facts that lead to the fine. Instead he stated that he had ceased CB radio transmissions and had obtained an amateur radio license. The FCC database lists him as holding a Technician class license with the call sign KD7TRB. He also claimed to have removed his CB radio antenna and asserted that he was unaware that the amount of the forfeiture could be so high. He told the FCC that he was unable to pay that amount.

But in affirming the fine the FCC refers Spiry to Section 301 of the Communications Act. It says that no person shall use or operate any apparatus for the transmission of energy or communications or signals by radio within the United

States without a proper license. The FCC says that Spiry's 2002 operation of his CB radio station with transmitters that were not FCC certified and use of a linear amplifier constitutes repeated violations. It also notes that his taking down the C-B antenna and getting a ham radio ticket are not sufficient actions to negate the punishment for the original offenses.

The FCC says that Robert Spiry has not provided it with adequate financial information from which to determine his ability to pay the forfeiture. Based on this lack of information cancellation or reduction of the $10,000 fine is not warranted and that it stands as is.

For the Amateur Radio Newsline, Norm Seeley, KI7UP, Scottsdale, Arizona.

--

Spiry was given the usual 30 days to pay. If he fails to do so the FCC says that the matter may be turned over to the Department of Justice for further action. (FCC)

**

ENFORCEMENT: BROADCASTER FINED

The FCC has also issued an $8000 monetary forfeiture to Crown Communication, Inc. Cowner is the owner of an antenna structure in Hobbs, New Mexico. The FCC says that the fine is for willful and repeated violation of Section 17.50 of the Commission's Rules involving Crown's failure to maintain good visibility of the tower. The situation dates back to August 13, 2002, when an agent from the Denver Office inspected antenna structure and observed that unpainted cables attached to it precluded good visibility . (FCC)

**

ENFORCEMENT: NO LICENSE - STAY OFF THE AIR

The FCC has warned an unlicensed operator to stay off the air or face some heavy consequences. This, in a September

30th letter to Travis Lee Dameron of Stuarts Draft, Virginia.

In its warning to Dameron the FCC says that it has information indicating that he has been operating radio equipment without a license on the Two Meter Amateur Radio Band. It tells him that transmitting without a license is a violation of Section 301 of the Communications Act and will subject him to fine or imprisonment, as well as seizure of any non-certified radio transmitting equipment he may have in his possession.

Dameron was also requested to call the FCC's Riley Hollingsworth to discuss the matter. If Dameron fails to stay off the air, the fine he could face would range from $7,500 to $10,000. (FCC)

**

## RADIO RULES: FRAUDULENT STATION APPLICATIONS FILED WITH FCC

Bob Gonsett's CGC Communicator reports that a number of fraudulent Form 301 applications have been filed with the FCC this month. CGC says that the agency has even accepted for filing a number of these fake applications, and has assigned them file numbers.

One application in question was for a conventional, non-grandfathered Class B FM station. The petitioner was asking for a transmitter power level of 105 kilowatts E-R-P. This, in a Class B zone where only 50 kilowatts is allowed without a waiver request. And says CGC, there was no waiver request.

CGC adds that it appears as if the Commission is not screening these incoming Form 301 applications. This, even when there are blatant defects in some. (CGC)

**

## NAMES IN THE NEWS: MOLLY SCHREIBER DEPARTS AES

Some names in the news. First is Molly Schreiber of Amateur

Electronic Supply graphic design and marketing department who has announced her departure after 7 years with the company. The reason. Molly says she is moving to what she calls the lovely west coast adding that she will miss everyone she has dealt with during her tenure at A-E-S. October 29th was her last day with the company. (Via E-Mail)

**

NAMES IN THE NEWS: W1BKR INDUCTED INTO BROADCASTING AD CABLE HALL OF FAME

And congratulations to Bill Baker, W1BKR, on his election into the Broadcasting & Cable Hall of Fame. Bill is the chief executive of New York Public Television, which includes WNET Thirteen which is New York's flagship public television station.

Bill Baker has been head of New York Public Television since 1987. During his tenure WNET has grown and prospered, creating new program standards such as Charlie Rose, Wide Angle, Religion and Ethics NewsWeekly, and the children's math mystery series Cyberchase. Baker also established the station's Educational Resources Center, which has become America's most prolific teacher trainer in multi-media techniques, and developed its first cable channel known as MetroArts Thirteen.

Ham radio wise, W1BKR was a co-producer of the ARRL video Amateur Radio Today and his article titled Amateur Radio is Part of New Media Task Force appeared in the May issue of QST. The induction ceremony honoring W1BKR will take place on Monday, November 8th at the Waldorf Astoria Hotel in New York City. (Adapted from Shoptalk)

**

NAMES IN THE NEWS: N4MC "VANITY HQ" WEBSITE GOING AWAY

Also, Michael Carroll, N4MC, has announced that as of Thursday, October 21st he is no longer supporting the Vanity H Q website. Vanity H Q was, and for the moment still is, a point in cyberspace where you can go to research availability of United States vanity call availability or simply find out the latest issued.

According to a posting at the site, at some point in the near future the www.vanityhq.com domain will itself become inactive. N4MC says that this is not an action based upon lack of funding. Rather, its because of a shift in his personal priorities. (K2GW)

THE ARNEWSLINE SUPPORT FUND REPORT

Now with some good news here's Amateur Radio Newsline's Support Fund Administrator, Andy Jarema, N6TCQ.

--

In the month of August we heard from monthly contributor Joseph Bartzi, Jr, KC8DKF of Columbus, OH; From Indiana, the Huntington County Amateur Radio Society, K9HC: The Southwest Michigan Amateur Radio Team in Portage, K8KZO: Dean Carothers from the W4HPL repeater in Cookville, TN; Johnny Wallace, K5POP of San Antonio, TX; Albert Toering, N6TEZ of Anza, CA; Monthly contributor William Walters, WA2IBM, of San Jose; Monthly contributor Scott Hensley of the Area Communications Team, also in San Jose; Harold Hackman, W6HVH of Riverside, Brad Berryhill, WA6JJB of Anaheim Hills, The Westside ARC of Marina Del Rey and the Catalina Amateur Repeater Association, AA6DP.

A big thank you to everyone. Through your help we've been able to take care of all of the Young Ham of the Year award expenses, but of course, the newscasts go on. A reminder that Newsline is a 501c 3 California non-profit corporation. Information on how to support us is on our website at www.arnewsline.org. That address will be repeated at the end of the newscast.

I'm Andy Jarema, N6TCQ.

--

Thank you Andy. (ARNewsline(tm) Support Fund)

**

ON THE NET: JUNO FOLLOW-UP

An update now to our recent story on Internet provider Juno cutting out most of its free services using off-line mail handling software. And it comes thanks to some really intensive digging by one of our listeners who happens to be a Juno subscriber.

After hearing our story, John Vander Stel, WH6LY, of Grand Rapids, Michigan, took it upon himself to find out more. He says that contrary to our original story free account users will not have to go through another ISP to access their Juno

E-mail after December 1st.  He says that this was only made clear to him by digging into the F-A-Q about this change and then calling back to talk to another Juno phone rep.  He says that the even the first one he spoke with was not well versed in this change and provided improper information.

But all of John's work paid off for those of you who use Juno.  The good news is that Juno access software will still allow the free account user to access the Internet and go to the Juno Webmail site to access their E-mail on-line. However, the time using that connection will be counted against their 10 free hours of connect time.

We have often said that you are all an important part of the Amateur Radio Newsline team.  Our sincere thanks to John Vander Stel, WH6LY, who proves this once again.  (WH6LY)

**

## EMERGING TECHNOLOGY:  WORLDS LARGEST NANOTUBES

The University of California at Irvine announced what it calls a breakthrough engineering  discovery that is expected to have supercomputer and health care applications.  This, as researchers at the Henry Samueli School of Engineering said they have synthesized the world's longest electrically conducting nanotubes.  Nanotubes that are ten times longer than those previously created.

For those not aware, a nanotube is a memory unit made from carbon and consists of a graphite sheet seamlessly wrapped into a cylinder only a few nanometers wide.  A nanometer is one billionth of a meter or about the size of 10 atoms strung together.  The scientists who made them say that this discovery may lead to the development of extremely strong, lightweight materials and ultra dense nano-memory arrays for extremely powerful computers, ultra low-loss power transmission lines, and nano-biosensors for use in health care applications.  (Science OnLine)

**

## HAM RADIO IN SPACE:  ISS HAM STATION TEMPORARILY QRT

Ken Ransom, N5HVO confirms that the ham radio station on board the International Space Station is back on thr air in packet mode. It had been off for several days without explanation but on Wednesday, October 19th, Astronaut Leroy Chow, KE5BRW, was able to check on the radio first thing today and resolved a minor setting discrepancy. Information on its operation is on-line at www.ariss.net and www.issfanclub.com. (M5HVO)

**

WORLDBEAT: FIRST STORE AND FORWARD IN UK

Turning to he internatioal desk, word from the United Kingdom that its first unattended 'store and forward' single frequency voice relay has become operationl. It as switched on at 13.30 UTC on Saturday October 16th on 70.4375 MHz in he Europen 4 meter band. Its call sign is M-B-7-F-M and it has a maximum 'store' time of 120 seconds. The installation is located in the Chiltern Hills with 10dBW Effective Radiated Power from a dipole antenna 32 meters above ground. (GB2RS)

**

WORLDBEAT: HAM RADIO SAILING THE ANTARCTIC

Call this one ham radio across the Antarctic. It started back on September 14th, when the famed yacht "Apostol Andrey" started out to circumnavigate the area while carrying an operational ham radio station.

During the trip the yacht will travel around the shores of the Antarctica without going further to the North beyond the 60th parallel which is the border of the Antarctic region in accordance with the International Agreement. The crew will try to establish a record for penetrating sailing yachts crossing the 70th parallel of the south latitude.

And for ham radio here's the best part. The skipper of the "Apostol Andrey" is Nikolay Andrey, R3AL. He plans to be on the air from the Antarctic area starting this December and continuing through March of 2005. Andrey has the QSL cards already printed for this expedition and the ship also has an official Russian postmark onboard and a special postal stationary envelope for this expedition.

For details on the World-Wide Antarctic Program and the expedition, go to the World-Wide-Web. The spot is in cyberspace at www.ddxc.net/wap (Via E-mail)

**

## DX

In D-X, word that VA6JWT is now in Somaliland. He says that he expects to be there for at least six months and plans to operate as 6O0JT. (RSGB)

And F5PSA is in Cameroon until February of 2006. He is operating as TJ3SL in his spare time. (OPDX)

Lastly, G4JAG, is now active from Thailand as HS0ZFP. Chris can be found on 20 meters most evenings and says the best time for contacts back home to the U-K is around 18.00 UTC. For all of these stations, QSL as directed on the air. (RSGB)

**

## THAT FINAL ITEM: HAM RADIO HISTORY - A ZL MILESTONE QSO

And finally this week, a bit of history from right here, down-under. Its the story of the first ever two-way radio communication between New Zealand and England made on the 18th of October 1924 by Frank Bell of Shag Valley Station, Otago.

Back then, Frank held the callsign Z4AA and on that date, using some rather primitive home-brew ham radio equipment, he made contact with Cecil Goyder, G2SZ at the Mill Hill school in London. The CW QSO lasted for about 1 hour and dealt mainly with issues of signal quality. It was also the start of the first scheduled contact -- or sked -- between hams in the two nations. For several nights after the historic contact the two radio amateurs kept in touch.

Further details of the activities leading to the historic

QSO can be found on pages 40-41 of the NZART publication Ham Shacks, Brass Pounders & Rag chewers, A History of amateur Radio in New Zealand.  Detailed information on the actual QSO, complete with a transcript, can be found on the web pages of the Otago, Branch 30 of NZART.  To read them, just point your browser to www.qsl.net/zl4aa/ and follow the index for more. (NZART News)

No, "overwhelming grief" is another example of the Bigley factor that
Boris Johnson so rightly pointed out.  Peel was a boring unlistenable
nerd.

The whole industry was off in the third quarter, which is why nearly all industry stocks are off about 30% to 50% from their 52-week highs. Viacom was bitten by the video rental division and radio, etc., etc. Fortunately, revenues are looking up once again and this may be temporary.

Are you a member of the 'music world'? If not, you don't really know.

OTOH if the second hand snippets I've come across from the Spectator article are accurate and representative I agree the author had a point. That doesn't alter the fact that the idea of Dracula sending Boris to Liverpool to do penance is pretty damned funny.

It is indeed.

But I've not yet heard any "overwhelming grief" about Peelie, even from my devout muso friends.  There's a near unanimous liking for the guy, a sense of loss over the show, even a puzzled acceptance that someone, somewhere must have liked Home Truths. Yet _nowhere_ have I seen or heard anything remotely Bigleyesque, Dianaian or that would offend Boris Johnson.

I don't know what you taste in music is, but unless it's classical, opera or pre '60's I suspect John Peel had an influence - so to say he was an "boring unlistenable nerd" just shows how little you really know...

This week's ARRL League Letter http://www2.arrl.org/arrlletter/04/1029/
says:

"The FCC says its action will make room available to shift federal
government aeronautical mobile flight test telemetry (AMT) operations from
the 1.7 GHz band to the 2.3 GHz band by extending the primary allocation
for AMT to include an additional 10 megahertz from 2385 to 2395 MHz.
"Making the additional spectrum available for non-federal AMT will
accommodate the higher data rates needed for non-federal flight testing,"
the FCC said."

If I read this correctly this allows the flight test users to move.
They were claimed to be the reason the US could NOT have Eureka.
Or am I wrong?

True enough

Not a nerd, although I used to sometimes wake up in the early hours
with the World Service on playing some unadulterated crap only to find
out is was Peely on his WS weekly show.
I never much went for his taste in music, but as a radio presenter he
was very good, especially some of the more surreal moments on 'Home
Truths.'

Then they're not "open". And adding another signal, even a low power one, in this space would then interfere with the otherwise serviceable coverage closer in to these stations.

>> The new Chicago X-band station moved from downstate - Johnson City IIRC.
>>   A station on that frequency in Chicago would not have been allowed if
>> WRLL had been operating downstate.

> I live within 15 miles of WRLL, and it's almost unlistenable at night after
> they drop power to 1 kW.  Skywave comes in from all over.  A much larger
> number of daytimers could be worked out, however.

That doesn't make the area unserved by WRLL's nighttime pattern "open". A facility allowed to fill in this "unserved" area would interfere with the stations whose skywaves come in from all over. And the FCC no longer licenses daytimers, and all attempts to apply for one will be rejected on this criteria. As it is, the FCC is looking for daytimers below 1600 (and encourages, through policies in place) to move to the X-band, in order to clear out the congestion and permit more regional service by the full-time stations on those frequencies.

> That's the point.  The allowable amount of interference isn't really a
> technical consideration.  At one extreme, we could have a very small number
> of true clear channel stations.  Or we could have super saturated radio
> markets in which the only clear reception would be within the shadow of the
> station's antenna.  Allowable interference is a political consideration, not
> a technical one.

Actually, no.  The interference standards provide for usable coverages to the limits of receivers (very few radios will provide a listenable output at 500uV, the current protection limit for nighttime service, which affords a 26dB signal to noise ratio, give-or-take).  But protecting out to that limit means that for every 20dB increase in signal strength for the desired station (by moving closer to the transmitter) also means at least a 20dB boost in the signal to noise ratio...thus, the rural-grade 5mV/m contour would be a listenable signal.  Allowing increased interference (by raising the protected contour to, say, 2mV/m) means that a listenable signal would be obtained at the 20mVm contour....which is a metro-grade signal-strength.  So, in the interest of expanding coverage, you'd actually be reducing it.  For both the new, as well as the existing, stations.

All the details about how this is done can be found at
http://kauko.hallikainen.org/FCC/FccRules/2003/73/182/ and
http://kauko.hallikainen.org/FCC/FccRules/2003/73/37/

>> IMHO the FCC has grounds to regulate both services on content if they
>> chose to do so.  IMHO they need to either do so, or lift content
>> regulations on OTA.

Maybe so....but, for the former proposal, would you want a situation where the FCC can delve into the private affairs of these operations?  You know, the next step would be censoring telephone conversations, as the analogy holds.  Subscription services, and other non-broadcasting licensees, are not public entities.  Better that if the FCC feels obliged to limit what can be said on OTA, they feel that it's the only area where such pervue exists.  While I'm not so keen to remove those restrictions on OTA, the Canadians and other democracies have no such limits (although there's some discretion in how often the ability to say anything is exploited) and they haven't come to the end of the world.

OreganLive.com

You can climb in your car and drive from sea to shining sea in the good ol' USA, flip on the radio and hear the same old thing. Classic rock. Classic oldies. Classic country. And the ranters: right-wing, left-wing, preachers, sports nuts.

That's life in today's America after the takeover of the airwaves by media conglomerates, none of them based in Oregon. These money machines took advantage of changes in FCC rules in the 1980s that allowed corporations to control almost unlimited numbers of radio stations and make them all sound exactly the same.

But wait. There is diversity on the radio dial -- you just have to be willing to put up with lousy reception, intermittent broadcast hours and no fancy identification jingles. In fact, you may even have to get in your car and drive around to find the stations that don't sound like all the others.

They're called pirate stations, and they're all over the dial, all over the country. They're unlicensed by the FCC -- heck, the people who run them are being hunted by the FCC. Every year it shuts down 150 to 200 pirate stations, according to FCC spokesmen.

But thousands never are found. And new pirates pop up all the time.
Right here in the Portland area, in the last few weeks, local radio buffs have picked up signals from frequencies not assigned to legally licensed stations. Some report what they hear on the pdxradio.com Web site. "I heard another pirate on 98.1," wrote one listener on Oct. 13. "It was coming in like gangbusters on I-205 until I got behind Mt. Scott."

The next day someone else reported, "I also heard two signals on FM only in downtown, 89.5 and 104.5 clear as a bell."

Just last Wednesday, someone else reported: "I heard yet another pirate station. This one was on 95.1 and didn't last very long. I picked it up near the Morrison Bridge."

Who's running these illegal radio stations? And why are they taking these chances?

"When I was 14 years old I had an electronics class, and I talked my teacher into letting me build an AM transmitter," Bob Ancheta says. "A tiny, one-watt, AM transmitter. It was purely illegal, but I still did it."

Today Bob Ancheta is a broadcast veteran with 35 years of professional experience, nearly all of it at Portland radio stations. But back in 1967 he was a freshman at Portland's Madison High School, and he already knew he wanted a career on the air. The trouble was, nobody wanted to hire a kid whose voice had just changed.

"I went to the Goodwill and bought a couple turntables. I got a piece of plywood, put a bunch of switches on it and created a console, added a microphone and put an antenna on top of my parents' house." Bob even rigged up a blinking red light to attach to his antenna, using a switch from his folks' Christmas lights and a power source from his train set. "I was just into every little detail of it all, I guess."

Bob crammed his equipment into a tiny, low-ceilinged room in his parents' attic. "I'd be up there all night broadcasting," he says. "I tuned in the transmitter anywhere on the AM dial where there wasn't a station."

Bob's one watt of power carried the signal about five blocks from the Ancheta home at Northeast 72nd and Prescott. His neighbors became his fans. "They'd come over, and I'd interview them. The neighborhood kids came up with my nickname, The Big B.A." He carried the nickname into his professional career.

After word spread at Madison High, teenagers would drive around Bob's neighborhood to listen to the Top 40 hits he spun. "You'd see cars parked out in front and know you had a listener."

His parents were patient to a point. Bob says he knew his station was illegal, but his parents didn't. They were upset about other aspects of the operation. "They hated it when the request line would ring at 2 in the morning," he says. He found a solution: "I'd unplug their phone from the wall in their room when they were sleeping."

Safety also was a concern. "I was always climbing on the roof, hammering things. My father would freak out over that. He thought I was going to burn the house down, with all the wiring around there. My mother would stand between us, saying 'Let him do it.' "

But his mother couldn't protect him from his father's protests when the radio signal interfered with his father's favorite TV program. "Frank Bonnema," Bob says, "was the wrestling guy on Channel 12. I had to turn the transmitter off so he could see his show."

Bob had friends who set up their own pirate stations. There were a lot of them. "One had an FM station in North Portland. He turned it on and they were listening to him at Mount Hood. Eventually the FCC caught him and shut him down and took all his equipment."

Wasn't Bob afraid his house would be raided? "When you're 14 years old, you're not thinking legal anything. You're thinking about having fun and breaking a few rules."

Bob never got caught. "But I did convince a lot of record companies I was a real radio station. I came up with stationery with fake call letters and sent requests out to hundreds of record companies. All of a sudden free records started rolling in."

He still has those old 45s.

During his senior year in high school, Bob got his first job at a real radio station: KVAN. He shut down operation in his attic. Today he owns internetjock.com, an online voice-over business. But on Sunday nights he's in front of a microphone at KINK (102), hosting a blues show. Just like the old days, he's leaning into the microphone in the dead of the night, talking to people he can't see, playing music he loves.

There's a mystique to pirate radio stations. There's something appealing about a little guy trying to evade the big, bad government agency that's tracking him down with sophisticated electronic equipment.

Others talk about freedom-of-speech issues. Some say the airwaves should belong to the people, not wealthy corporations.

Of course, pirate stations can cause real problems for professional stations when they interfere with signals. But a lot of people in radio admit they got their start in their own attics or garages.

Who's running the pirate stations in Portland these days? You tell me.
Listen closely; maybe you'll recognize a voice.

Interesting photos of the ship, studios and Mike West at
http://www.tv.aland.fi/

Although the ship is in Finland the website is in the Swedish as it is the language of the area. I have just received the following translation:

"A quick translation gives this (it's in Swedish - Finnish is a completely different thing).

During the last two weeks it has happened more within radio then during the last two years. See this program and get updated! We have met Fredrik Karlstr�m, Donny Isaksson and Eva Gyllander on the new Steel FM and RixFM �land, that will start broadcasting on November 15. We have also been on the islands radiostation, and met radioboss Astrid Olhagen. Lantr�det (I am not sure about that title as it is a title used in Finland, not in Sweden. But it is a political title) Roger Nordlund gives his view on the radio coverage of the political powers.

On the radioship is the legendary Mike Spenser from Brooklyn, New York still housed. Pirate Radio 603 Am is already known far outside the borders of �land. Visit "Massmedialt" and see what Mike Spenser has to tell. You will also meet ex colleague of Mike Spenser, DJ Mike West from Cyprus. In a cabin on V�rd�, TV �land, as the first media, has met the man who might lead the future mediumwavestation. The program is produced by Mats Granes�ter and Kalle Wetterstr�m.

The rest is about when the program will be broadcast.

73

Sven Ohlsson
Sweden"

Do they really sound like stereo, or is it just that it says "stereo" in the
display?

So what are HMG going to do with the medium and long wave bands? The rest of Europe will presumably continue to use this space, so if there is no use made of it, maybe we could get a resurgence of pirate radio,, but if it is used, this will presumably blot out continental stations, which amounts to censorship.... but of course this is our control-freak government.

Perverse verses, putrid poetry, diabolical doggerel...

This makes no sense: classical music and opera have been written since
the 1960s.

Originator of this newsgroup rec.radio.broadcasting
Founder of Airwaves.com
1956-1999

http://www.airwaves.com/

Welcome to the "new and hopefully improved" Airwaves.com.

This site has been created with two goals in mind:
To serve the broadcast community with broadcast related resources. This was
Bill Pfeiffer's first priority. Bill always put his own opinions and agendas
aside to make the Airwaves digests and website a truly free and open forum

for broadcasters.

To keep the memory of Bill Pfeiffer alive. Bill Pfeiffer was in love with radio. He would drive from city to city, state to state looking at towers and airchecking stations. Bill had no children, but maybe through this website we can inspire another generation to marvel at radio and the possibilities that are created by a microphone and a tower.

There's no evidence the Chicago street gang FM pirate ever took one listener
away from any licensed station.  Their signal was lost in the noiise a few
miles from their transmitter.  The nearest licensed station was over 60
miles away.  The FM pirate was playing rap, much of it was offensive, and
there were no complaints

>
> >> The new Chicago X-band station moved from downstate - Johnson City

Of course not.  But it does indicate that the FCC's interference standard is
weak.  If the FCC had a strong stand on interference, WRLL wouldn't exist as
it is in either Chicago or Johnson City.  Given the interference and power
situation, it's practically a daytimer for most of it's listeners anyway.

>  And the FCC no longer licenses daytimers, and all
> attempts to apply for one will be rejected on this criteria.  As it is,
the FCC is

The irony is the Xband is best suited to daytimers.  Or true clear channel
24 hour operations.  As it is, it's a mess at night.

>

noise ratio,
> give-or-take).

What is the noise in the signal to noise factor?  Do they take into account
the cochannel interference, or they just assuming natural plus manmade
backround noise?  On nearly all AM nighttime frequencies, the cochannel
interference is much stronger than the backround noise.

And there are very few FM frequencies which go down to the backround noise
anymore.

>But protecting out to that limit means that for every 20dB increase

So, in the
> interest of expanding coverage, you'd actually be reducing it.  For both
the new, as
> well as the existing, stations.

I think we're saying the same thing here.  I said:

"Or we could have super saturated radio markets in which the only clear
reception would be within the shadow of the station's antenna."

Which sounds much like:

"Allowing increased interference (by raising the protected contour to, say,
2mV/m) means that a listenable signal would be obtained at the 20mVm
contour....which is a metro-grade signal-strength."

If the FCC really wanted to take a stronger stand on interference, it could

bring back it's older interference standards with wider frequency spacing
between stations in the same market,  fewer AM nighttimers and fewer
stations overall.

If the FCC wanted to take a near absolutist stand on interference, they
could get rid of about 75%  of the stations.  The remaining stations would
have a much wider coverage area.

The FCC has neither a wide open stand on interference nor a absolutist stand
on interference.  The current standard is a comprimise with elements of both
technology and politics.  I belive politics is the bigger factor.  The NAB
didn't like the old interference standards, so we have new standards.  The
NAB and NPR didn't like the low power FM proposal, so they screamed
"interference!".  I think there's plenty of room for low power 10 to 1000
watt FMers which would serve a community.

What about OTA subscription services?  The used to be pay TV stations in
areas which weren't wired up with cable.

Suppose IBOC AM flops, and Clear Channel converts their digital sidebands
into a subscription service.  Should those stations be allowed the same
speech rights as satellite stations?

By Anthony Barnes, Arts and Media Correspondent
The Indepedent
31 October 2004

The broadcaster John Peel held discussions with the British Library about leaving his extraordinary record collection to the nation prior to his death last week.

The Radio 1 DJ, one of the most influential figures in music over the past four decades, amassed an unrivalled array of vinyl, CDs and tapes from around the world. His exhaustive collection, made up of many of the bands he loved such as the Fall, the Undertones and obscure African acts as well as early demos from bands that went on to make it big, ran to hundreds of thousands, all carefully stored in alphabetical order.

It would be the biggest and most important batch of material ever deposited with the national Sound Archive, which is held by the British Library. It is not clear what will happen to Peel's collection because his will has not yet been made public, if indeed he made one.
Peel's widow, Sheila, and other members of the family are still in Peru, where he died of a heart attack on Monday while on a working holiday. They are arranging the return of his body and are expected back in the UK early this week.

The archive's curator for popular music, Andy Linehan, visited the DJ at his home in Suffolk to examine the stack of music which had to be housed in a purpose-built extension owing to its size. "It's a fantastic collection. The nature of the material that was sent to him was the kind of stuff that we couldn't possibly get hold of," he said.

The Sound Archive, largely housed at the library in St Pancras, London, runs to around 2.5 million important recordings. Unlike the library of print publications, there is no legal requirement to deposit material, so it relies on donations and acquisitions.

Peel had been a tireless champion of new music from the days of mid-1960s psychedelia when he first began broadcasting in the UK as a pirate DJ. His enthusiasm helped many of the world's biggest bands find an audience, including Led Zeppelin, Nirvana and the White Stripes, during his 37 years at Radio 1.
His death at 65 left the music world in mourning and prompted glowing eulogies from those who are indebted to his patronage such as Elvis Costello, Feargal Sharkey and Jarvis Cocker. His friend Roger McGough yesterday presented a special edition of Home Truths, the Radio 4 series Peel created looking at the quirks and strains of family life. It featured some of the most memorable moments from the show.

Peel's long-time manager, Clive Selwood, confirmed the discussions with the British Library. "The idea certainly had favour with him, but we'll just have to see what happens. We would have to act in the best interests of the family. It should stay in England, but I've got to try to look after the interests of the family. This was his great asset. He was never a great saver of money."

of
: voices and opinions?

Is this a rhetorical question or what? That's the first thing taught in
Mass Media 101. There is a limited amount of spectrum space available for
utilization. That's one of the reasons why the FCC was (supposedly)
created (I remember when the FCC was NOT a lap dog for the broadcasters).
To manage a natural resource which supposedly belongs to the people
(although that is now empty rhetoric). The same conditions hardly apply to
the printed media.

:
: What are the details of this rewrite? The old fairness doctrine was a
club

: for partisians and others with an ax to grind.  How would the new fairness
: doctrine keep the political partisans and kooks from harassing media
: stations with nusiance complaints?  Who would define what a nuisance
: complaint is?

so what do we have now? Rushbo "Oxy" Limpballs 24/7

:
: Should this new fairness doctrine cover internet radio, satellite radio,
: satellite TV, and cable TV?

no

:
: Yeah, people listen to what they want to listen to.  I have no idea if the
: IQ factor is up or down.  I am sure people would be stupid to be listening
: to things they don't want to listen to.

The people listen to what the corporate Crud Channel goons (and their ilk) shovel out of the broadcast latrine.

:
: I am also sure there has never been as much bad radio as there is now.
: There has never been as much radio as there is now.    There are more
: stations broadcasting more hours than ever before.  Too bad.  As a radio
: hobbyist, I miss the days of easy coast to coast dx'ing.

The FCC responded to what the broadcasters wanted and now both AM & FM have been technically ghettoized.

:
:
: I dislike most of the stuff on the radio.  So what?  There's still plenty to
: listen to.  Nobody makes me listen to Limbaigh, and I don't.  I can't stand
: Sport Babble but I don't have to.  Mostly I listen to a local FM Jazz
: station and US domestic shortwave radio.  For me, radio has never been more
: entertaining.  There are also some local Spanish and Polish language AM
: stations here with good music.  Very little of this was around 30 years ago.

Yup. There's sure al ot of cariety. A "classic rock" and "hot hits" and "modern country" station in every town. All voice tracked with the same 20 minute spot load anmd 200 song playlist. And news? What is that? Where did it go?

:
: When was there more radio diversity?  When there were three of four radio
: networks, each playing their own similar so-so comedies or dramas?  When
: each of  the top 40 stations in the US were playing "Muskrat Love"?  The
: radio industry is like the rest of the entertainment industry.  As soon
as
: somebody comes up with an idea which grabs a part of the audience, that
idea
: gets reused over and over in each market.

See above. You are equating quantity with diversity. I laugh at the way "top 40" has been fractionalized into "classic rock ("B" side losers)," "hits of the 60s & 70s," "alternative," and the latest insanity, "old school, "  ad nauseum. Give me a break!  That is hardly diversity.

Diversity and creative died about 15 years ago. About the time the big push for deregulation began.

:
: If that's true, then the problem will fix itself.  These overpriced radio
: stations will soon go for giveaway prices.  You'll buy a radio station
and
: so will I.  I will realize that your programming ideas are so good, I'll
: copy them all!!

That's the whole point! YOU can't buy a radio station and neither can I. Radio stations have become so overpriced thanks to the accumulation of corporate control that few single ownership outlets remain. I love having all my programming delivered voice tracked from some studio 1500 miles away. The problem is solving itself: radio is dying.

Hi,

Regalis, also known as Superviagra or Cialis
- half a pill Lasts all weekend
- Has less sideeffects
- Has higher success rate

Now you can buy Regalis, for over 70% cheaper than the equivilent brand for sale in US

We ship world wide, and no prescription is required!!

Even if you're not impotent, Regalis will increase size, pleasure and power!

Try it today you wont regret!

Get it here: http://rxand-more.com/sup/

Best regards,
Jeremy Stones

No thanks: http://rxand-more.com/rm.html

That shouldn't be all that shocking. If it was a "wire" it could have been for almost anything. Remember he is a "Sitting President" with all of the crazy security that goes with the job. It could have been something to do with that. You didn't see any overt signs of security while watching the debates on TV, but I'll bet you there was plenty you didn't see.

http://www.rockininquad.com

September 15, 1972 - 10:15pm. KQIV in Lake Oswego, Oregon, signed on the air at 106.7 FM. Owner, Walter J. M. Kraus, Entrepreneur, puffed on his over-sized, custom-rolled cigar and waited for the money to pour in. That never happened.

As this site develops (we started on September 18, 2004) we will tell the story of KQIV in words, pictures and sound. KQ4, as it was called, was to be the "new wave" in Portland radio that would shake the market, leaving all other radio stations behind. Progressive album rock and "Quadraphonic" sound were the tools that would shape this radio revolution. Well, that was the plan, anyway. Like many great ideas, KQ4 fell far short. We will look at KQ4's ownership, management, staff, music, promotion and more. And...have some fun doing it!

We'd love to have your input. Share your memories, send in any artwork you might have, dig out those old newspaper articles, MP3 any old airchecks and send them our way. We especially encourage input from KQ4 listeners. If you remember the station, let us know. Include "then and now" photos if you have them. We will post your thoughts anonymously if you desire.

We will be adding pages as we get the goodies. Check back on a regular basis!

October 25, 2004
By Eric Hellweg
CNN/Money contributing columnist

Boston - The satellite radio business has been cranking up the volume these past few weeks.

Sirius Satellite Radio struck first with its hiring of Howard Stern. That announcement pushed Sirius's stock up more than 15 percent. The stock has since settled back down a bit. Then last week the company's much larger rival, XM Satellite Radio, struck back: It announced that it would broadcast Major League Baseball games.

(snip) The Wall Street Journal reported that XM paid several times Sirius's offer for MLB rights. (Sirius earlier paid $220 million for rights to broadcast National Football League games.)

(snip) A funny anecdote leads us in: I went to the Patriots game a week ago (trying to distract myself from the Red Sox being down 3-0 to the Yankees at that point) with a friend who is a Sirius subscriber. During a break in the action, an advertisement for Sirius radio came over the loudspeakers, and my friend -- apropos of nothing more than perhaps the beer in his belly and the Pats doing well -- decided to stand up and scream "I have Sirius and I love it!" He was immediately approached not by security but by people who asked about the service and wondered if it was worth the $12.95 per month.

Why is this incident telling? Because despite being around for several years, satellite radio has only recently jumped into the public consciousness, mostly because of the Howard Stern announcement.

Love him or hate him, Stern is a radio powerhouse. In this relatively early stage in the satellite radio war, strong content plus promotion works. That can go a long way toward helping Sirius close the gap between its 700,000 subscribers and XM's 2.1 million.

Sirius is already seeing a strong boost as a result of the Stern announcement, but this will pale in comparison with the number of consumers who will sign up for Sirius once Stern leaves analog radio in December 2005.

Granted, Sirius is paying a lot to secure Stern, and when a company starts to justify a move by claiming that it needs to sway only 10 percent of Stern's listeners to pay for the deal, it's worrisome. That's fuzzy math.

But Sirius could make back Stern's salary if he brings in 200,000 additional subscribers each year. And with a marquee name like Stern's, the self-proclaimed "king of all media" just may make it work.

Looking at the video - not the stills on the link - I don't think it's a wire. There is a similar crease on his shirt on the right side of his tie, a little higher though, as he adjusts his tie and turns slightly away from the camera. Any radio aids, you'd be looking for a Telex reciever in his ear, not a wire on his chest. If I'm wrong and it is a wire, it's likely for a mic, recording any great moments of oratory history. Since it was Geo Dub, there was none.

Text of report by Caribbean Media Corporation (CMC) news agency
22 October 2004

New York

Cuba said it was prepared to use "every possible measure" to repel any form of aggression against the Communist state as it renewed its criticism of the United States over its decision to establish a radio and television station to broadcast material to the island.

Ambassador Rodeny Lopez told the International Frequency Registration Board (IFRB) of the International Telecommunication Union (ITU) on Thursday [21 October] that Washington was using a military plane to broadcast the material to Cuban citizens.

He said Radio and TV Marti underscored Washington's policy of tightening the four-decade old trade embargo against Cuba.

The point is you want to elect a cheater.

Thats not a very smart thing to do is it?

Broadcasting eight hours a day, six days a week, in a region where the illiteracy is high and the technology low, the station is many people's main news outlet. And as the only licensed radio station operated primarily by and for indigenous Mexicans, it's a unique source of two other commodities that some deem crucial to this community's long-term survival: regular contact with distant loved ones, and the freewheeling, improvisational music called son huasteco."

I haven't listened to them in quite some time (Do have them QSL'd though from back in 1987) but they are/were apparently still on the air at least as late as June according to:

Of course you can ... an AM station that probably can't make money.

Two recent big-city AM sales:
WBIX (Boston suburb) 40 kW day, 2.5 kW night, to an INDIVIDUAL for $7 million.
WPLC (Washington suburb) 1 kW day, 48 watts night, to Bonneville for $4 million. But an astute friend suspects that Bonneville could diplex it on their WTOP towers and get more day power and possibly "real" night

operation. And just think, with 450 kHz spacing everybody driving past a joint-site WTOP/WPLC would hear them no matter where their AM radio was tuned.

It still happens and has nothing to do with the fairness doctrine.

     Did you read the last two words -- public airwaves? Spectrum
was considered a limited resource and government permission was
required to use it. In return, conditions were imposed.

     There is no apparent shortage of newsprint for purchase.

> the printed media.

But that limatation has been relaxed. There have been many new licenses
issued since 1980, and there are many more 24 hour stations. Given the open
situation, I'm sure there many open radio frequencies in most markets. TV
channels haven't been saturated since the introduction of UHF in the early
50s.

Should the fairness doctrine apply in markets in which there are open
frequencies and channels?

Why not?  Despite their large bandwidth, satellites don't have an unlimited
number of frequencies.  The FCC currently has jurisdiction over wire
communications, but they generally have never enforced program content
there.  Isn't it unfair that  fairness, as defined by the government, isn't
enforced there as well?

>

But why do they listen?  Is it because they have single digit IQs?  If they
are really that stupid, is regulating their radio and TV programming all it
takes to make them smarter?

They still sell newspapers.  And the internet is a better newssource than
radio and TV ever was.  If radio and TV disappeared entirely as a news
source, people would still have no excuse for being uninformed.

> "hits of the 60s & 70s," "alternative," and the latest insanity, "old
> school, "  ad nauseum. Give me a break!  That is hardly diversity.

Sure it is.  It's just not the kind of diversity you want.  It isn't what I
want, either but I still have alot of good choices.

Stations go on sale from time to time.  They aren't cheap, but that's a reflection of the revenue they can bring in.  And the revenue reflects the number of listeners.

I can buy time right now on brokered stations.  There are several around here, and most of them have open air time.  There are probably similar situations in most markets.

Air America is buying time on at least one Clear Channel station.

The shortwave stations are a good bargain.  Time goes for around a dollar a minute, and most of the country gets covered.

Frank Dresser

HITS OF YESTERYEAR PLAYLIST FOR 10-31-04:

Needles And Pins-Searchers
Don't Hang Up-Orlons

Anna (Go To Him)-Arthur Alexander (rare stereo)
Words Of Love-Buddy Holly
Little Girl-Syndicate Of Sound
Mr. Bassman-Johnny Cymbol
Love Letters-Ketty Lester
Hey Little Girl-Dee Clark
Dry Your Eyes-Brenda & The Tabulations
My Heart's Desire-Wheels
Those Magic Changes-Sha Na Na (From movie "Grease")
Cool Jerk-Capitols
Lie To Me-Brook Benton
Sweet Thing-Spinners
Bless You-Tony Orlando
Sugar Town-Nancy Sinatra
Confidential-Sonny Knight
Pipeline-Chantays
My Guy-Mary Wells
What's Your Name-Don & Juan
Te Ta Te Ta Ta-Ernie K-Doe
I'll Make You Mine-Bobby Vee (can you tell I like this song)
Lover's Question-Clyde McPhatter
Shake A Hand-Faye Adams
Twist And Shout-Isley Brothers
Slow Down-Larry Williams
Didn't I Blow Your Mind-Delphonics
Snoopy For President-Royal Guardsmen
Stay Awhile-Dusty Springfield
I Knew From The Start-Moonglows
Love Is A Hurtin' Thing-Lou Rawls
Buzzzz-Jimmy Gordon
The Masquerade Is Over-Harptones
7 Rooms Of Gloom-Four Tops
House That Jack Built-Aretha Franklin
I Had Too Much To Dream-Electric Prunes

No.  Instead I'll listen to a bunch of bs spewed by people on a NG that keep changing their identity.  Without a doubt THEY are much more credible.

Now run off and join the rest of the flock.

Don

How did the fairness doctrine keep adgendas from spinning out of control?  I mentioned Chicago's Howard Miller show.  That show would frequently get as loud and obnoxious as Limbaugh or Hannity, back when the Fairness Doctrine was in full force.  I haven't seen their shows, but I understand Joe Pyne's and Wally George's shows were similiar.  The stations would run boring counter programming on other hours to keep the FCC happy.

It's my opinion that the current popular bombastic programming is just another radio copycat phenonema.  Success breeds imatators.

>
> As you must know, Frank, newspapers do not require a license to operate

> resource.

Let's imagine most newspapers were controlled by one sydicate.  Would we be better off if they were licensed?  Justifications could be manufactured. They use paper from trees grown on public land.  They are transported on public roads.  Would newspapers serve us better if we gave the government the right to change their ownership or shut them down?

```
>The fact is--the FCC violates the spirit and letter of the
> Act when it comes to its stewardship of licensed radio and tv stations.
>   And no one in Congress cares because of copious amounts of NAB money.
>
> In short, it all stinks.
>
> JMHO,
> John Figliozzi
```

And I still think these are reasonably good questions:

How would the new fairness doctrine keep the political partisans and kooks from harassing media stations with nusiance complaints?  Who would define what a nuisance complaint is?

Frank Dresser

Actually, the point is that you are engaging in rank speculation with
no proof, and assuming that it is so because you want it to be so.
That's not a very smart thing to do is it?

From: http://www.offshoreradio.co.uk/djsn2p.htm

John Peel Born 30th August 1939, in Heswell, Cheshire, he was educated at Shrewsbury public school and did his National Service in the Royal Artillery. He then worked at Townhead Mill in Shropshire before moving to America. His first job there was with the Dallas Cotton Exchange but his love of the blues led to him making a guest appearance on a local radio station. When the Beatles took off in America, an English accent, especially an almost Liverpudlian one, was much in demand. John became the resident Beatles expert on KLIF in Dallas. A full time job on KOMA in Oklahoma City followed, then KMEN in San Bernardino. An unsuccessful marriage prompted his return to the UK where a neighbour of his mother's put him in touch with Radio London. On the basis of his experience on American radio, John was immediately given a job and joined the station in March 1967. As always, the newest recruit had two air-shifts. John deputised for whichever DJ was on shore leave and presented the midnight-2am show. While working in America John had become very aware of the music of the "underground". It was the hippy era and dozens of new bands were emerging. John began to feature the best of this new music on his late night programme which came to be known as The Perfumed Garden. It immediately won a large and loyal following and was hugely influential. He stayed with Radio London until its close-down when he became part of the founding team of Radio One. (The Cats Caravan web-site did have a recording of the last ever Perfumed Garden but has either moved or closed down. Does anyone know which?) More than thirty years later John is still on Radio One, the only survivor since the start, and still playing new, challenging, music. He has also presented shows on the World Service for many years and hosts the weekly Home Truths magazine programme on BBC Radio Four. John was awarded an OBE in 1998. There is another photo of John in Dave Hawkins' photo album. Many club disc-jockeys release CDs of their mixes but now the DJ with the most idiosyncratic taste of all has joined them. A recording of John spinning the discs at Fabric was released on 2nd December 2002. As you would expect, it is a varied selection, including Motown (The Velvelettes), doo-wop (The Capris), indie (Joy Division), reggae, funk, rock, the Kop Choir singing You'll Never Walk Alone - the anthem of John's beloved Liverpool FC - and his all-time favourite: Teenage Kicks by The Undertones. Details and audio clips can be found at www.fabriclondon.com or it can be ordered through Amazon. The Radio Academy,

a trade body for people who work in the industry, has recently launched its own Hall of Fame honouring those who have made an outstanding contribution to UK radio. John Peel was inducted into this august group in December 2003. You can find details here
http://www.radioacademy.org/halloffame/peel_j/index.html.

26th October 2004: We have just heard the sad news of John's death. The BBC has reported that he died of a heart-attack while on a working holiday with his wife in Peru. The Pirate Radio Hall Of Fame will be paying its own tribute to him as soon as possible but, in the meantime, you can read more about one of the great broadcasters of the last forty years on the BBC, NME and Guardian web sites. You can also pay your own respects here.

Click on site for audio clips:
 John Peel in The Perfumed Garden on Radio London on 18th July 1967. Tape courtesy of Ray Andrews (duration 3 minutes 6 seconds)
 John Peel ending the last ever Perfumed Garden on Radio London on 14th August 1967. The programme had continued through the night on this one occasion and John was about to hand over to Chuck Blair with the final Breakfast Show. Recording kindly provided by Albie Somerset (duration 3 minutes 55 seconds)

And you would be wrong.  Further, with the coordination/transition to DTV, there's
no
space anywhere, in any market.  And besides, twice a finite number is still a
finite
number.

> Should the fairness doctrine apply in markets in which there are open
> frequencies and channels?

No, because a licensee should do their part to represent all divergent views.

>> : Should this new fairness doctrine cover internet radio, satellite radio,
>> : satellite TV, and cable TV?
```

>> no

> Why not?  Despite their large bandwidth, satellites don't have an unlimited

> communications, but they generally have never enforced program content
> there.  Isn't it unfair that  fairness, as defined by the government, isn't
> enforced there as well?

Satellite spectrum is, by definition, not broadcast spectrum....it's just a band that some operators choose to operate un-encrypted.  And subscription satellite is another animal altogether, like cable.

> The shortwave stations are a good bargain.  Time goes for around a dollar a
> minute, and most of the country gets covered.

Covering the country is not the same as getting gross impressions.  The reason why shortwave is a dollar a pop is because the cost on a cpm (cost-per-1000) basis is, still, probably higher than the most expensive station in the most expensive market.

> the right to change their ownership or shut them down?

This is a straw man.  Newspapers aren't controlled by one syndicate.  Have never
been
(although USA Today comes close, if they had no other local competition) and
probably
never will.  So your argument breaks down around your presumption.

> And I still think these are reasonably good questions:

> How would the new fairness doctrine keep the political partisans and kooks
> from harassing media stations with nusiance complaints?  Who would define
> what a nuisance complaint is?

"Responsible" spokespersons were, in the past, either sober citizens (and some
maybe
not so sober) and representatives of community organisations, when I worked in
radio.
The management would, in the interests of diversity, bring in the occasional
citizen

who would espouse a view quite contrary to the company's.  In any event, management
was capable of keeping the occasional raving lunatic off the air...unless the raving
lunatic succeeded in being entertaining enough that management would let him on, if
only to embarrass him.

And public files are thick with nuisance complaints.  Why would you think that a
broadcaster should be immune to them?  No need to restrict.  Bring 'em on.

OK, how about one paper towns?  Would it be a good idea  for the government
to ensure that the opponents of the editorial policy of the paper in a one
paper town got their own space in that paper?

Politics in the US seems to be going through an unusually nasty period lately.  I have no doubt the Republicans and the Democrats would be actively searching out or creating local pressure groups, in order to push media stations around.  Maybe I'm wrong about that and my opinion of the likely politicization of the fairness doctrine just reflects the lower regard that I've developed for both parties over the last 20 years.  But I honestly think any attempt to revive the fairness doctrine is going to turn into a real can of snakes.  Better to leave bad enough alone.

The "Radio Crazy", it's baaaaaaaakkkk!!!! Hi!

For sale:

Partial interest in 1 KW AM daytimer (non-directional)in small Alabama community. No real estate is included.

Total asking price is only $75,000 with $10,000 down. Seller financing.

I am NOT a broker, shill, agent, owner or part owner.

This is a joint venture and there may be an element of risk. You could lose all or part of your investment. You heard it first here, kiddies!!

Active or inactive investors with at least $5,000 each are welcome. All investors would be on the board with full voting rights if desired.

Tel: (478)741-1710 in Macon, Georgia.

References:

a-My parole officer. Mr. Larson E. Rapp. c/o Zing Zing prison, Ossingstink, NY 12345. Tel: 1-800-IMA-THUG.

b-Trade reference: Brazilian Bandit Airways, Oshkosh Airport, Oshkosh, WI. (US hdqtrs). Purchased a one-way ticket to Rio using all small unmarked bills. Don't worry, I will not leave until all the investors funds are in my Swiss bank account. I am NOT a crook!

73,

Meyer Gottesman, W6GIV
aka The "Radio Crazy"
aka Moron Gottesman
aka Maven Gottesman

Here in Chicago, we just had an AM xband station go on the air a year ago.
Other frequencies sound open.  One street gang related pirate station was
operating on an open FM frequency here.  We also have a couple of reletively
new low power UHF stations.

>

I'm not sure I understand.  Are you saying the fairnss doctrine should not
apply in those markets?

Right.  And viewers/listeners don't really make the distinction between cable and satellite and broadcasting anymore.  If 90% of a person's TV channels are uneffected by the fairness doctrine, does the fairness doctrine have any effect on the viewer?

If the fairness doctrine is really a good idea, shouldn't it effect every station a consumer gets?

Just why is the fairness doctrine a good idea?

It's hard to say exactly how many people listen.  But, as far as the rate goes, it used to be alot higher back about 20 years ago when stations such as WRNO and WINB were selling time.  Since then, there must have been at least fifteen SW brokered transmitters going on the air.  It's a buyers market now.

Why are these conditions a good idea?

If these conditions are a good idea, why aren't they a good idea for all the sources of a person's information?

>
> There is no apparent shortage of newsprint for purchase.

Oh.  Is that the only reason we don't have a fairness doctrine for the newspapers?

For internet radio listeners ...

http://www.radioshowlinks.com/
A Directory of Internet Radio Shows and Stations; Listen Live or On-Demand. The directory includes Schedules and Stream links for Talk Radio, Current Events, Business, the Arts, and other programming.

Many top talk radio shows can be found on the Popular Internet Radio Show channel including Rush Limbaugh, Dr. Laura Schlessinger, Bill

O'Reilly, Sean Hannity, Al Franken, and others:
http://www.radioshowlinks.com/display.aspx?id=72471

Another channel includes many popular NPR and other Public Radio shows
including streams directly from National Public Radio as well as
webcasting internet radio stations from the NPR network. For example,
this channel has top National Public Radio shows:
http://www.radioshowlinks.com/display.aspx?id=72783

We also serve our schedules on RSS feeds. For example, this is the RSS
feed of "Popular Shows Live Now" ...
http://www.radioshowlinks.com/rss.aspx?id=11

There are many more. It's all free; no registration required. It also
works on Pocket PCs such as IPAQ and streaming capable cell phones such
as the Nokia 3650 as well as a SmartPhone. Please check it out and let
us know what you think about it and any suggestions you may have for
shows, or stations, that we should add to our Internet Radio guide.

> OK, how about one paper towns?  Would it be a good idea  for the government
> to ensure that the opponents of the editorial policy of the paper in a one
> paper town got their own space in that paper?

You keep missing one point.  Even in one-paper towns, the acquisition of this paper is still attached to the exchange of merchandise for consideration (the paper's sale price).  And in this instance, it doesn't take a contrary view to use a newspaper to spread the word (and the paper may actually help in publishing a letter to the paper's editors) since all it takes is for the dissenter to hire a printer to publish that view to be distributed independent of the paper.  This model is not possible in a broadcasting model.

>> > And I still think these are reasonably good questions:

Maybe so, but it's clear you don't understand broadcast policy and spectrum management.

Politics has gotten this way BECAUSE the FCC has left "bad enough alone".  There's a psychological effect that comes from people who associate only with others holding similar views, where after a time everyone involved comes away with an even more emphatically-held view of those issues.  It's called group polarisation.  If you want politics to climb down from this precipice, then you should support the reintroduction of the Fairness Doctrine.  And run the likes of FOX News out of Dodge, or fine them out of existence.  It's their transgressions which have made a bad situation worse.

> new low power UHF stations.

"Sound" open and being open are two different things.  I've had this didact
before,
but the gist of it is that the channels that "sound" open are only to allow that
channel to be allocated in other areas, which in the Class C area that Chicago is
in
may be far, far away.  Putting an allocation on this "open" channel would result
in
interference to these far-flung operations, thus reducing their coverage area to
less
than what they're allocated to serve.  Same goes for the pirate.  If you look at a
frequency search map, using the specified minimum distances to each conflicting
allocation, you'll find that there is some apparent "white" areas as a result of
the
overlaps (or actually, the effort to make sure they don't overlap).

>> > Should the fairness doctrine apply in markets in which there are open
>> > frequencies and channels?

>> No, because a licensee should do their part to represent all divergent
> views.
```

> I'm not sure I understand.  Are you saying the fairnss doctrine should not
> apply in those markets?

I am not.  Open channels (assuming that there are any, which certainly isn't the case in Chicago) mean that there are only a few possible voices that might offer diversity.  But there's still a finite limit to how many voices there will be.  This is different from printed matter or public oratory, where there is no self-limiting property in the exersize of one's free speech rights.  With broadcasting, the existence of one station prevents the free speech rights of those other "potential" operations on the same channel, thus depriving these "others" of their free speech rights.  Since the "others" don't have the opportunity, then neither should the operator of the facility which abridges the "others" of theirs.

>> Satellite spectrum is, by definition, not broadcast spectrum....it's just
>>a band that some operators choose to operate un-encrypted.
>> And subscription satellite is another animal altogether, like cable.

> cable and satellite and broadcasting anymore.  If 90% of a person's TV
> channels are uneffected by the fairness doctrine, does the fairness doctrine
> have any effect on the viewer?

Doesn't matter.  People pay for subscription services.  They get what they pay for, and if they don't like what they're hearing, they can cancel.  Broadcasting is different.  You can get conventional radio using devices which are readily available, require no real skills to install or use, and cost at least an order of magnitude less to acquire.  For those who have satellite receivers, after having made the effort, if they think it's the same, then it is for them.  But that doesn't make it so.

> If the fairness doctrine is really a good idea, shouldn't it effect every
> station a consumer gets?

As above.  Broadcasting is different.  The spectrum occupied is granted, in trust, by the people of the United States.  Broadcasters should be held accountable for serving all those people.  Whether they like it or not.

> Just why is the fairness doctrine a good idea?

Because we've seen what happens when it's not in place.

> Covering the country is not the same as getting gross impressions.
> It's hard to say exactly how many people listen.  But, as far as the rate

> market now.

Well, then, that's not exactly what I'd call a good investment, is it?  Tell you
what....pay me $500 to spread to the world what you have to say.  I promise I'll
tell
at least 15 people a day about your message for a month.  But I won't tell you how
many people I'll tell, and those that I'll tell may have no means by which to
acquire
the service or goods you're selling, at that.  Deal?

I vote for a Satellite radio newsgroup too! Mine is getting installed as
I post!

It's commonly not understood by non-engineers that a radio station (broadcasting or otherwise) causes interference over a much wider area than it provides service.  This is especially true on AM where multiple signals on the same frequency mix together.

The new Chicago X-band station moved from downstate - Johnson City IIRC. A station on that frequency in Chicago would not have been allowed if WRLL had been operating downstate.

As for the seemingly-open FM frequency, that depends on the quality of one's receiver. I can ensure you my car radio (1998 Ford Escort) finds NO open FM channels anywhere along the Edens/Kennedy/Ryan/Skyway corridor. (and I'd be amazed if it found one open anywhere else in the Chicago city limits) The frequencies either side of WUSN (99.3, 99.7) *sound* open but that's because WUSN is running IBOC!

On the other hand, one could take that to extremes... my home receiver provides useful reception of several Memphis stations, 170 miles away. Should we prohibit any Nashville station from operating on a Memphis frequency?

The new LPTVs have (probably, I don't know the specific channels) become possible as a result of the FCC relaxing certain "taboo channel" regulations. They acknowledge a major improvement in the selectivity of UHF TV tuners since 1952. Many FM receivers haven't improved significantly in selectivity since the 1950s.

> have any effect on the viewer?

Y'know, this is a dilemna in light of the Commission's new decency push.

How does OTA broadcasting compete with TBS, HBO, XM, or Sirius? When the former industry is restricted by decency rules, while the latter isn't?

How does enforcing decency rules against OTA stations accomplish anything when most homes have content-unregulated premium channels? When a growing number of cars have content-unregulated XM receivers? So little Johnny doesn't learn what a breast looks like from Janet Jackson on CBS. He'll figure it out the next night when he tunes past Showtime during a program that shows a whole lot more than Jackson did...

Cable TV channels use radio transmission (via satellite) to link their programming to your local cable system. XM and Sirius use radio transmission (again via satellite, and now also terrestrially) to deliver their programs to your radio.

IMHO the FCC has grounds to regulate both services on content if they chose to do so. IMHO they need to either do so, or lift content regulations on OTA.

Yeah, but isn't that largely a matter of definition and policy?  As I
understand, the FCC used to try to keep a 30 kHz spacing between stations in
the same market, now they'll go for 20 kHz.  In my opinion, there are
already too damn many stations on the air, using my personal standard of
maximum allowable interference.  But if the FCC doesn't much care about more
interference, they could pack more stations in.

Even if a broadcaster refuses to broadcast an opposing view on his station
or stations, he is only restricting one outlet for the opposing speech.  So
what?  The Soviet Union had an entirely controlled media.  Every paper,
every broadcaster was owned by one monopoly.  Yet some version of the truth
got around.  Printed material from typewriters and photocopiers were handed
around.  Phone calls were made.  The Soviet media lies increased cynicism,
not indoctrination.  Control of one station or one broadcast network would
be even less persuasive, especially if other outlets for opposing viewpoints
are available.

doesn't make it
> so.

If people don't like what they hear on a broadcast, getting rid if it is even easier than canceling.  They just tune out.

I'm not sure I catch the reason why the fairness doctrine is necessary with broadcast stations but not necessary with pay services.  I don't think it has to be a jurisdictional thing, as some Congressmen have proposed extending decency standards to pay services and the internet.

Anyway, I can't think of any reason a satellite direct broadcast service must be a subscription service.  If satellite technology gets cheap enough, the networks might well launch their own, advertiser supported satellites. It's also easy enough to imagine the satellite receivers would be easily affordable.

With cable systems, there's no practical distinction between cable channels and broadcast channels.

> the people of the United States.  Broadcasters should be held accountable for serving
> all those people.  Whether they like it or not.

They do serve people, by entertaining them.  That's what broadcasting is good at.  Broadcasting is a poor educational media.  People who want to actually learn something read about it.  Or converse with someone knowledgeable.  Or, best yet, do it.  I suppose broadcasting could be whipped into a decent educational media with VCRs and tape recorders so people could go back and forth until they actually understand what's being discussed, but they hardly ever do.  Broadcast information goes into the air for an ephemeral moment, and then it's gone.  Guys like Limbaugh and Hannity are successful, not because they are informative, but because they're entertaining.

I suppose there are a few doofuses who think they are getting some sort of political education from the broadcast loudmouths who are putting on a show within the limitations of broadcast media.

>

I do live in a dense urban area, so some of the interference I'm getting may be from various household appliances. It's very intermittent.

And all the power lines in my immediate neighborhood are above ground, including a power pole and lines about 30 feet from my back door.

But I'll stop worrying about BPL.

Thanks,
cworonow@ix.netcom.com

A landbased pirate radio ( Radio Dor ) station was raided today, and it's equipment confiscated. But for the first time, since the new pirate radio law came into force, the police recorded all the companies that advertised with the station before the raid took place.

A NIS2,000,000 ( $450,000 ) fine or a one year prison sentence can be handed down if found guilty.

(Mike Brand)

According to this week's Media Network newsletter, a special tribute to John Peel will be broadcast on Friday 29 October on the BBC World Service, in the time slots normally occupied by John's programme which are, in the case of Europe 08:32, 12:32 and 18:32 UTC Friday and 00:32 Saturday, though not on FM or LW in the UK.

To mark Manx Radio's 40th birthday, a new book - "A Nation's Station" is soon to be published.

Manx Radio's been on quite a journey during four decades of broadcasting.

Its highly unusual position - as a public service broadcaster, which is also partly commercial, means the station's always been subject to intense scrutiny.

Author Derek Winterbottom says the book sheds light on Manx Radio's ups and downs .. and examines its fascinating, unique status.

Hear Audio File at http://www.manxradio.com/.

What did David Dreier do to John & Ken?   It sounds like some legal
process to take away Clear Channel's license, but J&K won't say.

He wants them to lay off disparaging him before the election, no doubt.

There must be some rumor to clarify it out there?

Every week the RSGB produces a News Bulletin for Radio Amateurs and Short Wave listeners. They are read live on Sundays (usually) by a team of readers throughout the UK on HF, VHF and above. The text is available on the RSGB Site http://www.rsgb.org/ .

This service in Real Audio allows you to hear the news at any time and even to download the files for future use. Many countries including the US, Canada, South Africa, Australia and New Zealand as well as Europe and the UK take part or whole bulletins for retransmission on their own services.

For the last 3 years I have been reading these bulletins in Real Audio which has made them more widely heard than before. There have even been extracts on HCJB from Ecuador! Feel free to re-broadcast outside the UK, but as a courtesy please email to let us know at g4njh2@ntlworld.com

Bulletins had also been re-broadcast by UK Internet Gateway Operators over radio links but the RA have withdrawn permission (July2002) to review the licensing implications of this.

Not possible in broadcasting?  There's no brokered stations anywhere?

Anyway, since there's more than one media to fight a disagreeable newspaper,
an opponent might use a different media.  Buy time on a radio or TV station.
Start a letter writing campaign.  Annoy people over the phone.  Put up some
billboards.

>
> >> > And I still think these are reasonably good questions:

Actually, I think US politics is reverting to it's normal nastiness.  The
post WW2 political era was unusally calm, but that started falling apart in
the sixties, and it took a big hit in the Watergate era.  The trend has
solidified in the last 20 years.  We still may decline further.  We haven't
had a fistfight in Congress for a while.

>There's a

Ah, is that who the fairness doctrine is supposed to serve? People who associate only with others holding similiar views? Well, I was sure you didn't need the fairness doctrine in order to think straight, and I'm pretty sure I don't, either. I'm glad I have that question answered.

But aren't these just the sort of people who would follow their favorite propaganda outlets to cable or satellite radio when the fairness doctrine is reintroduced?

If the fairness doctrine serves American society, shouldn't it cover all media outlets?

>And run the likes of FOX News out of Dodge,
> or fine them out of existence. It's their transgressions which have made
a bad

I suppose FOX could herd their news operation from Dodge to cable. Their fans would follow them, and FOX news would do just fine.

Isn't Fox News only on cable anyway?

Supposedly, the "Political Human Sacrifice" that J&K were doing is
to be considered illegal campaign material....J&K went on and on about
it during their show this evening.

If there are any radcio listeners here in Kalamazoo listening.

Can someone tell me what the deal is with WNWN 98.5 broadcasting on 95.5 as well as it's regular frequency? I discovered this while searching the FM band this morning. I thought at first that it was the radio that I was using but when I turned on my large stereo system and punched in the duplicate frequency I found the same station on the big radio as well.

So what's the deal? Is it my radios or are they going to put a new station in the 95.5 spot?

TIA
Robert

Search around and find out if your local power company has any tests or has
expressed any interest in BPL.

Slowly and slowly international broadcasting to major nations are dying out. I think the focus will be on third world countries these days. As now people in 1st world nations are expected to be listening to XM, Sirrus, or using internet feeds.

But even if an internet feed is available.. I still use shortwave :-)

Analysis by Andy Sennitt, 21 October 2004

The US Federal Communications Commission (FCC) has given the thumbs up to the development of Broadband over Power Lines (BPL) technology, which at first glance looks like bad news for existing users of shortwave such as international broadcasters and radio amateurs. But based on what US computer industry analysts are saying, it looks as if BPL might not be as big a deal as first thought.

I have to ask, but if the show has Viet vets that were in the Hanoi Hilton
talking about what happened after Kerry's testimony, and then Kerry
testifying... how can that be irresponsible?  Biased? Yep.

However, if ABC and the rest of the "established" media decided to dig up
someone to do the same thing about Bush's Air National Guard training, would
you feel that is out of line?  I suspect not.

After the nice ABC memo indicating that the on-air crew should harp on Bush
errors, and promote Kerry, I can't see how you can consider them unbiased.

Coining new meanings from older words happens all the time. Consider "Mace",
originally meaning a club (weapon), used as a trademark for a chemical that
repels attackers, and in danger of becoming a generic word.

Presumably BPL is only going to be a last-mile sort of thing.  So you will
not have to worry about the high voltage lines so much as the local lines in
your neighborhood.

The noise will be broadband, and will be pretty much everywhere.

>Would satellite or digital radio be better to avoid the interference?

My personal feeling is that BPL will not be cost-effective anywhere and
that attempts to put it into place will not be very successful, so there
probably won't be too much to worry about.  If you are outside of a
dense urban area, it probably won't be an issue in any case.

Nobody really knows.  But in this age where a huge number of appliances
don't even come close to meeting Part 15 requirements, I think it's a wonder
that HF is as clean as it is.

> That would be a neat trick, seeing as how one cannot coin a word that already
> exists.  The term "broadcast" came from agriculture.

Okay...so let's see how this relates....

There's a place in Greece called Marathon.  It's been there for a long time, but
before the battle of Marathon, and before Phidippides ran to Athens from there,
Marathon was always a place, not a race.  That's coinage.

Spam was (and still is) a once-ubiquitous canned meat, that some people found
appeared in many undesirable places and after a time, despised.  It's a word
that's
been around for some 75 years.  Now it's the email glut that, after a time, most
of
us despise.  That's coinage.

Gay used to mean happy.  Glad.  Merry. Cheery.  Sunny.  Bright.  Still does, for
that
matter.  Now it also means someone who is sexually attracted to someone of the
same
sex.  That's coinage.

So (or sew).  Broadcast, when used in the context of an agricultural effort, means
to
spread seed over a wide area.  Seeing as radio has nothing to do with farming,
when
Frank Conrad (I've since found a reference for this...and of course, Conrad was
one
of the main protagonists in KDKA's beginnings, but never its general manager)
appropriated a word which is suggestive of how radio waves propagate, and how he
intended to use that property, he coined the term in the context most understood
today.  If you consult http://dictionary.reference.com/search?q=broadcast, you'll
see
that agricultural sense, the transitive form, as in spreading seed, is considered
the
word's fourth sense.  But Conrad's word also took on an intransitive verb form,
requiring no object at all, and a noun form.  Neither of these has an analogous
sense
in agriculture.  That's coinage.

Hi all,

I've listened to some of the OTR, and I remember there was this one
scary show that to hear the story you had to visit the guy "On the
other side of the graveyard".

Does anyone remember what this show was called?

Thanks,

Chris

:
: The fairness doctrine is interference.  It was used as a political club.
: Richard Nixon and the Republican party were using the so-called fairness
: doctrine to go after the licenses of radio and TV properties of networks
and
: newspapers they didn't like.  But Nixon didn't invent the tactic.  It was
: first used in the Kennedy administration.  Given today's political
: climate,I'm sure both parties would enthusiastically hammer the media
: companies whenever embarrassing stories got out.
:
: Is that really what you want?
:
: There's a mistaken belief that dropping the fairness doctrine made right
: wing political talk radio possible.  That's not true.  In Chicago, Howard
: Miller had a greatly entertaining political talk show back in the early
: seventies.  Miller was to the right of Limbaugh, Hannity and Atilla the
Hun.
:
: Let's also consider who else gets treated shabbily by the fairness
doctrine.
: Who should determine what the audience should hear -- the government or
the
: audience?

1. The Fairness Doctrine could be resurrected and rewritten to assure a
balance of voices/opinions are heard on the public airwaves.
2. The audience has absolutely no input over what is heard on the airwaves
(with very limited exceptions). If you try to argue that broadcasters are

responding to market demands then the I.Q. factor in this country has indeed fallen to the low double or even single digit range.
3. No, what I would really like to see is an ownership cap of seven to a dozen stations per entity with no cross ownership. Then there might actually be some creative programming and diversity - you know, like there was for the first 75 years or so.... Imagine! stations with different studios, different personnel, maybe even different program directors! Then they wouldn't sell for over inflated amounts and we wouldn't get stripped down, dumbed down voice-tracked generic dog-vomit programming!
4. Radio listenership is down by 15-20%. There's a reason for that

Maybe so, but your statement...

> 2) There was no Fairness Doctrine until 1969.

...is quite incorrect.  Quoting
http://www.museum.tv/archives/etv/F/htmlF/fairnessdoct/fairnessdoct.htm:  The FCC fairness policy was given great credence by the 1969 U.S. Supreme Court case of / Red Lion Broadcasting Co., Inc/. v. FCC. In that case, a station in Pennsylvania, licensed by Red Lion Co., had aired a "Christian Crusade" program wherein an author, Fred J. Cook, was attacked. When Cook requested time to reply in keeping with the fairness doctrine, the station refused. Upon appeal to the FCC, the Commission declared that there was personal attack and the station had failed to meet its obligation. The station appealed and the case wended its way through the courts and eventually to the Supreme Court. The court ruled for the FCC, giving sanction to the fairness doctrine.

Point being that the Fairness Doctrine had been in place for quite some time...at least long enough that the challenge to it (which, as the article notes, failed) culminated in 1969.  Another article (http://www.twf.org/News/Y1997/Fairness.html) asserts that the policy was in place in 1947 (and enforced since 1949) when the "Mayflower Doctrine", which prohibited all editorialising by broadcasters, was abandoned.

> Want to try that again?

Indeed.

Amateur Radio Newsline™ Report 1419   October 22, 2004

Amateur Radio Newsline report number 1419 with a release date of Friday, October 22, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T.  A ham down-under finds a way to evaluate the effect of B-P-L on your station while hams in California keep a hospital in contact with the outside world.  Find out the details on Amateur Radio Newsline report number 1419 coming your way right now.

(Billboard Cart Here)

**

## THE BPL FIGHT:  AUSTRALIAN HAM DEVELOPS ON-LINE BPL IMPACT EVALUATION TOOL

A new tool to help hams evaluate the impact of Broadband over Powerline has just been made available on the Internet by an Australian radio amateur.  Its based on the work of a European consortium that's trying to set a world standard for B-P-L radiation
limits.  Owen Duffy, VK1OD, is the ham who made it happen:

--

Current BPL technology works by conduction of signals in the radio frequency spectrum up to about 100 MHz.  Existing power lines networks are  not ideal RF transmission networks, they will radiate radio frequency  energy causing interference to radio communications services, and they  will be susceptible to interference from nearby transmitters -- radio or  otherwise.

The European Committee for Electrotechnical Standardization, CENELEC,  are developing a standard for "Electromagnetic emissions from access  powerline communications networks". Access powerline communications  networks are commonly termed Broadband over Power Lines or B-P-L.

The proposed CENELEC standard does not automatically apply globally, though countries like Australia draw heavily on international standards,  such as CENELEC's for their own jurisdiction.

This proposed standard would set limits for the conducted energy and radiated energy of B-P-L systems. The radiation limit is specified for example as a field strength in dBuA/m in a measurement bandwidth at a specified distance on particular frequency, and its impact will not be immediately apparent to most radio users.

Do you know what the impact of +4dBuA/m in 9KHz at 3m is on your receiver?

The B-P-L Interference Evaluation Tool allows evaluation of the impact of B-P-L interference under the proposed CENELEC standard given a set of location / application specific parameters.

Go to the BPL Interference Evaluation Tool at www.vk1od.net/bpl and enter the details for your site and discover the impact. The URL again is www.vk1od.net/bpl .

--

Again, the VK1OD B-P-L Interference Evaluation Tool is on the web at www.vk1od.net/bpl. (WIA News)

**

THE BPL FIGHT: FCC RULE CHANGES TO PROMOTE BROADBAND

Back here in the United States, very little attention appears to have been paid to two other FCC actions amid last weeks FCC decision on BPL. But both are designed to help promote different forms of broadband Internet access. This is important because they will be giving Broadband Over Powerline a run for the corporate dollar profit. Amateur Radio Newsline's Bruce Tennant, K6PZW, has more:

--

In another vote taken at their October 14th meeting, the FCC loosened restrictions on fiber-optic networks built by local phone companies, encouraging them to make greater investments in so-called "fiber-to-the-curb" and "fiber-to-the-home" networks. According to the Commission, and as reported in a bulletin from C-Q, the ruling will encourage deployment of fiber optic broadband networks capable of delivering advanced data, video and voice service" by local telephone companies.

Prompted by the decision, several big telephone companies said they would move more rapidly to build fiber networks to homes. S-B-C says it now plans to provide 18 million households higher speed Internet services in two to three years, rather than five years as previously announced. . So far, Verizon Communications has been the most active in building residential fiber networks.

And there is more. The day after the BPL vote was taken, the FCC's Wireless Telecommunications Bureau announced a joint effort with the U.S. Department of Agriculture's Rural Utilities Service. This, to advance the deployment of broadband wireless telecommunications across rural America.

Its called the "Rural Wireless Community VISION Program. Its purpose is to bring experts from both agencies into rural communities selected as models to help provide technical, financial and other assistance in launching wireless broadband services in those areas.

All of this adds up to a lot of competition for B-P-L from the day it gets going.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

As we go to air, it is unclear whether either of these actions are efforts to promote multiple types of broadband, or, possibly a no confidence vote in the long-term potential of B-P-L.

More information on the program is available online at http://wireless.fcc.gov/outreach/ruralvision/index.html. (CQ)

**

RESTRUTURING: NEW UK INTERNET LINKING RULES

Across the Atlantic, some new procedures have been announced by United Kingdom radio regulator Ofcom. This, for the issuing Internet-linking Notices of Variation for U-K hams. Jeramy Boot, G4NJH, is in Nottingham with more.

--

Following a period of consultation, the following new procedures have been agreed between Ofcom and the RSGB. All current Internet linking NoVs will expire on 31st December 2004. Existing NoV-holders and new applicants will be able to apply for new NoVs from 1st October. The three-month period between 1st October and 31st December will allow for the continuity of the present
network to be maintained.

If you currently hold an Internet linking NoV and you wish to continue providing an Internet gateway beyond 31st December now is the time to apply for your new NoV. If you do not apply for a new NoV, the service you currently provide to the amateur radio community must cease on 31st December.

The method of application is totally web-based, and further details and a series of 'FAQs' can also be found on the RSGB website.

Jeramy Boot, G4NJH

--

Here in the U-S-A we take Voice over I P interconnects for granted. In most other nations hams are required to get special permission to connect their stations to the Internet. (GB2RS)

**

Break 1

Its time for you to identify four station. Linda Reader, N7HVF, if you please:

"From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world, including the W7FP repeater serving Salt Lake City, Utah."

(5 sec pause here)

**

RESCUE RADIO:  HAMS SUB FOR PHONES IN SOCAL HOSPITAL OUTAGE

Its ham radio to the rescue once again.  This, when a construction accident takes out telephones, faxes, Internet and all other outside wireline communications at a southern California hospital.  Amateur Radio Newsline's Joe Moell K0OV has the details.

--

Imagine that you're a nurse in the Intensive Care Unit of a hospital.  You need to contact a doctor at his home or office, but you can't get an outside line on the phone at your nurses' station. That's what happened on October 6 at Tustin Hospital Medical Center in southern California.  At a construction site next to the hospital, earthmoving equipment dug up 50 feet of telephone trunk lines, severing a 400-pair cable and damaging a 200-pair cable.

Following its previously-drilled procedures, the hospital's Director of Safety contacted the Hospital Disaster Support Communications System -- HDSCS -- an ARES group dedicated to the support of medical facilities in Orange County.  In 30 minutes, the first ham had gotten through rush-hour traffic and arrived at the hospital to set up a communications link to the outside.

As more hams arrived, they deployed to the emergency Command Post, switchboard, Medical/Surgical unit, Pediatric unit, Intensive Care Unit, and the new Emergency Department.  Meanwhile, the group's leader, April Moell WA6OPS, and two other base station operators prepared to make and receive phone calls in behalf of the THMC. Message traffic began to flow immediately after the operators got on station, as hospital staff members re-established links with their patients' physicians on the outside.

--

WA6OPS:  "Go ahead, W6KOS."

"Please advise ICU, I got the service, it was a message machine.  I put a message on that machine to call the number that you gave.  I also gave it my number.  If there's any other way they want us to try to get hold of him, we'll do it.  Please advise them that we have called."

W6KOS: "Will do, W6KOS."

--

When phone company workers stated that repairs would take at least six hours, HDSCS began calling more members to provide relief to the first responders. By 9:30 AM the next morning, when the last telephone pair was spliced and the outage was declared to be over, four shifts of HDSCS operators had worked within the facility. Twenty-four hams participated in all.

This was the 85th time that HDSCS has activated to provide support when telephones failed or overloaded at hospitals, for reasons ranging from equipment failure, to cut cables, to natural disasters such as earthquakes, floods, and wildfires. It was the fifth activation so far in 2004. Each of the 80 members has his or her own Go-Kit, ready to take to any of the 34 supported hospitals to establish communications.

For more information on HDSCS -- and how hams in your community can organize to provide rapid response like this to hospitals -- point your Web browser to www.hdscs.org. Those are the initials for Hospital Disaster Support Communications System, followed by dot-org. From southern California, this is Joe Moell K-zero-Oscar-Victor, for Amateur Radio Newsline.

--

Among the hams responding to this emergency were Newsline's 2003 Young Ham of the Year Jay Thompson W6JAY and his father Richard, WA6NOL. They, and all of the others who volunteered are another good example of Amateur Radio ready and able to step in when commercial lines of communications fail. (K0OV, ARNewsline™)

RESCUE RADIO: STUDY SAYS THAT CELL PHONES IN HOSPITALS MAY PRESENT RELATIVELY FEW RFI HAZARDS

Cellular telephones may not pose the big risk in hospitals that was once thought. At least according to Dr. John Halamka who is the chief medical information officer for the Harvard Medical School.

According to Dr. Halamka, three years ago the school held a conference on the subject of hospital versus cellular telephone RFI issue. Attending were some 100 engineers, the Food and Drug Administration, wireless providers and businesses.

At that meeting the group determined that cell phones only pose a threat if they are within three feet of medical equipment. So, says Dr. Halamka, the current widespread hospital restrictions on cell phone use are probably greatly overblown except at locations where phones may audibly disturb patients or staff.

So will this report ease restrictions against cellular phone use in hospitals? Probably not because no study can cover all eventualities and most hospital administrators feel it better to safe than sorry.

The full story is on-line at
http://www.usatoday.com/tech/wireless/phones/2004-09-27-hospital-phone-use_x.htm (CGC)

## COORDINATION: SERA RESCINDS MANDATORY TONE POLICY

According to the Repeater Users Internet remailer, the South Eastern Repeater Association has rescinded a controversial mandatory tone access policy enacted last summer. One that would have required tone receive and transmit on all new FM voice repeaters now, and on existing repeaters by July of 2006. Postings to the remailer say that numerous complaints lead the SERA Board of Directors to repeal the policy at a meeting on October 4th. (Repeater Owners / Users Remaler)

**

## ENFORCEMENT: FLAT SCREEN TV FOOLS RESCUE SATELLITE

An Oregon resident has been told he could face a $10,000 fine if he continues to use a new flat screen television set that is radiating a high power spur on the International Distress Channel of 121.5 MHz. This, after an October 2nd visit by a contingent of local police, civil air patrol and search and rescue personnel.

Chris van Rossmann of Corvallis owns the year old Toshiba flat screen T-V. Unknown to him, the set was radiating a signal that was strong enough to be heard by the orbiting Sarsat Cospas search and rescue satellite. From there it was relayed the Air Force Rescue Center at Langley Air Base in Virginia which activated a search.

Van Rossmann found out about his broken television set when the search team knocked on his door. They were expecting to find a malfunctioning portable emergency transponder like those carried on boats and in light plans. Instead their T-hunting gear lead them to the college students T-V.

This is not the first time that an errant piece of ground based electronic gear has fooled the Sarsat Cospas rescue satellite. About 12 years ago the crystal oscillator in an inadequately shielded broadcast graphics machine brought a similar response to a production studio in New Jersey. In that case the Ampex Digital Optics unit was quickly retired from service.

Van Rossmann is faring a lot better. Toshiba has contacted him and offered to provide him with a replacement set, for free of charge. (Published reports)

**

## ENFORCEMENT: SANTA CRUZ PIRATE SHUT DOWN BY FORCE

Government agents have shut down another unlicensed broadcaster. On September 29th agents of the U.S. Marshals Service served a warrant on a Santa Cruz, California pirate radio station.

The target was Free Radio Santa Cruz, an FM station running 35 to 40 watts of power while offering round-the-clock music, activism and other local programming.

The marshals, along with agents of the Federal Communications Commission, dismantled the station's equipment and carted it away in a pickup truck. The warrant bore no names, listing as defendant any and all radio station equipment used in connection with the transmissions.

Those running the station face the possibility of further punitive action in the form of hefty fines and even time in jail. The search warrant gave the station operators 20 days to respond in court. The value of the equipment seized is estimated at $5,000, including the antenna agents removed from the roof.

More on this raid is on-line at www.mercurynews.com/mld/mercurynews/news/9797653.htm?1c (CGC, Mercury News)

COMMUNICATIONS LAW: TELEMARKETERS LOOSE IN SUPREME COURT

The Supreme Court has turned away a challenge to the federal do-not-call registry. The ruling came on Monday, October 4th and upholds the lower court ruling that says the list does not in any way violate telemarketers rights to freedom of speech.

Under a federal law passed in 2003, telemarketers face fines of up to $11,000 if they call people who sign up for the registry unless they have recently done business with them. Charities, those conducting polls and callers on behalf of politicians are exempt. (Published reports)

ALERT: POSSIBLE E-MAIL SCAM TARGETING HAM RADIO

If you get an e-mail with a subject line saying Golden Trust telling you that you have won a lot of money, and its from hamemergency at some unknown dot com, toss it. It may well be another Internet scam targeted to Amateur radio.

Ray Shatzel, W2XC, says over the Internet that he received such a solicitation recently. It told him that he had won $1,500,000 in the Lottery Winners International program held on the July 7th of this year.

Curious, Ray checked it out on the fraud watch international dot com website. There he found out that it is nothing more than another of the many e-mail scams aimed at getting people like you and me to part with personally identifiable information that could be used in an identity theft scheme. They will also ask for payment of taxes, legal fees or other charges before the winnings can be released.

People who fall for it loose what they send in and maybe a lot more.

Our thanks to W2XC for posting this warning to the Internet .
He's
one of the good guys who took the time to find out and to pass along the information so that nobody in the ham radio community gets stung.  (via Internet)

HAM RADIO HELP:  ARRL JOINS HOLIDAY TOY DRIVE

The ARRL is joining with the United Way in a project to brighten the lives of kids who lost everything in the recent hurricanes that ravaged Florida.

--

Thats right Don.  The ARRL is joing forces with a special United Way drive aimed at brightening the coming holidays for kids in central Florida who might not otherwise be able to enjoy the season.  They are the youngest victims of the fall hurricanes that ravaged the area.  Suddenly living out of a tent or car.

To help these kids, hams nationwide are being asked to purchase a new child's toy and send it to this special United Way campaign. Be sure to include a QSL card or 3x5 file card showing your name and callsign.

Send your donated toy before Thanksgiving to Ham Radio in care of the The United Way White Dove Project at  50 Kindred Street, Suite 207 in Stuart, Florida.  The zipcode is 34994.

As we have often said, children are the future of the nation and the world.  They, more than any others, really deserve your support.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF.

--

Again, between now and Thanksgiving, purchase a new child's toy. Send it with a QSL card or 3x5 showing your callsign to Ham Radio, in care of The United Way White Dove Project, 50 Kindred Street, Suite 207, Stuart, FL  34994.  We will and we hope that you will too.
(ARRL)

ON THE AIR:  HZ1AB PERMANENTLY QRT

The Dhahran Amateur Radio Club has been permanently shut down.  This, as the result of telecommunications regulatory changes in Saudi Arabia.

For close to sixty years the Dhahran Amateur Radio Club operated station HZ1AB.  Club Secretary Thomas Carlsson, AB5CQ reported that due to revisions made in Amateur Service licensing requirements by the Saudi Arabia Communications and Information Technology Commission, operations were no longer possible.

The HZ1AB callsign has already been reissued to Bandar Salah AL-Harby.  Carlsson says that the clubs QSL manager, Leo Fry, K8PYD still has all the logs and will process any outstanding QSL card requests.  (WIA News)

**

CONTESTS:  RCA QSO PARTY - NOVEMBER 6TH

>From the contest calendar, word that Saturday, November 6th is the date for this years Radio Club of America 20 and 75 meter QSO Party. The event will start at 4 p.m. Eastern Standard Time on 14 point 280 MHz upper sideband and at 8 p.m. E-S-T move to 3 point 910  lower sideband.  Both frequencies are plus or minus any Q-R-M.  During the party, W2RCA which is the club station of the Radio Club of America will also  be activated.  Logs and suggestions for this contest go to W2ZE by e-mail to mrraide@cbs.com  (W2ZM)

**

CONTESTS:  FISTS COAST TO COAST ON NOVEMBER 24

The 4th annual Fists Coast to Coast contest takes place October 24th from 0000 U-T-C to 2400 UTC.   This is a CW only event with the object being to contact as many Fist affiliated clubs on as many bands as you can.  The contest is sponsored by Northwest Fists club K7FFF.  Full rules and certificate information may be found at //www.tomochka.com/k7fff/fnw_c2c04.html (FISTS)

**

## DX

In D-X, OH2BH and OH2PM will be in Albania from October 26th to the 31 finalizing Project Goodwill Albania and related activities with the hope of bringing a number of new students on the air. Both operators will be on the air from Albania during the C-Q World Wide SSB contest on October 30th and 31st signing portable Zed A. During this trip the two will be accompanied by representatives of the I-A-R-U folks assisting Albanian Telecom in variety of regulatory issues. QSL cards for contacts made go to the operators home call address. (N4GN)

Also on for the CQ Word Wide SSB contest will be eight operators from the North-East calling themselves Team Antigua. will again activate as V-26-B from Antigua and Barbuda on October 30th and 31st and plan to enter the multi-operator two-transmitter category. Operation will be on all bands with a possibility of some satellite contacts on AO-7 and AO-51 More information is on line at http://n3oc.dyndns.org/v26b/ (KA2AEV)

**

## WITH THE YOUNG: THE NORTH AMERICAN YOUTH NET

The North American Youth Net meets every Friday at 23: 00 UTC on 14.329 MHz. According to Steve Anness, KD5OWO, the purpose of this on the air gathering is to get young hams together for technical discussions or just a chance to meet and get to know one another. If you are interested in becoming a Net Control for this gathering e-mail Steve at kd5owo@arrl.net. You can also visit the groups website at http://groups.yahoo.com/group/nayn (KD5OWO)

**

## THAT FINAL ITEM: HAMVENTION 2004 THROUGH TEENAGE EYES

And finally this week, its the Dayton Hamvention as you have never seen it before. This is because its through the eyes of the young. And while we can't show you the pictures here, we can bring you

some
of the sound:

--

Sara K3OOO: "So you are probably thinking, OK I'm into this, but how do I get my license? Well, there lots of stuff. There's study guides. Real cheap. Real easy. You go home. You study for a while and do take your test and you pass and you get your license. No Internet. No wires required."

--

That's 15 year old Sara Saeger, K3OOO, who, along with 18 year old Trevor Conroy, W7TDC, are hosts of a new video about Hamvention 2004 produced for Icom America by of John Webb, W7NWH. But this show is not a commercial for Icom brand ham radio gear. In fact, its as if John borrowed a bit from Cole Porter's grand old Broadway musical.
The one whose title is "Anything Goes":

--

Trevor W7TDC: "Right over here we have DX Engineering, a manufacturer of components that actually allows you to build your own antenna. Antennas can be big. Antennas can be small. But theres one thing thats true about all of them. They all get your signal in the air."

--

Thats the other half of the anchor team and if Trevor sounds excited about building antennas it's because he knows just how much fun it can be. And while Sara and Trevor are our guides, they are not only young people in the new Icom show. Meet Rebekah Dorff, WG4Y, of Alabaster, Alabama:

--

Rebekah W4GY: "Ive been a ham since I was 8. I got my Tech when

I
was 8, my Extra when I was 9 and then I got my DXCC when I was 10 and then I got appointed as the Assistant Section Manager this year."

--

The bottom line. This is a new world of Amateur Radio and a lot of young people are getting excited about it once they find out just how much fun it can be. Thats because it gets you away from a computer screen and gives you new friends all over the world:

--

Unidentified youngster: "Hopefully I will get my license today
and I
will finally be able to talk to Russia."

--

If you are one of those who really care about the future of ham radio and want to see what it looks like through Sara and Trevor eyes, then go to www.icomamerica.com/amateur/video and have a look for yourself. Better yet, have your kids -- or your friends kids watch the show with you. Once you do, we guarantee that none of you will ever view ham radio the same way -- ever again.

Our thanks to Ray Novak, N9JA, and the fine folks at Icom America for funding this important new ham radio video and making it available on-line. Again that URL is www.icomamerica.com/amateur/video on the World Wide Web. (ARNewsline™)

: Yeah, it's called 'a lot of other things going on'.

Judging by the obesity epidemic going on in this country, none of the
"other things" involve very much physical activity (except flipping the
remote and playing with a joystick)  Or is listening to the radio such an
intense experience that it requires 100% of your attention?

Regarding your item number one, who gets to be the arbiter of this "Fairness?" Government?

Regarding items two through four, I would argue that the problem is, and always will be, program content. You'd never know this if you read the industry rags; they are obsessed with digital transmission methods, but if the monopoly ownership rules aren't attended to, radio will dwindle and, eventually, die.

So, why doesn't the government also require newspapers to have a balance of voices and opinions?

What are the details of this rewrite?  The old fairness doctrine was a club for partisians and others with an ax to grind.  How would the new fairness doctrine keep the political partisans and kooks from harassing media stations with nusiance complaints?  Who would define what a nuisance complaint is?

Should this new fairness doctrine cover internet radio, satellite radio, satellite TV, and cable TV?

Yeah, people listen to what they want to listen to.  I have no idea if the IQ factor is up or down.  I am sure people would be stupid to be listening to things they don't want to listen to.

I am also sure there has never been as much bad radio as there is now. There has never been as much radio as there is now.    There are more stations broadcasting more hours than ever before.  Too bad.  As a radio hobbyist, I miss the days of easy coast to coast dx'ing.

I dislike most of the stuff on the radio.  So what?  There's still plenty to listen to.  Nobody makes me listen to Limbaigh, and I don't.  I can't stand Sport Babble but I don't have to.  Mostly I listen to a local FM Jazz station and US domestic shortwave radio.  For me, radio has never been more entertaining.  There are also some local Spanish and Polish language AM stations here with good music.  Very little of this was around 30 years ago.

> 3. No, what I would really like to see is an ownership cap of seven to a
> dozen stations per entity with no cross ownership. Then there might
> actually be some creative programming and diversity - you know, like there
> was for the first 75 years or so..

When was there more radio diversity?  When there were three of four radio networks, each playing their own similiar so-so comedies or dramas?  When each of  the top 40 stations in the US were playing "Muskrat Love"?  The radio industry is like the rest of the entertainment industry.  As soon as somebody comes up with an idea which grabs a part of the audience, that idea gets reused over and over in each market.

>.. Imagine! stations with different
> studios, different personnel, maybe even different program directors! Then
> they wouldn't sell for over inflated amounts and we wouldn't get stripped
> down, dumbed down voice-tracked generic dog-vomit programming!
> 4. Radio listenership is down by 15-20%. There's a reason for that
>
>

If that's true, then the problem will fix itself.  These overpriced radio stations will soon go for giveaway prices.  You'll buy a radio station and so will I.  I will realize that your programming ideas are so good, I'll copy them all!!

Frank Dresser

MT,

Make up Two Sets of 100 Post Cards each.

These Post Cards will 'detail' BPL Interference Problems with
your Local AM/FM/TV Stations.  Go around ringing Door Bells
and have your Neighbors and Friends Sign them.

Add a Postage Stamp and Mail them.

Send one set to your Congressman for them to "Inquire About"
to the Regional FCC Office.

Send the other Set to the Local AM/FM/TV Stations.

The 'business' of BPL will will Die Quickly, when it "Costs"
Big Business like AM/FM/TV Stations MONEY !

~ RHF

```

A new tool to help hams evaluate the impact of Broadband over Powerline has just been made available on the Internet by an Australian radio amateur. It`s based on the work of a European consortium that is trying to set a world standard for BPL radiation limits. Owen Duffy, VK1OD, is the ham who made it happen:

Current BPL technology works by conduction of signals in the radio frequency spectrum up to about 100 MHz. Existing power lines networks are not ideal RF transmission networks, they will radiate radio frequency energy causing interference to radio communications services, and they will be susceptible to interference from nearby transmitters --- radio or otherwise.

The European Committee for Electrotechnical Standardization, CENELEC, are developing a standard for ``Electromagnetic emissions from access powerline communications networks.`` Access powerline communications networks are commonly termed Broadband over Power Lines or BPL.

The proposed CENELEC standard does not automatically apply globally, though countries like Australia draw heavily on international standards, such as CENELEC`s for their own jurisdiction.

This proposed standard would set limits for the conducted energy and radiated energy of BPL systems. The radiation limit is specified for example as a field strength in dBuA/m in a measurement bandwidth at a specified distance on particular frequency, and its impact will not be immediately apparent to most radio users.

Do you know what the impact of +4dBuA/m in 9 KHz at 3m is on your receiver?

The BPL Interference Evaluation Tool allows evaluation of the impact of BPL interference under the proposed CENELEC standard given a set of location/application specific parameters. Go to the BPL Interference Evaluation Tool at http://www.vk1od.net/bpl  and enter the details for your site and discover the impact. (WIA News via ARNewsline(tm) October 22 via John Norfolk, dxldyg)

## FCC RULE CHANGES TO PROMOTE BROADBAND

Here in the United States, very little attention appears to have been paid to two other FCC actions amid last weeks FCC decision on BPL. But both are designed to help promote different forms of broadband Internet access. This is important because they will be giving Broadband Over Powerline a run for the corporate dollar profit. Amateur Radio Newsline`s Bruce Tennant, K6PZW, has more:

In another vote taken at their October 14th meeting, the FCC loosened restrictions on fiber-optic networks built by local phone companies, encouraging them to make greater investments in so-called fiber-to-the-curb`` and fiber-to-the-home networks. According to the Commission, and as reported in a bulletin from CQ, the ruling will encourage deployment of fiber optic broadband networks capable of delivering advanced data, video and voice service by local telephone companies.

Prompted by the decision, several big telephone companies said they would move more rapidly to build fiber networks to homes. SBC says it now plans to provide 18 million households higher speed Internet services in two to three years, rather than five years as previously announced. So far, Verizon Communications has been the most active in building residential fiber networks.

And there is more. The day after the BPL vote was taken, the FCC`s Wireless Telecommunications Bureau announced a joint effort with the U.S. Department of Agriculture`s Rural Utilities Service. This, to advance the deployment of broadband wireless telecommunications across rural America.

It`s called the Rural Wireless Community VISION Program. Its purpose is to bring experts from both agencies into rural communities selected as models to help provide technical, financial and other assistance in launching wireless broadband services in those areas.

All of this adds up to a lot of competition for BPL from the day it gets going.

For the Amateur Radio Newsline, I`m Bruce Tennant, K6PZW, in Los Angeles.

As we go to air, it is unclear whether either of these actions are efforts to promote multiple types of broadband, or, possibly a no confidence vote in the long-term potential of BPL.

More information on the program is available online at http://wireless.fcc.gov/outreach/ruralvision/index.html. (CQ)

Press Releases
Date: 22.10.2004

As the Boston Red Sox attempt once more to reverse the 'curse of the Bambino' by taking on the St Louis Cardinals in baseball's World Series, BBC Radio Five Live will be there to convey all the excitement back to listeners at home, with full live commentary on Five Live Sports Extra.

The Red Sox haven't won a World Series since 1918, two years before they sold baseball legend Babe Ruth to arch rivals New York Yankees.

Since then the Sox have endured almost a century of misery, failing to win the World Series a single time.

This is the first time since 1967 that they have played the St Louis Cardinals, and on that occasion the Cardinals won.

Up All Night (1.00-5.00am daily) will have live coverage from the games throughout the series.

Five Live Sports Extra will carry live commentary of the first six games, with the seventh game, if it goes that far, being on BBC Radio Five Live.

Simon Brotherton will commentate on each game with Josh Chetwynd, catcher for Great Britain's team, providing expert analysis.

The first two games are at Boston's ground, Fenway Park, on the nights of 23 and 24 October, then the next three are at Busch Stadium, home to the Cardinals, on 26, 27 and 28 October.

The sixth and seventh games, should they be required, are back at Fenway Park on 30 and 31 October.

Five Live Sports Extra coverage from Boston start at 12.25am and from St Louis Busch Stadium at 12.55am.

Listen to Five Live on AM, on digital and online.

I've noticed that there have been a decent amount of posts here regarding satellite radio.  It comes as no surprise that there ought to be posts somewhere about one of the fastest growing technologies ever, but it did surprise me that there isn't any newsgroup dedicated it satellite radio.  I have submitted a proposal for alt.radio.satellite in alt.config and I've come here just to gauge any interest people may have in posting to the proposed group and to justify if it is worthwhile or not.  If some could reply showing their interest or lack thereof, it would be greatly appreciated.

Thanks,
Mark VO1ONE

This will be violate the FCC license of broadcasting. Sinclair's
broadcasting license should be terminated by law.

Two very important historic programs are scheduled for broadcast on consecutive weekends in "Wavescan", the regular DX program from Adventist World Radio. One program features a 60 year old broadcast from an American radio station in New Zealand, and the other features what is believed to be the world's first off-air recording from an old wireless station in California, a recording that is more than 90 years old..

Over in New Zealand, the noted radio historian, David Ricquish, was performing a spate of research in the sound archives of Radio New Zealand in the picturesque south island city of Christchurch, when he came across a very significant piece of old radio history. He had re-discovered the first, inaugural broadcast from the AFRS station 1ZM in Auckland in the north island.. Originally, station 1ZM was a privately owned commercial station that was subsequently taken over by the government and then loaned out to AFRS, the American Forces Radio Service, back in April 1944. The original recording from this station, that was one of the famed "Mosquito Network" stations, is thought to be the only example now in existence of an off air broadcast from an AFRS station in the Pacific. This orginal recording was presented as a major feature in the shortwave programming from Radio New Zealand International, and RNZI has made it available for worldwide usage in the AWR DX program, "Wavescan".

One week later, listeners to "Wavescan" will be able to hear an off-air recording that is even older. Just recently, Glen Sage in Portland, Oregon, uploaded an old Morse Code recording onto his website. This website gives the content of the message which was transmitted in the old original version of the Morse-Vail Code. A further spate of research would seem to indicate that this recording. on a cyclinder covered with tin foil. was made off-air from a Morse Code broadcast that was transmitted from station TG in San Francisco shortly before 3 pm on Monday July 4, in the year 1910.

The AFRS-1ZM broadcast in "Wavescan" is scheduled as follows:-
AWR worldwide network & associated stations - Sunday October
31
WRMI Miami 6870 kHz: Sat night 10:30 pm ET, 0230 UTC Sunday
Oct 31 UTC

WRMI Miami 6870 kHz: Sun night 11:00 pm ET, 0400 UTC Monday
Nov 1 UTC
NASB-RCI Sackville Canada in digital mode - Sat Oct 30, 11900
kHz

The 1910 radio broadcast in "Wavescan" is scheduled as follows:-
AWR worldwide network & associated stations - Sunday November 7
WRMI Miami 6870 kHz: Sat night 10:30 pm ET, 0230 UTC

Sunday Nov 7 UTC

WRMI Miami 6870 kHz: Sun night 11:00 pm ET, 0400 UTC Monday
Nov 8 UTC

Dr Adrian M. Peterson
DX Editor,
Adventist Wolrd Radio.

Just wait until they fire up a BPL injector in your neighborhood and you
have to try and listen over the top of the noise those things generate.
You can forget using 2-80 Mhz within a mile of one of those injectors

Do you have a news background?  It's not apparent.  There's a difference between a hatchet job like the Swiftees, and the derivative (and now aborted) Sinclair slam, and the usual campaign rhetoric.  The news media isn't obliged, for example, to find out what the local Ku Klux Klan wizard has to say about a discrimination case, and Halperin was doing what responsible news media do...providing balance while measuring just how much balance is needed.  CNN's debate analysis is one such acknowledgement that the responsible news media does not parrot what either candidate says verbatim.
In this case the misrepresentations by the Kerry campaign pale when compared to the disconnect from reality that the Bush campaign is trying to sell.  Quoting: "MILBANK:
I think there is a bias in favor of fact versus fiction. And I think that the Halperin memo, if you read what he's actually saying at the time it was written, he is saying there has been a larger number of misstatements, of dishonesty on the Bush side." (http://transcripts.cnn.com/TRANSCRIPTS/0410/17/rs.01.html or http://tinyurl.com/6t456).

Much of the problem lies in the fact that the electorate is ill-prepared to handle the level of complexity when discussing the method by which social security and medicare are funded, or what the real deficit is, or what happens when the rest of the world decides that they've had enough of holding "promises" of payment (the unchecked current account balance and trade deficits that the U-S has racked up) and decides to swap their dollars for Euros.  In the process of simplifying for the uniformed, a lot of that detail is lost, making what appears to be a "misrepresentation".   Bush, on the other hand, repeats incessantly claims which any well-informed person knows to be bogus, claims like Iraq is under control (you know that the U-S death toll is over 1100 now....we're losing troops at an ever-increasing clip, now over 100/month.  At this rate, we'll have doubled the U-S death toll before October next year, when it took 6 months more, with a "major" military assault at that, to get to this point.  No wonder parallels to Vietnam are made ever more often).

You realize, first of all, that (at least until recently) the rise in the cost of oil, when measured in Euros, was 1/10th the rise in U-S dollars.  You also realize that Bush's "efforts" to control the cost of oil may be a ruse, seeing as the campaign is running now in a manner which shows that they know they may lose this one, so it's a matter of cleaning off the table before the game gets raided, so as to "take care" of the administration's friends in the oil industry before Bush loses the keys to the car.  Why do you think the Bush administration *continues* to buy oil for the strategic oil reserve, when there's virtually no place to put it?  He's running up the market is what.

"Prosperity's right around the corner..."  Even for those getting rich off this market adjustment, it's not really making a killing if you get twice as much income, in dollars worth half as much.

Watch what happens when Kerry wins.  Stock market - up by 20%.  Oil - down $15/bbl. Dollar - up 5% (can't go much further....there's that nasty deficit, after all). Do you think that the world, who to-a-one wants Bush out, is going to let us off the hook before we boot him out?  The world has the power to bring the U-S to its knees economically.  Fortunately for Americans, they like us - just not the guy in the White House.  If Bush wins, there will be no holding them back.  I'd short the dollar.  That day.

> Should this new fairness doctrine cover internet radio, satellite radio,
> satellite TV, and cable TV?

Never mind the rest of it....here's the deal.  As I've said elsewhere, the reason for the Fairness Doctrine is due to the fact that broadcast spectrum is a limited commodity, where the existence of one station eliminates the possibility that another can be in the same area on the same channel (and a few adjacent, too).  This hard, physical limitation means that there is no opportunity for a diversity of voices...unlike the printed word, where all it takes to get your opinions out is a printing press and a ream of paper.  The Fairness Doctrine simply encouraged (even coerced) broadcasters to air opinion/issue programming, and provide an opportunity for those in dissent to provide their opposing view...analogous to "sharing" the printing press.

Satellite radio is subscription, so listeners have already made their choices in the most concrete mannaer possible...with their wallets.  There is no practical limit to the number of internet radio stations, and likewise satellite and cable TV doesn't use spectrum, and so has no practical limit on how many service can be delivered. Thus, in the absence of those limits, there is no need to promote diversity of voice and opinion.  It's inherent in the service.

The Fairness Doctrine is needed only for the medium where a diversity of voices is reduced when a service limits, by its existence, the ability for others to be heard.

I live in a big city.  The radio spectrum here is saturated, and I don't
think it would be much more diverse if there were an infinate number of
possible stations.

>The Fairness Doctrine simply encouraged (even
> coerced) broadcasters to air opinion/issue programming, and provide an

It discouraged political programming in the sense that it forced opposing
viewpoints.  No political programming is easier than trying to strike a
subjective balance.

There was alot of bad radio forced on the public during the fairness
doctrine days.  Well, people weren't really forced to listen.  They just
tuned out.

Just as a nit-pick, and I don't think it changes the thrust of your point,
but there is also alot of free audio on the non XM and Sirius sattelites.

> The Fairness Doctrine is needed only for the medium where a diversity of

People who want to be informed are informed.  They can read newspapers,
listen to news stations, surf the net, etc.  I don't think people who don't

much care to be informed have ever appreciated the accidental information from their favorite radio station.  They just tuned out.

And how do we keep any sort of fairness doctrine from being used as a tool of political harassment?

Frank Dresser

Hello Folks,

I would like to see a Usenet alt.radio.satellite Newsgroup established.

Presently there are of couple of Web Forums run by individuals who also marketing XM and Siruius Satellite Radios where various topics concerning Satellite Radios are discussed. These Web Forums are the only places were individuals can visit and discuss these Satellite Radio topics. With close to 2 � million Satellite Radio subscribers I fell that the present Web Forums operated by XM and Siruius Satellite Radios retailers are inadequate and could also be considered inappropriate because of conflict of interest concerns.

At times for various reasons these Web Forums become unavailable. Sometimes the Web Forums experience server crashes, which could led to valuable information being lost. Also the personal views of the operators of these Web Forums sometimes lead to censorship. Considering all the disadvantages of the present Web Forum situation I believe the close to 2 � million Satellite Radio subscribers deserve to have a to have a Usenet alt.radio.satellite Newsgroup established.

I encourage the members who frequent Usenet rec.radio.broadcasting Newsgroup to support the efforts to create a Usenet alt.radio.satellite Newsgroup.

Best Regards,
Fred

For sale:

Partial interest in full-time AM in large city in Australia. Perth, WA (Western Australia). In population, this is the 4th largest city in the country. About 1.7 million.

CP for 1692 KHz, non-directional, 400 watts, 24 hours. Licensed to Perth.

Less that $50,000 US!!!!!

Active (huh!) or inactive investors with $10,000 min. are welcome. All investors would be on the board with full voting rights if desired.

For $140,000 US we'd get three licenses with a total predicted listenership of about 2 million people!

I have checked the Australian equivalent of the FCC (ACA....Australian Communications Authority)and the CP is real.

I am a semi-retired radio engineer living in Macon, GA. My tel. is: (478)741-1710.

No "AM bashers" or other negative nabobs, PLEASE!

Hurry! (Sharp)operators are NOT standing by! Hi!

73,

Meyer Gottesman, W6GIV
aka The "Radio Crazy"

> There is  alt.satellite.radio.europe.

So, what about satellite radio outside of Europe?  Besides, that group was improperly created to begin with.  alt.radio.satellite would be more apt to conform to existing heirarchy, and would include all of satellite radio, not just satellite radio in Europe.  That would exclude XM and Sirius which between them have over 3 million subscribers.  Worldspace operates not only in Europe, but Africa and Asia, as well.  Now, we have MBCo in Japan on the horizon; where will they discuss their satellite radio?

Sunday October 24, 2004
Podcasts: blogging for the ears
The LA Times

First came pirate radio, then Internet radio. But in the past month, a new way of circumventing the broadcast corporations has emerged: podcasts.

Tune in to these blog-based homemade radio shows and you'll hear any number of things: a weekly hourlong program about board games; a daily amateur photography show hosted by an Australian computer programmer; regular people, unschooled in the ways of radio, talking about anything and everything the way real people talk - clumsily, with curses, dead air and all.

If you've never heard of a podcast, don't worry. Neither has Google. Type "podcast" into the search engine and it yields results but also asks, "Did you mean: broadcast?"

Well, yes. Sort of. Podcasts are broadcasts only in the loosest sense. They don't use megawatt transmitters to send signals tens or hundreds of miles like terrestrial radio. Listeners can't hear them live because they are prerecorded sound files; they don't stream in real time like Internet radio.

A sort of TiVo for amateur online audio, podcasts are radio-style audio files posted inside blogs as MP3s that can be downloaded to an iPod or other portable player. And they represent the next wave of peer-to-peer content sharing - unlimited by available FM/AM spectrum, untouched by FCC regulations, portable and full of possibility.

An audio extension of written blogs, podcasts are almost exclusively talk at present. They are also almost entirely hosted by tech-savvy "early adopters" who are working out the kinks. But that is changing rapidly as the technology for producing and distributing podcasts becomes easier to use.

A month ago, the only podcast was "Trade Secrets," a daily news-and-technology talk show co-hosted by podcasting's pioneers: former MTV VJ Adam Curry and software developer Dave Winer. Curry is the brain behind iPodder (software that automatically locates podcasts); Winer is the developer of the format that lets podcasts be found.

In the four weeks since "Trade Secrets" was born, the number of podcasts has jumped to at least six dozen. Podcasts don't follow a traditional broadcast model. They follow in the footsteps of blogs.

In the blogging world, success isn't measured in market share and ad dollars. It's measured in the personal satisfaction of creative expression and the organic growth of a relatively small audience via word of mouth. Already, that word of mouth is strong. According to Winer, listeners to "Trade Secrets" jumped from 1,000 to 6,000 in a single week.

"One of the reasons that blogging succeeded was it didn't just lower the threshold of publication to zero, it made it as easy as e-mail." said Linux Journal senior editor Doc Searls.

In 1999, when Searls first began blogging, he said there were just a couple dozen other bloggers. Five years later, there are at least 4 million. Podcasting, he said, has similar potential.

Hello Folks,

I would like to see a Usenet alt.radio.satellite Newsgroup established.

Presently there are of couple of Web Forums run by individuals who also marketing XM and Siruius Satellite Radios where various topics concerning Satellite Radios are discussed. These Web Forums are the only places were individuals can visit and discuss these Satellite Radio topics. With close to 2 � million Satellite Radio subscribers I fell that the present Web Forums operated by XM and Siruius Satellite Radios retailers are inadequate and could also be considered inappropriate because of conflict of interest concerns.

At times for various reasons these Web Forums become unavailable.

Sometimes the Web Forums experience server crashes, which could led to valuable information being lost. Also the personal views of the operators of these Web Forums sometimes lead to censorship. Considering all the disadvantages of the present Web Forum situation I believe the close to 2 � million Satellite Radio subscribers deserve to have a to have a Usenet alt.radio.satellite Newsgroup established.

I encourage the members who frequent Usenet rec.radio.broadcasting Newsgroup to support the efforts to create a Usenet alt.radio.satellite Newsgroup.

Best Regards,
Fred

I never said that oil would be $30/bbl. If you do the math (something which seems to be foreign for those with your political bent) you'd see that I was predicting that oil would return to a more manageable, albeit more espensive, $40/bbl.

> If Kerry wins we will be back to Jimmy Carter Style Economy, Oh those were
> the days, Low Inflation and Interest rates that everyone loved...

At least we were paying for the economic sins being committed then. We were paying our bills, and giving the rest of the world a reason to hold on to dollars. And even then, Carter's deficit was 1/10th what Bush's is now. How long do you think it'll be before the investors in our dollar (China and Japan, mostly) will seek better returns and a greater likelihood of retaining the value of their investment elsewhere? If interest rates don't rise soon, that's exactly what's going to happen.

The Fairness Doctrine worked well for decades in that it held stations to the one of the responsibilities required of them under the terms of their licenses--to air alternative points of view. It gave alternative points of view a right to time on the public airwaves, something sorely lacking today. In fact, it's been an ever increasing spiral down the tubes since the FD was repealed. What passes for public discourse on the airwaves today--even with the expanding universe of outlets--is a travesty. And you and I have no right to respond in kind. The FD kept agendas from spinning out of control and kept most discourse civil and centered.

As you must know, Frank, newspapers do not require a license to operate and the Communications Act does not designate them as a public resource. The fact is--the FCC violates the spirit and letter of the Act when it comes to its stewardship of licensed radio and tv stations. And no one in Congress cares because of copious amounts of NAB money.

In short, it all stinks.

JMHO,
John Figliozzi

Anyone heard Radio Huaya lately? (Wasn't it on 2390 kHz?)

-------------

"For roughly three decades, Radio Huayacocotla (pronounced hway-ah-koh-KOHT-lah), a 500-watt short-wave community radio station deep in the heart of rural Veracruz state in east-central Mexico has served as an audio lifeline for some of this country's poorest and most overlooked people. Broadcasting eight hours a day, six days a week, in a region where the illiteracy is high and the technology low, the station is many people's main news outlet. And as the only licensed radio station operated primarily by and for indigenous Mexicans, it's a unique source of two other commodities that some deem crucial to this community's long-term survival: regular contact with distant loved ones, and the freewheeling, improvisational music called son huasteco."

On a very vaguely related subject...

The Canadian Radio-television and Communications Commission (CRTC) has=20
denied an application for a new 14,500-watt religious station in=20
Kawartha Lakes, Ontario. (near Peterborough)

"The Commission finds that the supporting intervention filed by Salem=20
raises several questions with respect to the financing of the proposed=20
undertaking, particularly regarding the source of funding for the=20
installation of the station=92s transmitter. The Commission would have=20
expected this information to have been filed by the applicant as part of=20
the application process."

Salem had agreed to build the station's transmitter facility and lease=20
it back to the licensee; they then filed comments supporting the=20
application.

By James Benedict (N8FVJ) on October 15, 2004

Although many hams do not have that 'You done me wrong' attitude like in a country song, it does surface a lot in this hobby.

I believe the negative attitude is contributing to the shrinking ham hobby. This is highly visible in replies to articles, eHam Product Reviews and the eHam.

Even honest eBay sellers like myself have issues with hams complaining via feedback. If a carrier damages a box and the item inside is undamaged, I get a neutral. Or an item was lost, full refund issued and a negative resulted within 24-hours after receipt of funds. How about a ham that purchases two new tubes, one tube is missing the box & items listed as used tubes.

Complaint on the feedback was issued & items were sold about 25% of market value. This is 3 of 6 sales in the last 8 months. 1000+ sales to audiophiles resulted in three neutrals & no negatives. I did not post the above as a complaint, just the facts.

Hobbies are pursued for the fun element. With an 'outsider' looking in, is it any wonder some pursue other avenues? Or others simply leave the hobby. An example of another hobby is the audiophile interest. Lets narrow it down to vacuum tube audio. This is a very small group within the hobby itself. Quite frankly, the hobby is expanding unlike ham radio. The audiophiles are pleased to have new products and are supportive of the suppliers. A group of DIY audiophiles are learning electronics as fast as they can and building their own equipment. The DIY type musicians group is also learning electronics to build amplifiers.

One business that used to be involved in ham radio was Amp Supply many years ago. I remember when these quality RF amps were viewed with rumors of poor quality. Now these vintage RF amps not only sell quickly, demand way outstrips supply. I have had excellent performance from Amp Supply products.

The owner of Amp Supply quickly got out of the ham business and settled on making a good living in the audiophile hobby over the last 12-15 years.

In closing this article, I suggest the hams should support their suppliers and retailers. Stop shopping for that last dollar in savings and simply refrain from complaining about nothing. It is not good for the hobby.

Moscow - Idaho
October 15, 2004
By Greg Meyer

Several years ago, the Federal Communications Commission (FCC) announced it was taking license applications from groups who wanted to start non-commercial, low-power FM radio stations in their communities.
That's when a small band of radio people got together in Moscow, with the idea of starting an independent, free-form station. The result is a brand new 100-watt FM station which is now on the air - KRFP-FM.

Borrowing the catchy tag line Radio Free Moscow from the good old days of KUID-FM, free-lance radio reporter Leigh Robartes and some like-minded folks set out back in 2001 to make their dream a reality.

"Because of the homogenization of radio, and because of the large chains that sometime own more than 1,000 stations in this country, localism has gone out of radio," said Robartes.

KRFP has been on the air since Tuesday, and can be heard throughout Moscow and even out into the countryside. Leigh Robartes is thrilled, but admits it has been a long road getting to this point.

"We were up against an FCC-imposed deadline in late November," he said. "If we weren't on the air by a certain date we would have lost our license opportunity forever. We had 18 months to get on the air, and we made it in about 16 and a half months."

The station is located upstairs in the 100-year-old Anderson building in downtown Moscow. And there is still plenty of work left to do before holding any kind of open house.

"You know, we have to adjust levels," said Robartes. "We have to hook up the turntables and the tape decks. We have to move computers around. We have to get our automation system going, because, in the middle of the night, we're going to probably run on automation, at least until we get enough DJ's to run 24 hours."

Some $20,000 needed to be raised to get the station on the air and fund raising is ongoing to keep it on the air. Volunteer DJs, talk show hosts and field producers are still needed to round out the programming schedule. Robartes said the focus will be on providing the community with a variety of news, information and music.

"We're planning on having a local news department," he said. "We're going to go around and record local events, like panel discussions. We did the candidates forum, which has already aired, with the League of Women Voters. We're going to have call-in talk shows. We have two phone lines, so we definitely want to engage the community in community issues. And, of course, we're going to have music shows."

So, if you're in Moscow or driving through Moscow, and you want to tune in to a brand new station, just set your FM dial to 92.5 and check out Radio Free Moscow.

Anyone interested in helping out the non-profit organization that operates the station can call them at (208) 892-9300 or visit their web site at:

>I saw a TV news story that said power transformers acted as ''speed bumps''
> on the information superhighway.  Have they found away around this?  Or is
> the powerline Internet service still slower than competing technologies?

This is, in my opinion, a gimme by the FCC to the power distribution companies who
want into an industry far above the old technologies they're in now.  I've said
for
years, when a British firm was doing trials, that this technology would never work
-
that the power lines, being unshielded, would be both a source of interference and
prone to noise and intermodulation from the alternating current being transferred
by
the lines' primary function.  The trials were scuttled prematurely, for all these
reasons.  The fundamental problems still exist, and the methods needed to work
around
them require equipment which interfaces and/or is raised to lethally high
voltages.
To maintain the system would require conventional power linemen, wearing gloves
and
other protective clothing.  You can imagine what level of service is to be
expected
under these circumstances.  Further, as power lines are the top-most utilities on
a
utility pole, they're most prone to lightning hits, as well.

I'd stay away from this, if an investment opportunity were to come around.  It
wouldn't be the first time the FCC has type-accepted a failed technology, and it
wouldn't be the first time that a proposed standard's supporting technical
documentation wasn't "cleaned-up", if you know what I mean, so as to demonstrate
to
the Commission that it met the requirements necessary for type-acceptance.

Pirate Radio 603 AM is currently broadcasting from the St Paul radio-ship on
603 kHz AM from and for Mariehamn on the Aland Islands, inbetween Finland
and Sweden.

Listeners from further afield can use the internet to listen to a 24k audio
stream on Winamp or Real player. Listeners wishing to use Windows Media
Player will have to start WMP and then select 'File', then 'Open URL' (this

can also be accessed by the shortcut Control+U), then type in http://213.204.48.205:8000 and press 'Play'.

During live shows, MSN Messenger or Windows Messager can be used to type messages directly into the studio. Open MSN/Windows Messenger, select 'Contacts', then 'Add Contact'. Follow the instructions and specifiy the new contact is pirateradio603@hotmail.com.

E-mail can be sent to mikespenser@hotmail.com but make sure the subject includes something about Pirate Radio 603 AM to avoid him thinking it is another Viagra advert!

Other valid e-mail addresses include pirateradio603am@hotmail.com or for Mike West, mikewest@rtidigital.com

I went to school in Woodland, about 20 miles north of Dixon. Had the
fortunate opportunity to visit the Dixon VOA transmitter site (this
was in 1970).  Our physics teacher had connections, I guess.
I was sorry when VOA closed it down.

By Patrick Cloonan, Daily News Staff Writer
October 15, 2004

Forty years ago, on New Kensington's old WKPA-AM 1150, a native of southern Italy began offering a taste of the old country to fellow immigrants.

It was a taste that soon would have the flavor of a new sound from another part of Europe - the Beatles' invasion of the English-speaking musical world.

"The worldwide music changed, too," Sal Patitucci said. "Even in Italy, you cannot hear the old romantic music."

In case you wonder, there's even rap in Italian.

"Music is a mood, that's all that is," Patitucci said on the 40th anniversary of "Radio Italia," now heard from 5 to 6 p.m. weekdays and 1-2 p.m. Sundays on WKFB-AM 770.

"As a matter of fact, you can listen to my Italian program, without saying, 'I cannot understand the words,'" Patitucci said. "You will enjoy the music, even if you like rap, even if you like rock 'n roll. If you go today to Italy, and you find a jukebox, 95 percent is American music. The Beatles changed the way of thinking, musically."

Patitucci is retired from 28 years with U.S. Army Corps of Engineers. In February, he left a longtime berth on WEDO-AM 810 for a new home in WKFB's North Versailles Twp. studios.

WKFB offered a better rate, to an ethnic broadcaster who in turn goes out and sells commercial to pay for that time.

"I still have a good relation with the people on WEDO," Patitucci said. "As a matter of fact, (General Manager) John James is a very good friend of mine. It was just an economic (matter) because today everything is higher."

WKFB is the latest stop in a career that included WKPA (now WGBN), WMBA-AM 1460 in Ambridge, WHJB-AM 620 (now WKHB), WDUQ-FM 90.5 and WYEP-FM 91.3.

There also was television, a weekly show from 1974 to 1979 on WPGH-53. Ethnic programs have disappeared from local television, but technological advances - satellites and digital cable - can bring foreign language programs into living rooms around the clock.

"I have RAI 24 hours a day," Patitucci said. "I can watch a soccer game from Italy, I can watch the news live from Italy."

As was the case at WEDO, Patitucci is part of an eclectic mix on WKFB, including doctors' shows, weekend car care talk, sports, religion and oldies. "Radio Italia" is the only ethnic show on AM 770, while AM 620's mix includes polka shows that fill 10 hours every Saturday.

"After 1964, '65, '70, the Italian immigration is changing," Patitucci said. "Now, you find doctors and professional people."

Some things haven't changed - there's still news from RAI, the Italian national network. And the program still shifts with a daytime-only schedule - effective Nov. 1, to a 3-4 p.m. slot.

Patitucci has done several programs carried by RAI on its international shortwave service, and hoped to do it again. "It was a beautiful way to talk to the community around the world."

Meanwhile, there's the Italian community covered by WKFB's signal, reaching from Youngstown, Ohio, to Cumberland, Md., and from Fairmont, W.Va., to Punxsutawney.

For it, there are interviews, such as a recent talk with an official from Italy's Calabria region that was reported in detail this week on a Web site there (with several references to Patitucci and WKFB). There's also a daily calendar - and there's music.

"I have to play music for everybody," Patitucci said. "For instance, Monday, after the news from Italy, I play the oldies. On Tuesday, I play folk music. On Wednesday, I might play, for instance, a Neapolitan song.

"And also I play the hit parade every day." It is a selection as varied as "Radio Italia," a show that continues to appeal, as Patitucci put it, to "toti gusti." To all tastes.

hello,

I am very interested in the history of radio ,and i was wondering if any one in your group knew where the first radio station in the united states was located.Thank you for your time and help.

I suspect politics are behind it.  Not the political differences between
liberals and conservatives or the presumed differences between Demorcrats
and Republicans.  It's the politics of opportunism.  Anyone who acts to
restrict BPL on technical grounds will be called a "thief of broadband
rights" and "a pawn of the telecommunications establishment".

The FCC commissioners put themselves into a no lose situation by allowing
BPL.  If it works, they take the credit.  If it fails, they don't get the
blame.

>The fundamental problems still exist,

Thank you for making sense.

[snip]
>
> I'd stay away from this, if an investment opportunity were to come around.

[snip]

One of the major BPL suppliers has publicly traded stock. They've gone
through a big decline, and are a penny stock now. A terrific buying
opportunity for those who are certain BPL is the next big thing!!

I was reading that article and the replies. I think this poster sums it up very nicely about many in this hobby and group. I love it. Hit it Right on the head. Very good.

Ham Radio Attitude  Reply
by EHAM_GUEST_001 on October 15, 2004  Mail this to a friend!
As far as the ham attitude, it does suck. Hateful people in it.

As far as buyers complaining on eBay, you should sell adult toys and videos. People that get some every now and then have much better attitudes than the loser, non-bathing, obese, antisocial and self righteous individuals in this hobby that get none.

Closed toilets and an unpaid bill. The present owners and operators of the radio ship "St.Paul" ("Pirate Radio 603") failed to pay a bill of 289 Euros which was due on 30 September for the ship' s anchorage costs in the harbour of Korrvik, �land Islands, Finland. Meanwhile, the harbour administration ordered to close the toilets onboard of the ship, so that the water in the harbour will not be polluted. Unfortunately we didn't find out about it till this morning, but Dutch commercial broadcaster Radio 227 has started a weekly programme on the history of offshore radio. The first one was broadcast yesterday evening. The programme, called 'Laissez Faire' [the name of the ship from which the original radio 227 broadcast in the 1960's] is aired between 2000 and 2200 local time on Saturdays. It includes audio fragments and music of the time. Next week Thijs Lieffering, who was one of the first DJ's on Radio Dolfijn, will be the studio guest and will talk about his memories and experiences. Presenter Look Boden is interested in hearing from anyone from the era who would like to contribute. He can be contacted at l.boden@radio227.nl. Radio 227 is steadily increasing its cable distribution and now reaches a total population of 4.2 million. A live stream is also available on its Web site.

Even if it isn't the Next Big Thing, it will take time for that to be evident.

There be a period during which they can still sell people their dreams.

The answer depends on a number of definitions.

Most references will tell you the answer is Pittsburgh, where KDKA is located.

KDKA argues that it was the first station to take out a license for the specific purpose of broadcasting.  Other stations used experimental licenses to engage in broadcasting before KDKA's appearance - the stations now known as WWJ (Detroit), WHA (Madison, Wis.), and KCBS (San Francisco, originally KQW San Jose) are often cited.

There were radio stations for other purposes before any of these broadcast stations came along.  Hams; stations on ships (and the shore

```
stations that communicated with them); military stations; and scientific
experimenters all predated broadcasting.  It has been suggested Nathan
B. Stubblefield of Murray, Kentucky was the first to experiment with
radio in the U.S..  I would by no means rule out the possibility someone
beat Stubblefield to it though.  Since licenses weren't required until
1912 (and occasionally not bothered with even after that date) records
are incomplete.

What has happened to the FCC interference protection standards, though?
I am regularly seeing appliances for sale which can't even come close to
meeting the Part 15 requirements for emission.  Now we've got BPL coming
down the pike, on top of all the touch lamps and noisy TV sets.  Is there
anyone at the FCC that cares about MW and HF use at all?

>One of the major BPL suppliers has publicly traded stock.  They've gone

>opportunity for those who are certain BPL is the next big thing!!

I think BPL is a terrible idea, and I say that as someone who holds stock
in several power companies.  But then, I thought VOIP was a terrible idea
also.

Amateur Radio Newsline™ Report 1418   October 15, 2004

Amateur Radio Newsline report number 1418 with a release date of
Friday, October 15, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The FCC acts on B-P-L amd the IEEE readies a standard for Broadband
Over Powerline hardware.  Find out the impact on ham radio on on
Amateur Radio Newsline report number 1418 coming your way right now.

(Billboard Cart Here)

**

THE BPL FIGHT:  THE FCC RELEASES ITS BPL REPORT AND ORDER

The FCC has acted to make Broadband Over Powerline a part of the telecommunications landscape.  Amateur Radio Newsline's Paul Courson, WA3VJB, in Washington and Mark Abramovich, NT3V, in Philadelphia take an in depth look at the FCC decision and its impact on Amateur Radio:

-

FCC Michael  Powell:  "Would all members in favor of the item signify by saying aye? All those opposed?  The item is adopted, thank you very much (sound of gavel banging down)"

--

(WA3VJB report) Although several took note of interference concerns, none of the Commissioners voted against the proposal, and only one Commissioner voted any dissent at all. His issue was thet utility companies might improperly try to raise your light bill to help pay for BPL. The measure passed, and BPL can now be built and marketed to real customers nationwide.

The system thet's been in the prototype stage for a while now uses the power lines as a way to transmit and receive telemetry with computers such as those used in the home.  In sending that data over the wiring in a house or on the poles outside, small amounts of signal radiate and can cause interference to users of the same frequencies BPL uses on the power grid.

The ham radio community, led by the research of ARRL laboratory manager Ed Hare W1RFI, documented the potential for electrical noise during this prototype and testing phase. The League submitted what many consider alarming findings to the FCC as a protest and challenge to the BPL proposal on ham radio's behalf.

FCC Commissioner Michael Copp addressed that point before he voted to approve:

--

FCC Commissioner Michael Copp:  "I remain concerned with the question of interference to amateur radio users. I take the concerns of this community very seriously, and I believe the FCC has an obligation to work hard to monitor, investigate and take quick action to resolve harmful interference. "

--

When Copp voted approval, his dissent focused only on whether there were safeguards to keep utilities from using electricity revenue to help pay for BPL.

The proposal from FCC technical staff calls for interference mitigation procedures, including an online public database to help identify by zip code where BPL might be a source of interference, The database also will name a contact person at the company running the system in that zip code, to negotiate and resolve complaints.

Commissioner Copp said he hopes the processs will be quick:

--

FCC Commissioner Michael Copp: "If an amateur radio user makes a complaint, and an agreement between the BPL provider and the amateur radio user cannot be reached, the FCC should step in and resolve the matter. These cases must not take years to resolve. I hope we'll have some really effective rapid-turnaround procedures here in place..."

--

FCC Chairman Michael Powell has been an early flag-waver for BPL, and spent time leading up to the vote praising its potential as a competitive force against existing high-speed data distribution systems. The noise made by those concerned about BPL noise must have reached the top desk, because Powell took time to acknowledge BPL's potential negative impact, although he never said the word interference in his remarks:

--

FCC Chairman Michael Powell: There are users of spectrum that are affected by this. We've taken that seriously from the very beginning. I want to particularly say to all those wonderful amateur radio operators out there. They're still an important resource to the American communications landscape. They're ones that we continue to care about, continue to want to foster and prosper. And we have taken great care to ensure that the protections in this item are necessary to allow that service to continue. We will continue to be vigilant about it, and put the tools in place for that.

--

But then Powell returned to his celebration that BPL would soon provide another way to bring high-speed data to the masses, citing advantages for homeland security, the reliability of the nation's power grid, and the U.S place in the world.

--

FCC Chairman Michael Powell: "Let me underscore that the potential
for America, and the American economy is too great too enormous, too potentially groundbreaking to sit idly by and allow any claim, or any possible speculative fear keep us from continuing to drive this technology drive America into the broadband future."

--

For reaction to the FCC's approval of Broadband over Power Lines, we turn to Mark Abramowicz, NT3V:

--

(NT3V report) For the American Radio Relay League, the FCC's decision in the BPL proceeding wasn't a surprise.

The ARRL's leader says now, more than ever, amateur radio operators will have to be vigilant about any BPL interference that appears and be prepared to act with a complaint that could go all the way to the FCC.

ARRL president Jim Haynie W5JBP says there were some encouraging comments from commission members about the value of the Amateur Radio service. And, for the first time, an admission from the panel that BPL technology is far from perfect.

--

Jim Haynie, W5JBP: "You go back a year, a year and a half ago, there was all this talk about: What interference? There is no interference," Haynie recalled. "And fully half of the meeting was how to deal with the interference issue.

"So the commission now has finally realized that what we've been saying all along does exist and I'm sure the N-T-I-A had a lot to do with that, too."

--

Haynie says among the restrictions the FCC placed on the BPL providers is establishing a database of utility and system operators who will be accountable for neighborhood interference complaints.

He says it appears that provision may have come out of the ARRL's direct lobbying of commissioners.

--

Jim Haynie, W5JBP:  "We've actually had personal meetings with a number of the commissioners," Haynie says. "And Commissioner (Michael) Copps is one of them. Kevin Martin was another. Ms. (Kathleen) Adelstein was another one.

"And these were all held in the past couple of months so it's fresh on their mind. They know where we're coming from. That's what the league has been doing on a direct basis rather than just file a written petition or comments, which we did."

--

Haynie also credited the direct lobbying efforts aimed at members of Congress - many of whom look favorably on the Amateur Radio service.

--

Jim Haynie, W2JBP:  "They've made their feelings known to the commission and while they support inexpensive broadband for America, you know, on the other hand they understand the infrastructure that's involved with Amateur Radio and public safety," Haynie says.

--

Finally, while Haynie says he'll reserve additional comment until reading the full FCC document, he feels some sense of relief at what finally emerged.

--

Jim Haynie, W5JBP: "I know there's some detractors out there that for whatever reason think the league probably lost and sold them down the river. And that's not the case at all," Haynie says. "When we look at what happened at the commission meeting and actually read the details of the report and order, I think what the league has been doing for the last couple of three years will be quite evident.

"So I think we did a good job. Did we get what we want, no - not entirely. But we also knew going in that you can't just say: 'I don't want BPL at all.' It's going to be done in some form or fashion, now the only question is how much?"

--

Over at CQ Magazine, Editor Rich Moseson, W2VU, is feverishly studying what the FCC has done and what impact it will have on Amateur Radio.

He tells me the FCC's press release on the subject seems to contradict the commissioners' assurances that interference mitigation should be done in a timely fashion.

Moseson notes that in the same sentence such resolution of interference problems would be done without disruptions of service to BPL subscribers.

--

Rich Moseson, W2VU: "So, in other words, the users of this non-licensed service have priority over licensed users," Moseson says. "This is what we were afraid of to begin with."

--

Moseson says he's also concerned about the closing comments of FCC Chairman Michael Powell that were not included in the public statement released on the commission's website.

--

Rich Moseson, W2VU: "He starts out practically pandering to hams and then turns around and tells us not to stand in the way of progress," Moseson says.

--

While sounding pessimistic, Moseson says we'll have to wait and see what's in the actual FCC report and order.

With my colleague, Paul Courson in Washington, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

By the way, you'll find the audio comments made by some of the commissioners as a Web Extra feature. You can find them by pointing the browser on your computer to our website, www-dot-arnewsline-dot org. (ARNewsline (tm))

THE BPL FIGHT: IEEE READIES BPL STANDARD

The Institute of Electrical and Electronics and Engineers -- thats the IEEE -- it has begun to develop standard 1675 for Broadband Over Powerline hardware.

According to immformation at the organizations website, the scope of this standard will be to provide Utilities and Manufacturers standards for the commonly used hardware for BPL installations. Also to provide standard installation, maintenance and operation methods to ensure the safety of both Utility and Non-utility personnel working on BPL equipment.

This project will not cover data transmission, protocols, or other aspects of BPL related to the internal workings of this technology. More information is on-line at http://grouper.ieee.org/groups/bop/ (IEEE)

**

THE BPL FIGHT: HAMS AND CB'ERS UNITE - DOWN UNDER

Still with Broadband Over Powerline issues, word that ACREM, the Australian Citizens Radio Emergency Monitors, have joined the fight against B-P-L. WIA Newsman Martin Howells, VK2UMJ, reports:

--

Following reports that the ACA may be considering the removal of interference protection for some HF radio users, ACREM New South Wales forwarded an official written protest to the ACA, the Minister for Communications, the Shadow Minister for Communications, and the leaders of both major political parties.

This was followed up with a further submission lodged by e-mail outlining the Japanese report that showed interference from BPL as high as 300 MHz. Although ACREM is primarily a CB emergency monitoring group, the interests of all radiocommunications users, including amateur operators, is also a concern especially given the potential safety-of-life issues of widespread interference to HF and VHF frequencies. ACREM New South Wales will continue to play an active role in the BPL fight, alongside the WIA and other groups.

This has been Martin Howells, VK2UMJ, for WIA National News.

--

Asn B-P-L looms in more and more places, users of many radio services are banding together to fight it. The joint efforts of hams and CB'ers in Australia is just one example of what's happening, worldwide. (WIA News)

**

ENFORCEMENT: $10,000 FINE AGAINST JACK GERRITSEN, Ex-KG6IRO, AFFIRMED

The FCC has affirmed its earlier tentative fine of $10,000 against unlicensed Los Angeles area radio operator Jack Gerritsen, the former KG6IRO. This for operating radio transmitting gear after the agency set aside his license.

As previously reported, on June 15th of this year the Commission's Los Angeles Field Office issued a Notice of Apparent Liability for Forfeiture to Gerritsen in the amount of ten thousand dollars. This, for Gerritsen's apparent, willfull and repeated violating of Section
301 of the Communications Act by operating a radio station in the Amateur Radio Service without authorization from the Commission to do so.

Gerritsen sent in a response to the notice on July 13th. In his filing Gerritsen claimed that he has a valid amateur license that permits him to operate on all of the radio frequencies detailed in the Notice of Apparent Liability and that that the FCC's earlier action to set aside of his amateur license and KG6IRO call sign was unfounded. He also claimed the set aside did not prohibit him from transmitting on the amateur radio bands given his claim that his amateur license was valid. Also, that any possible suspension of his license is also pending a hearing before an Administrative Law Judge and that it makes the Notice of Apparent Liability moot until any suspension occurs.

Well that might be Gerritsens interpertation of the FCC's decision
but its not shared by the agency. In affirming its decision to require him to pay the ten thousand dollar fine the FCC says that Gerritsen has no license. Just a pending application. Therefore there is no license for the Commission to suspend that the correspondence sent to Gerritsen from the FCC informed him that his

amateur license had been set aside.  As such the FCC did not grant him an Amateur license nor any authorization to use the amateur frequencies.

In closing, it found that Gerritsen is fully liable for a monetary forfeiture of in the amount of ten thousand dollars.  It gave him 30 days fropm the October 5th release of its decision to pay. If he fails to do this in thr alloted or the FCC says it may be referred to the Department of Justice for collection.  The full story is on line at   http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-04-3183A1.doc  (FCC)

**

ENFORCEMENT:  TO MANY CALL SIGN CHANGES

The FCC wants to know why a California couple has been requesting and then cancelling call signs.  The agency's Daryl Duckworth, NN0W, explains:

--

Duckworth:  "NN6AA, Edward Beluso, of Redding, California, has been
asked to provide information on about a dozen licenses that have been granted and canceled since June of 1999.  These filings raise questions as to whether these are being filed in order to block future assignments of the call signs and the legitimacy of those that were issued for clubs.
At the same address, WA6JAN, Janet Beluso, has also been asked to supply information regarding five call signs."
This is Daryl Duckworth, NN0W, reporting."

--

The FCC gave the Beluso's the usual amount of time to respond. (FCC, RAIN)

RESCUE RADIO:  KKOB TOWER HIT BY HOT AOR BALLOON

KKOB-AM radio in Albuquerque, New Mexico, had to shut down its 50,000-watt transmitter for several hours on Sunday, October 10th.  This, after a hot air balloon got tangeled at the top of the stations 700 foot high broadcast tower.  Amateur Radio Newsline's Norm Seeley, KI7UP, has more:

--

According to news reports, Bill Chapel was flying the hot-air balloon when it blew into the tower near a park where the Albuquerque International Balloon Fiesta was being held.  The lines supporting the airships canopy got wrapped  around the triangular shaped tower. This left the gondola resting up against the antenna structure with the straps securing it to the balloon tangled in the antenna structure.

Chapel, and passengers Aaron Whitacre, 10, and Troy Wells, 14, successfully got out of the gondola and onto the tower.  They then began the long climb down the antenna structures ladder.

At the 100 foot level they were met by a group of trained rescue worker.  The rescue team secured the trip with safety gear, and helped them into a utility truck bucket for the last of the trip back to mother Earth.  Tower maintenance crews then got to work removing the remainder of the balloon from the antenna structure.

Nobody was hurt in the incident and the station resumed normal operation once the remnants of the balloon were removed.

For the Amateur Radio Newsline, Norm Seeley, KI7UP, in Scottsdale, Arizona.

--

The Federal Aviation Administration and National Transportation Safety Board are reportedly investigating the incident. The Albuquerque International Balloon Fiesta has been flying since 1972. (Published news reports)

## RESCUE RADIO: WAYS TO WARN

Scott Marks, KI4GGU, says via the WIA News that Israel has developed an emergency public notification system called Silent Radio. This is a regular FM station that remains silent until some kind of emergency situation takes place. Once it receives an alert, it takes to the air to issue any required information to the Israeli public which already knows where to tune in. Kind of the the old Emergency Broadcast System we had here in the U-S-A before the 1990's upgrade
to E-A-S that is supposed to warn a lot more people but is also requires special decoding equipment and is very complex. (WIA News)

**

## RESCUE RADIO: WAY NOT TO WARN

Meantime, over in the U-K, Bob Sayers, G8IYK says the Emergency Planning community in the that nation has tried to have something like the Israeli alert system established for many years. Unfortunately, they always get the same response from government officials ewho say that it would be prohibitively expensive.

In fact not so long ago the nation-wide warning siren network, set up in World War 2 but retained and improved upon throughout the Cold War period, was scrapped. The reason was the same. No money to maintain it. (WIA News)

## ON THE WEB:  NO MORE FREE E-MAIL OFF-LINE CLIENT RIDE

If you are a user of Juno's no-charge e-mail service, part of your free ride is coming to an end.  This as the Internet service provider announces that as of  December 1st free members will be required to use webmail to get and send e-mail.  In other words you will need a web accoumt someplace else to use Juno e-mail.

This change only affects Juno Free members who currently download e-mail to their computer using Juno software, Outlook Express or other "offline" e-mail clients.  These changes to Juno e-mail will not affect Juno SpeedBand, Platinum, or MegaMail members or Juno Free members who already read and write Juno e-mail exclusively on the Web.

According to a release from the company, to continue being able to use an off-line client with Juno e-mail current free members will need to upgrade to one of Juno's premium services.  More information is on line at www.juno.com/emaildiscount.  E mail discount is spelled as one word.  (Juno press release)

**

## THE SOCIAL SCENE:  PACIFICON IN OCTOBER

Turning to the ham radio social calander, Pacificon, the 13th annual ARRL Pacific Division Convention is happening as this newscast goes to air.  The venue is The Mariott Hotel in San Ramon California.  Those attending will probably get a first hand report on the FCC decision on B-P-L that took place on Thursday the 14th.  (Worldradio)

**

## THE SOCIAL SCENE:  MICHIGAN IN NOVEMBER

And Michigan's Holland Area Amateur Radio Club is hosting the State ARRL Convention again this year.  The date is Saturday November 6th.  Talk in will be on the K8DAA 147.060 Mhz repeater that requires CTCSS access tone of 94.8 Hz  (E-mail)

## RADIO HEALTH REDUX: IS THERE A CANCER CONNECTION TO HIGH POWER RADIO TRANSMISSIONS

A follow up to last weeks story on the risks associated to R-F exposure from living near a high power broadcast station. Bob Gonsett, W6VR, points a report in his C-G-C Communicator that discused the same subject. Amateur Radio Newslie's Bruce Tennant, K6PZW, reports:

--

Two years ago an Italian study found death rates from leukemia increased dramatically for residents living within two miles of Vatican Radio's powerful array of transmitters in Rome. Now, as reported last week, Wired Magazine says that Korean researchers have looked at the death rates in 10 regions with AM radio transmitting towers broadcasting at more than 100 kilowatts. They compared them with control areas without transmitters, and claim to have found substantially higher cancer mortality rates among those who lived within two kilometers of the high power transmitters.

But says the CGC Communicator, the problem with the Vatican study is that it was relatively small in the size and lacked exposure data. Also, the new Korean study has not even been published. As a result, this is all speculative and based on some rather sketchy pre release information.

Clouding the picture is the statement of Epidemiologist Mary McBride of the British Columbia Cancer Agency also reported in Wired magazine. It quotes Mc Bride as saying that there have been many studies like these, and they just are not very convincing.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

The bottom line to all this. Its going to take more than just scientific speculation to know foe certain if there is any affect at all from living close a a high power broadcast transmitter. (CGC)

NAMES IN THE NEWS: AMSAT ELECTIONS RESULTS ANNOUNCED

Some new names and some old will be running AMSAT North America the next year. This, with word that Rick Hambly, W2GPS, has been elected President of the Amateur Radio space authority at the organizations October 7th Board of Directors meeting.

Hambly replaces Robin Haighton, VE3FRH, who has headed up AMSAT North Ameriuca the last seveal years. Also elected or re-elected are are Lee McLamb, KU4OS as Executive Vice President, Mike Kingery, KE4AZN as Vice President Operations, Stan Wood, WA4FNY taking the task of Vice President of Engineering, Barry Baines, WD4ASW as Vice President Marketing and User Services, and Frank Bauer, KA3HDO as Vice President Human Sapceflight. Gunther Meise, W8GSM, will be taking the Treasurers spot for the coming year as well.

Also at the meeting status reviews were presented of several undertakings. These including ongoing projects such as the Echo satellite and the launch of future hamsats including Eagle. The Board also had continuing discussions on regulatory matters, most importantly the impact of FCC Report and Order 04-130 which deals with the subject of Orbital Debris. (ANS)

**

RADIO IN SPACE: MESABA THE IRANIAN SATELLITE

SpaceDaily reports that Iran intends to launch its first satellite in April 2005. The bird named Mesbah is said to be a tewenty in square cube weighing in at 132 pounds.

Plans are to put it int a Low Earth Orbit at about about 560 miles. The satellite will be used to identify natural resources, control the nations electrical and energy network and can also be used by communications and crisis management teams the press reports said. (ANS)

**

WORLDBEAT: SA HAMS DID NOT LOOSE 2.4 OR 5.6 GHZ

South African Amateurs have not lost access to either the 2.4 and 5.6 GHz band. Its just a government typo. At least thats what South Africa Radio League president, Graham Hartlett, ZS6GJH, is saying ane he should know. Thats because he set out to investigate why both pieces of spectrum were not listed to that nations ham radio community.

Now Harlett says that he has in hand a communication from the nations radio regulatory body. It tells him that the 3.4 and 5.6 GHz allocations for amateurs had been accidentally omitted from the last publication of the band plan in the Government Gazette. Harlett was assured that this will be rectified in the next band plan publication. (WIA News)

**

SPECIAL EVENTS: K0AIR/K0GRL TO CELEBRATE VETERANS DAY

To recognize Veterans Day and the birthday of the legandary General Curtis E. LeMay, the Strategic Air Command Memorial Amateur Radio Club will be operating K0AIR and K0GRL on Thursday, November 11th. The stations will be on the ait 1200 to 2400 hours UTC in the general phone bands on or near to the following frequencies ending in 47. Thhis 3.947, 7.247, 14.247, 21.347, and 28.347 Mhz depending on propagation and time of day. Six and two meters will also be activated 51.47 and 146.46 Mhz. For QSL information please visit www.sacmarc.org on the World-Wide-Web.

**

DX

In D-X, word that a group of seven German operators is active from the Chesterfield Islands for eight days beginning about the 16th of October depending on weather conditions in the area. The Chesterfield Islands are located between Australia and New Caledonia. Once on the air, activity will be on 160 to 6 metres using CW, SSB and RTTY. The callsign will not be announced before operations start. QSL as directed on the air. (OPDX)

And YT1CS is active portable 5Z4 from Kenya until 18th of November. He orks only SSB on 20 and 15 metres. Previously he was signing the rather convoluted call of 5Z4YT1CS until the Kenyan licensing authority re-inserted the 'stroke' mark in the callsign. (RSGB)

Lastly, seven operators from Germany and Poland are active as TJ3SP and TJ3FR through October 20th. They have four stations on all bands and modes, except 160 and 6 meters. These two bands are not licensed for use in Cameroon. (OPDX)

**

THAT FINAL ITEM: THE HISTORY OF JOTA

And finally this week, its the time of year for Jota -- the scouts annual ham radio Jamboree on the Air. Last week we told you about the event as it is today. Now we take a look back in time to the beginning of the Jamboree with John Williams, VK2BUI.

--

Jamboree On The Air is the largest annual international event in the Guides and Scouts event calendar, when thousands of Girl Guides and Scouts from all over the world gather for a weekend to contact each other by radio, share ideas, participate in many activities, make friends and learn new skills.

Like a lot of successful ventures, JOTA had a small beginning, and whilst Scouting utilised radio in its program in some areas for a number of years, it was not accepted as an official part of the Scout program until the 1957 Jubilee Jamboree at Sutton Park Coldfield, near Birmingham in the United Kingdom.

It was here that a very successful amateur radio station was set up, but amongst the sixty plus operators present, only two were in uniform, one of whom Mr Les Mitchell G3BHK.

As this was the only activity at the Jamboree not conducted with a full Scouting Staff he was rather disappointed, feeling that in the true spirit of such a wonderful international Scout activity all Scouters should have been involved in the manning and operation of this station.

His concern led him to call a meeting of overseas Scout radio

Amateurs present at the Jamboree and during one of their meetings
they decided to keep in touch with each other on air and ensure their
availability, if possible, as station operators at future World
Jamborees.

Initially one day a year was proposed, but thinking this over later
Their nominated Organiser Les Mitchell suggested they consider
inviting amateur radio operators throughout the world to join them
instead in a special weekend each year for a Jamboree on the Air at
which, hopefully, Scouts and leaders would be able to talk to each
other throughout the world

```

swissinfo  October 18, 2004

"For almost 70 years, shortwave has played a fundamental role in making the reality and the aspirations of Switzerland known to the world," said Nicolas Lombard, the director of SRI.

The Swiss Shortwave Service - as SRI was first known - started broadcasting in 1935.

One of the first shortwave radio stations of its kind, it was aimed at the Swiss living abroad who wanted to keep abreast of news and current affairs back home. Broadcasts in English began six years later in 1941.

"SRI really represented an umbilical cord for our countrymen and women abroad, and for many years they didn't have any other means of getting information about Switzerland," said Giovanni Conti, executive director of Swisscom Broadcast, which provided the technical support for shortwave broadcasting.

The rise of fascism in neighbouring countries was another factor that spurred the creation of SRI, whose mandate also included transmitting the country's national identity and federal principles abroad.

During the Second World War, the station developed its long-standing identity as a neutral voice during periods of international conflict.

But SRI really came to the fore during the Cold War, when shortwave listeners around the world tuned in for unbiased coverage of global events.

By this time, the station was broadcasting in eight languages and was receiving up to 130,000 letters from listeners a year - from all over the world.

"During this period of propaganda, Switzerland's neutrality certainly helped the success of SRI," said Lombard, who joined the service in 1965.

It is estimated that SRI had an international audience of between five and ten million people during this time.

In 1972, SRI - prompted by a move towards more powerful transmitting capabilities - inaugurated the Sottens transmitter near Lausanne.

At 500 kilowatts, it was ten times more powerful than its predecessor at Schwarzenburg outside the capital, Bern, which dated from 1938.

But the 1980s saw the beginning of the decline of shortwave. The fall of the Berlin Wall left SRI executives wondering how they could adapt the station's neutral mandate to a new era of global entente.

Added to this was the advent of new technologies such as FM and satellites, which gradually started to replace shortwave.

During the 1990s, SRI also began the process of transforming itself from shortwave broadcaster to multimedia internet outlet.

But it was the government's decision to cut funding to SRI that proved the final blow for shortwave radio.

However, Conti sees the passing of radio as a transition rather than the end of an era.

"If one shuts off an old technology like shortwave, another one comes in its place like digital," he said.

"We must maintain a qualitative level of old technologies as long as possible, without, however, missing the boat on the new ones," added Corti.

Lombard agrees that new technology is the way forward.

"The internet cannot replace what was on offer on shortwave," he said. "But it offers new and great possibilities for multimedia communication, which until now one couldn't possibly imagine."

swissinfo, Armando Mombelli

Key Facts

-1935: Swiss Shortwave Service created.
-1939: First shortwave transmitter for the service at Schwarzenburg.
-1972: Sottens transmitter opened.
-1978: Service renamed Swiss Radio International.
-2004: Sottens transmitter closes, ending shortwave era.

With radio programmes in eight languages, SRI reached an estimated five to ten million listeners worldwide during the Cold War.

By the end of the 1990s, shortwave was in decline and SRI decided to abandon shortwave radio broadcasting.

swissinfo/SRI now concentrates exclusively on its multimedia website, www.swissinfo.org.

Tue 19 October, 2004 11:34
By Adam Pasick, UK media correspondent

LONDON (Reuters) - The BBC has helped drive the take-up of digital radio but should consider making programmes from its vast radio archives available to private sector companies, a government commission says.

Tuesday's report on the publicly funded broadcaster's five digital channels -- 1Xtra, BBC Asian Network, 6 Music, BBC7 and Five Live Sports Extra -- comes less than a week after a separate government-commissioned report criticised the BBC's digital television channels for providing poor value for money.

The digital radio report from former Channel Four executive Tim Gardam comes as parliament reviews the BBC's governing charter. At a time when the BBC's independence from government oversight is in doubt, Gardam also warned that "the lack of any formal relationship between the BBC governors and (media regulator) Ofcom ... is a problem."

Gardam recommended that commercial radio companies be able to buy programmes from the BBC Radio archive, and that the BBC should consider a joint venture with the commercial sector for archival programming in the future.

The country is moving toward all-digital formats for television and radio, which enable a wider selection of stations and free up valuable broadcast spectrum for other uses. More than half of households have made the switch to digital TV, but the public has been slower to buy digital radios, which are only beginning to be sold at attractive prices.

The BBC's digital radio stations have been "instrumental in driving digital take-up" thus far, Gardam said in his report. "As the market develops it will be necessary for the BBC's services to be more carefully described if their distinctiveness is to be ensured."

-- Black music station 1Xtra "has established a credibility and reputation with a young Black audience where the BBC had little before." But he cautioned that because it concentrates on the "urban" music genre, it is not completely fulfilling its remit to bring together the diversity of Black music and culture across the UK, and "does not do much to serve older Afro-Caribbean or African audiences."

-- BBC Asian Network has produced "considerable added value" with programmes like its "innovative" soap drama "Silver Street."

-- Alternative music channel 6 Music represents the BBC's "creative enthusiasm at its most impressive."

-- Sports broadcaster Five Live produces "extra value for money" by broadcasting more hours of coverage from events for which the BBC owns rights.

-- BBC 7 has "reinvented children's radio as a multi-media proposition" but has had a "significant market impact," playing a role in the failure of its commercial counterpart, Oneworld.

Being a Houston Astros fan I was surprised on a trip to New England last week that only two radio stations carried the NLCS games.  I got one (can't remember calls or frequency) during late afternoon around Portland Maine.  After 5:30pm or so, I listened on WHAM Rochester NY. That signal did good from near the Maine-new Hampshire border down to Boston.

Most references, and the industry itself, has designated KDKA as the first radio broadcaster. This is in part due to your note that KDKA's management was the first
to have deliberately intended to broadcast to the surrounding population (in fact,
KDKA's first general manager, whose name I've forgotten, is considered to have coined
the word "broadcast"). I'll admit that I'm biased - I used to work for the old girl.
But while the industry designates KDKA as the first, they also do recognise the other
pioneers who showed Westinghouse Electric that broadcasting was a viable industry,
since they were, accidently or otherwise, also broadcasting to their own regions.

Stubblefield, I hold, wasn't using "radio" per se.  He was using the electromagetic
spectrum, unmodulated, more as an induced audio-range EM field...I'll give him that.
Because of the nature of his method, it would never have been practical, even if one
were to have unlimited amounts of power, since only one such transmitter would be
possible in any given area (with more than one, the overlapping audio-rate EM fields
would be worse than the co-channel interference AM radio has today).

:
: What has happened to the FCC interference protection standards, though?
: I am regularly seeing appliances for sale which can't even come close to
: meeting the Part 15 requirements for emission.  Now we've got BPL coming
: down the pike, on top of all the touch lamps and noisy TV sets.  Is there
: anyone at the FCC that cares about MW and HF use at all?

a bigger question should be what has happened to the FCC period (hint: michael powell is no help). AM and FM interference "standards" went out with the fairness doctrine. both bands have been totally ghettoized. fits in nicely with the crud channel corporate sound of slop. no standards on the technical side and no standards on the programming side. no wonder listenership is down....

```

On Monday October 18, VRT Radio told staff at RVi, its international service that all shortwave transmissions of programmes in English, French and German would be discontinued. The only shortwave activity that will survive is the transmission of 4 hours per day of programmes in Dutch, most of it relays of domestic VRT stations, and only beamed to south Europe.

According to the management, last transmissions of programmes in English, French and German would be on last day of winter schedule: March 26 2005

More information this Sunday in "Radio World", my feature in "Flanders Today".

Does BPL mean that I can just pack up my equipment? Or is it going to
be such a loser than I can ignore it?
I live a half mile east of a large power substation with high voltage
lines running north. Depending on the weather, I already have
occasional interference on all types of wireless reception and
transmission.

Would satellite or digital radio be better to avoid the interference?

Thanks for all your helpful information on this thread!

One radio = one subscription. If you get another radio, you can put it on
XM's "family plan" for $6.99/month.

# RadioLovers.com Collects Shows Where Copyrights Have Expired

October 19, 2004

Before the days of video games, MTV and the Internet, families used to gather around the radio to listen to old radio shows.

But when the era of television arrived, many of those old radio shows went off the air.

Now you can hear all those great old radio programs again on RadioLovers.com. The site collects hundreds of old-time radio broadcasts that date so far back that many of their copyrights have expired.

Because of that, you can listen to the old programs as often as you like without paying anyone a cent.

The list of shows available is long. There are the old comedies such as the "Abbott and Costello" show and their infamous "Who's on First?" routine. "Amos and Andy" broadcasts featured here date back to 1928.

There are also dramas such as "The Avenger" and westerns such as "Hopalong Cassidy," "Gene Autry" and "Death Valley Days."

Even "Batman" was around way back then.

These vintage radio programs are great for any nostalgic grandmother or grandfather who may want to take a step back in time, but also something that may be fun to introduce to the young ones to show the visually stimulated generation what the theater of the mind was all about.

The site is growing and shows are continually being added, but only American broadcasts are available. Fans of the British "Hitchhikers Guide to the Galaxy" radio series, for example, will have to go elsewhere.

October 19, 2004

By Angela Quintal

The Department of Communications appears to have given up on selling Capital Radio to recoup the costs involved in its closure in 1996.

In its annual report, it says it wants the cabinet to write off an estimated R3.67 million.

Capital Radio, based in the Transkei homeland from 1979 and broadcast on the 604 medium wave band that became its catchphrase, was an institution during the latter years of apartheid, with the government repeatedly trying to shut it down.

Until the advent of Radio 702, it was the only commercial radio station in South Africa.

Three attempts to sell it in the past five years have failed.

You're right.  Interference requirements seem to have to become a dead issue
in the last 10 or 15 years.  It would be asking alot of the FCC to have them
start caring now.

>Now we've got BPL coming
> down the pike, on top of all the touch lamps and noisy TV sets.  Is there

Are any of those power companies considering BPL?  I'd worry about the
company pissing away cash on a goofy idea.

In Spain there are at least 2,279 illegal broadcasting stations in
operation, double the number of authorized private stations, and some even
pretend to be part of an authentic network, according to a report given to
the Ministry of Industry by the Spanish Association of Commercial Radio
(AERC).

The secretary of the AERC, Alfonso Ruiz de Ass�n, says that ten years ago there were approximately 300 pirates, but an explosion of individual stations and the formation of radio networks has contributed to this rapid expansion. In addition, the AERC reports that there are 124 municipal transmitters with administrative concessions that involve some type of irregularity, and 504 stations that fail to fulfill the law, either because they are not exploited by the city councils, or because they broadcast in networks, or are connected to private commercial networks.

The existence of these broadcasting organizations, says Ruiz de Ass�n, produces interference, spoils the quality of reception and does economic damage to the licensed stations. The report will be sent to the presidents of the autonomous communities and to the competent authorities in the matter, with the details of illegal transmitters and irregularities detected in each region.

The Association has registered 482 illegal transmitters in the Canary Islands; 387 in Andalusia; 318 in Valencia; 183 in Catalonia; 144 in Madrid; 143 in the Basque Country; 106 in Murcia; 103 in Galicia; 73 in Arag�n; 69 in Cantabria; 68 in Castile and Leon; 67 in Castilla-La Mancha; 40 in the Balearics; 40 in Asturias; 27 in Extremadira; 25 in Navarre and 4 in Rioja. Only Ceuta and Melilla are clear of illegalities, points out the report, which says the present situation is one of anarchy. It demands of the authorities urgent action to restore the application of the law in an activity "as meticulously regulated as is the radio".

According to the secretary of the Spanish Association of Commercial Radio, the ideal way to end the illegal stations would be joint action by the independent, competent communities and the central Administration.

>(in fact, KDKA's first general manager, whose name I've forgotten, is considered to have coined the word "broadcast")<

That would be a neat trick, seeing as how one cannot coin a word that already exists.  The term "broadcast" came from agriculture.

The fairness doctrine is interference. It was used as a political club. Richard Nixon and the Republican party were using the so-called fairness doctrine to go after the licenses of radio and TV properties of networks and newspapers they didn't like. But Nixon didn't invent the tactic. It was first used in the Kennedy administration. Given today's political climate,I'm sure both parties would enthusiastically hammer the media companies whenever embarrassing stories got out.

Is that really what you want?

There's a mistaken belief that dropping the fairness doctrine made right wing political talk radio possible. That's not true. In Chicago, Howard Miller had a greatly entertaining political talk show back in the early seventies. Miller was to the right of Limbaugh, Hannity and Atilla the Hun.

Let's also consider who else gets treated shabbily by the fairness doctrine. Who should determine what the audience should hear -- the government or the audience?

Frank Dresser

That's sad to hear.... I enjoy listening to their transmission via Bonaire
around 0400 UTC (midnight local) before going to sleep. Strong, clear signal
with quality programming.

Perhaps it's available via the web, but I won't listen that way since I
don't have a computer in my bedroom.

Oh well, so long RVI.... and thanks for the QSL last week :)

I won't go into rehashing the controversy revolving around this issue....if you don't
know about it, you've been under a rock.  But...

Heard on CBC (CBC's The Current, which was simulcast on the 275 or so Pacifica
stations as part of a joint effort with Democracy Now.org) on 15 October
(http://www.cbc.ca/thecurrent/2004/200410/20041015.html).

Cliff Kincaid (Accuracy in the Media) claims that a Kerry campaign spokesman warned
that "they'd better hope that we don't win."  It's interesting to note that most
every reference to this quote comes from right-wing nutjob websites, who obviously
feel that free speech includes the right to use irresponsible, biased and sometimes
slanderous speech, and that Sinclair, in the execution of its First Amendment right,
can violate federal election law by promoting a candidate on their stations.

Well, we'll see.  This may just be the straw that broke the camel's back, and if
Kerry wins, these folks may find a new, and more all-encompassing, Fairness Doctrine
returned to broadcasting.  You right-wingers may have just gotten exactly the thing
you can't stand, as a result of your encouragement of irresponsible use of the public
trust to validate only those concepts you already believe.  Shame, really.  Blame
Hyman.  Now you may end up having to hear the other side of the story more often.
Not that that's a restriction in your freedom of speech, and therefore NOT
censorship.  Censorship is a limit on what can be said.  A re-imposed Fairness
Doctrine would only mandate what must be said as well.  Think about what you might
learn about, now!

(And we've already handled that broadcasting does not have full First Amendment
protections.  So don't bother.)

Sat, Oct. 09, 2004
Associated Press
Morganfield, Kentucky

A runaway boom truck caused-WMSK's tower to collapse, knocking the AM and FM radio station off the air.

A utility company boom truck had been left at a repair shop on a hill over looking the station during the day Thursday, said Don Sheridan, the station's program director. A brake that was set on the truck apparently failed.

Sheridan said the truck rolled down the hill around 10:30 a.m. CDT, and broke some of the tower's support cables, causing it to fall.

"It's just spread all over the field out there," he said.

An announcer on duty at the FM portion of the station didn't hear the crash as the station was carrying a Major League Baseball game. He learned there was a problem when listeners phoned in, Sheridan said. Both the AM and FM stations were silenced.

The stations got back on the air with low power yesterday, but Sheridan said it will take a month to get a new tower and the antenna that was attached to the tower and get them installed. WMSK is owned by Union Broadcasting Inc.

Historical Journal of Film, Radio and Television, June, 1994 by Martin Doherty

For the greater part of the twentieth century, radio was without question the most powerful means of international communication. Until relatively recently, radio was the only medium with a truly global reach, capable of delivering a message simultaneously into the homes and minds of millions of listeners around the planet. Given its range, it is scarcely surprising that radio was rapidly taken up as a medium for the transmission of political propaganda. This was particularly true in times of international conflict, and during the Second World War, radio played a key role in the propaganda campaigns of both Axis and Allied powers. Radio was used as a transmission mechanism for morale boosting material for domestic consumption; it was also employed as a weapon in the psychological war waged against the enemy...

By Yasmin Assemi

Dixon -- A few miles outside Dixon's core lies the old Voice of America radio station nestled among a web of communication wires.

For more than 40 years, it broadcast in short-wave in 44 different languages to the Far East, Central America, South America's West Coast and Oceania. The typical program was a mix of news, sports, music and cultural information about the U.S. gathered at VOA's headquarters in Washington, D.C.

It was an institution believed in by John Wiswell and Frank Green, the two surviving Dixon residents who worked there.

The station in Dixon and its nationwide counterparts educated people worldwide about America and "let them know what kind of country we were," said Green, a station radio engineer and plant supervisor from 1953 to 1986.

"If (the rest of the world) knew everything about us, we'd be in a better shape than we are now," the 84-year-old said.

It was "kind of a high-pressure job," but Green, a Pearl Harbor survivor, found it interesting work after serving in the Navy during World War II, he said.

"I believe what they were doing was right, and I thought it was pretty wonderful for the government to want them to know what was going on here," Green said.

Wiswell came to Dixon in 1979 and worked for VOA for about a year as a technician. He shares Green's mentality.

"A lot of these foreign countries (didn't know) what Americans were like," Wiswell, 80, said. "It gave the public - the ones who could listen to it - an idea of what (America) was about."

The station hosted contests for listeners and some programs featured announcers who spoke slowly for those who couldn't understand English well.

Russia and other countries often tried to jam programs to prevent people from listening but stopped once the Iron Curtain fell in 1989, Green said.

"It used to be information was not quite as easy to send to bigger countries," Green said. "A lot of countries had their propaganda, but ours was pretty straight."

"They did a lot of good stuff," Wiswell said. "It was not so much propaganda like some of the others. It was factual stuff."

"The main thing was to do the job out there, and if we had problems with the transmitters we had to immediately notify Washington," Green said.

Dixon's station was one of four in California and went on the air under the leadership of NBC in 1944. The government took it over in 1949 and broadcast until the station closed in 1989.

"They wanted a place on the West Coast that was pretty good for transmission (and Dixon was the) ideal spot to have a short-wave transmitting station," Green said.

Voice of America operated under the U.S. Information Agency, which was created in 1942 after Pearl Harbor "to deal with Nazi and Japanese propaganda," VOA spokesperson Joseph O'Connell said.

The Broadcasting Board of Governors operated VOA after the State Department absorbed USIA in 1999. The agency now broadcasts under a charter which requires content to be comprehensive and objective, O'Connell said.

Only two VOA transmitting facilities still broadcast from the U.S. - one in Delano and the other in Greenville, N.C. Wiswell blamed satellites for putting Dixon's station out of business.

"The viewpoint changes from time to time," Green said. "I think now a lot of people feel the United States is very rich and helps out more and if we don't, they don't like us."

State Department officials said there are no records of the government's monetary investment in Dixon's station over the years. A 1977 document obtained by the Daily Republic states the U.S. government had an overall investment of $7 million in the facility.

Green, a matter-of-fact man of few words, gives a good summary of the station's popularity.

"If people like us, they like it," Green said. "If they don't, they don't like it."

People can still listen to VOAs short-wave broadcasts. For more information, visit www.voa.gov.

KKOB-AM, an all-news station in Albuquerque, New Mexico, which operates with 50,000 Watts on 770 kHz, was forced off the air for a time yesterday when a hot air balloon carrying two child passengers became entangled in its 700 feet high transmission tower. The passengers, aged 10 and 14, and 69-year-old pilot Bill Chapel were taking part in the annual Albuquerque International Balloon Fiesta. The three were able to climb down to 100 feet, where they were met by rescue workers with safety gear. The Federal Aviation Administration and National Transportation Safety Board are investigating the incident.

After years of testing and planning, 945 kHz mediumwave from Latvia should finally come alive under the name Radio Nord. A test transmission is planned to run from 0900 UTC on September 24 until 2100 UTC on September 26. Radio Nord will broadcast in Latvian with an oldies format and should be on the air 24 hours a day from October 1, reports Bernd Trutenau on the mwdx mailing list. Trutenau says that the start was delayed by the certification procedures for the 2.7 kW Blyth transmitter.

Earlier (see DXing.info news in December 2002) http://www.dxing.info/news/2002_12.dx#gold  both Radio Caroline) and Radio Gold 945AM  were testing the frequency of 945 kHz, and Radio Gold 945AM was planning to start regular transmissions in early 2003.

Also in October, Trutenau reports that KREBS TV is planning to conduct test transmissions on 576 kHz from Kuldiga in western Latvia with 100 kW of power. This frequency will be made available for leasing to foreign broadcasters.

> have even existed at the time?

As noted earlier, though, KYW has a minima, not a null.  I suspect (although I make no claims to its accuracy) that the protection afforded the southwest (since it's done with two towers in Whitemarsh, PA, which is to the northeast of City Center) required that the maxima be directed towards Philadelphia and, serendipitously, in the other direction towards Reading, Harrisburg and Scranton.  As a result of the minimum towards the southwest, and due to the two-tower design and the need to direct maximum towards Philadelphia, this resulted in a second minimum in the direction of New York.  It was this protection which was already in place that allowed WHN to get their pattern and power.  So KYW isn't really protecting 1050, and thus a 1-B is protecting a II...the antenna design simply fails to provide converage in that direction, but which still required that WHN (or ESPN 1050) protect KYW to the limits required in the rules.

And WINS (that was a mistake, right?) has nothing to do with this....at 1010, it's far enough away from 1060 that neither station figures in the pattern of the other.
Also of note is that WBZ has a directional pattern, but as a 1-A it protects nothing.
It's done with a parasitic element suspended from the guy wires, which pulls in the power which would be wasted over the Atlantic.

By Diane Toroian Keaggy
St. Louis Post-Dispatch

Shock jock Howard Stern fancies himself the "king of all media,' emphasis on the word "all.' Already a star on the FM dial, best-seller list, silver screen and television, Stern announced Wednesday he's taking his act to satellite radio in 2006. The move will free Stern to crack dirty jokes and utter obscenities without fear of reprisal from his nemesis, the Federal Communications Commission.

But more important, observers say, Stern's defection from terrestrial radio may push satellite radio from obscurity to the mainstream.

"After two years of being 'the other,' satellite radio is developing its own content,' said Sean Ross of Edison Media Research, which conducts surveys for a number of media outlets. "This certainly could drive traffic to satellite radio.'

Two competing companies Sirius Satellite Radio based in New York and XM Satellite Radio based in Washington each program more than 100 stations of music, talk and sports, much of it commercial free. XM is the dominant of the two companies, claiming about 2.5 million subscribers. Sirius has 600,000. Both offer coast-to-coast coverage, so a trucker can start his day in Montana and travel to the Midwest without switching stations or losing the signal.

But this technology comes at a cost. XM charges listeners a $10-a-month subscription fee; Sirius costs $13 a month. Most electronic stores can equip a car with a satellite receiver and antenna for $150; a Sirius-ready boom box costs about $100. Neither company has developed a small, Walkman-like receiver.

In terms of content, each company boasts its own unique programs. XM features NASCAR broadcasts, MTV radio and seven country stations. Sirius hosts NFL football, World Radio Network and 15 rock stations. Both air the Weather Channel, BBC World Service, C-SPAN Radio, CNN and Bloomberg Radio.

Until Wednesday, XM had the upper hand in the high-profile- host category. Last week, it debuted "The Bob Edwards Show' starring the revered, former National Public Radio personality. XM also signed Opie and Anthony, the one-time syndicated shock jocks who got booted off the air after they encouraged a couple to have sex in St. Patrick's Cathedral.

Though Edwards and Opie and Anthony certainly enjoy loyal followings, their popularity pales compared to Stern's. Aired in 46 markets, Stern's show dominates morning ratings among young men. In St. Louis, one out of five men ages 18 to 34 tuned into morning radio listen to Stern. John Beck, the Emmis Communications exec who brought Stern to St. Louis six years ago, says the show has boosted revenue and ratings on local affiliate KPNT (105.7 FM). He recognizes that fans love Stern. But do they adore him enough to pay for him?

"He has 126,000 listeners here. How many people are obsessed enough to put in the equipment and spend like $150 a year to hear him on their 20-minute commute to work?' asked Beck. "We in the media often have a false sense of our importance. We think, 'What will these people do if we leave?' Well, they move on.'

Sirius Satellite Radio hopes that 1 million of Stern's national following of 12 million fans need their daily fix of Stern's celebrity interviews, political jabs and off-color satire. That's how many new subscribers the company needs to cover the cost of its five-year, $500 million deal with Stern.

Jenny Miller of the Consumer Electronics Association, a leading trade organization, forecasts Sirius should meet that goal. Even before Stern's announcement, the association's 2004 market-potential study estimated Sirius and XM would attract 5.3 million new subscribers in the next year. Miller said Stern's move would boost consumer awareness not only among his fans, but among average folks who still may be a little cloudy about the medium.

"I think this will get people curious,' said Miller. "With any new technology, content is what drives adoption. After all, why would you buy something if it doesn't offer you something new. This shows satellite has something new to offer.'

by William Nicoll

When you take a call on your cell phone, listen to the radio as you drive down the highway, or tune into satellite television at home, you probably take for granted how those signals are getting to you. It was Arthur C. Clarke who so aptly put it: "Any sufficiently advanced technology is indistinguishable from magic." And if you took for granted the technology behind today's wireless wonders, you never even gave a thought to the policy that lets them exist. Welcome to the exciting world of "spectrum policy," in which our representatives in the U.S. government have been laying down the law for almost 80 years.

Spectrum policy has its origins in the Radio Act of 1927, in which Congress established the the Federal Radio Commission, the first regulatory organization for the airwaves. It wasn't for seven years, however, that more comprehensive rules were passed with the Communications Act of 1934. One of the major results of this act was the creation of the Federal Communications Commission, or FCC.

The FCC, under the auspices of the Communication Act, establishes and supervises policy regarding commercial uses of wired and wireless communications in the United States. Over the years, there have been many amendments to the Federal Communications Act to keep pace with technology, but its spirit remains intact.

Unfortunately, the public has very little knowledge of what the FCC actually does. That is because the nature of spectrum policy is very technical, and the effects of such policy aren't readily seen. When was the last time you cared about at what frequency maritime navigation radio or garage door openers operated? With just a little education, this can be changed. We can start with some basic information about the electromagnetic spectrum.

Most people know that light travels in waves. It turns out that light is only one part of a continuum of electromagnetic phenomena; these phenomena are characterized by their frequency, which is a measure of how many times a wave moves from crest to crest in a constant period of time. The accepted unit of frequency is the Hertz (abbreviated Hz) one cycle per second.

By drawing a line that represents low frequencies on the left and high frequencies on the right, one can set up the electromagnetic spectrum and divide it into parts. From left to right, the common bands of the spectrum are known as: radio, microwave, infrared, visible light, ultraviolet, X-rays, and gamma rays. These many types of waves are all just photons of different wavelengths. Over the years scientists have given bands of the spectrum different names for expedience. It is much easier to say "radio waves" than "500 MHz electromagnetic radiation".

With a basic understanding of electromagnetic waves, spectrum policy becomes a little friendlier. Spectrum policy is primarily concerned with radio and microwaves ranging from 3 kHz to 300 GHz. It is at these frequencies that wireless communication is most viable. For example, you wouldn't want to listen to your favorite rock station on a gamma-ray radio; the sheer energy these high frequencies carry would probably give you radiation poisoning before the song was finished.

Frequencies lower than 3 kHz are also impractical. Because their wavelengths are so large, they would need proportionally larger antennas. The Navy recently closed a 28-mile-long antenna in Wisconsin that allowed it to communicate with ballistic missile submarines deep under the ocean.
With the battle lines drawn, the question remains who gets which frequencies. Many people compare the spectrum to a natural resource, like oil; its distribution is very important. The government reserves almost 70 percent of the usable spectrum for itself. Every government radio application, from military satellites and forest ranger walkie-talkies to CIA communications and air traffic control, takes place on these reserved frequencies.

Not surprisingly, a separate agency is responsible for government allocation of frequency: the National Telecommunications and Information Administration (NTIA). The FCC has no control over use of these government frequencies. There are several rationales behind this: Reserving a wide band of frequencies for themselves ensures that the government will never have to pay third parties for communications. The NTIA, in the interests of national security, can keep the usage of certain frequency bands classified. The downside of this is that very little oversight exists to see if these frequencies are being used efficiently.

The remaining 30 percent of the radio spectrum is doled out by the FCC. They classify frequencies in two ways: licensed and unlicensed. Unlicensed spectrum may be used by anyone, anytime. Unfortunately, there are no guarantees against signal interference with unlicensed spectrum. This usually isn't a problem with unlicensed spectrum because many devices operating on these bands are low power, such as cordless phones, EZ-Pass tags, wireless LANs, and microwave ovens.

Licensed spectrum makes up the bulk - 98 percent - of the frequencies given out by the FCC. Cell phones, radio, and television are the primary users of licensed spectrum, and they are big business. Television advertising revenue in 2001 was over $35 billion. Radio had almost $20 billion in revenue. With this kind of money, politics are bound to get involved, and the FCC hasn't escaped. Over the years, companies have lobbied the FCC for use of certain frequencies - say, the 2 GHz range for satellite radio. It used to be the case that companies would get what they wanted. Until the last decade or so, unused frequencies were still available, but that is no longer the case.

Today, frequencies are becoming scarce. Consequently, they're becoming much more valuable. This forces companies to innovate more efficient uses of spectrum, so we've seen many advances in communications technology. Even so, the value of certain frequencies has skyrocketed - up to $1 billion per MHz for certain bands in cellular use. Some people have begun to question why the FCC was giving away such valuable frequencies as political favors, so they responded by forming an investigative group known as the Spectrum Policy Task Force. It is this group's job to evaluate 80 years of policy and determine where reform is needed. One recommendation they've made is the increased use of spectrum auctions, where frequencies are sold to the highest bidder. The Bush administration hopes to make over $25 billion on spectrum auctions in the near future. Keep that in mind the next time you are on your cell phone and you hear someone say "Talk is cheap."

The US Broadcasting Board of Governors is soliciting bids to supply a mediumwave transmitter for installation in the Turk and Caicos Islands. The solicitation is for a "50 kW all solid-state MW transmitter with adjustable RF power output capable of being installed and operated in an existing facility on the Turks and Caicos Island; the transmitter shall be a stand-alone device requiring only primary mains power, a conditioned operating environment, and a RF output load; the carrier frequency shall be 1570 kiloHertz." Turks and Caicos, a British territory, is situated roughly 90 miles (145 km) northeast of Cuba.

For several decades there was a radio station in Quebec City in Canada on
1060. Perhaps KYW had to protect this station before 1050 came on the air in
New York. (This station in Quebec may not be on the air now).

A few in our area -

WNBP = Newburyport,  1450 AM = NBP,  obvious
WBOQ = Gloucester,  replaced WVCA (Voice of Cape Ann),  WBOQ orignally was
an all classical station and the BOQ was to represent "Bach".
WCCM = Haverhill, 1490 AM.   The station was orignally at 800 khz in
Lawrence.  "CCM" was supposed to somehow represent "800" in Roman numerals.
It's a stretch.
WLLH = Lawrence and Lowell (two synchronous transmitters at 1400 am)  =
Lowell,  Lawrence,  and Haverhill,  but Haverhill never got a transmitter
WPAA-FM,  Andover - Phillips Andover Academy,  a low-power class D that's
still on the air

B04 schedules. No, these are drafts of tentative schedules that
could still have changes. Officially, those taking part in the HFCC
Conference are not supposed to issue this stuff ahead of time, as the

coordination procedure continues right up to the start of the B04 period. Usually a few days after that, the public version of the schedule is published at <www.hfcc.org/> . Subsequent changes are not usually published. At Radio Netherlands, we do not publish tentative versions of our schedule, but we do try to be as quick as possible in publishing actual changes once the schedule has commenced.

(Andy Sennitt-HOL, dxld Oct 1)

If I may say so this is a ridiculous state of affairs. How on earth do international broadcasters expect listeners to know what freqs to tune in on in if they don't publicise schedules before they take effect? By taking this action the HFCC is completely disregarding the interests of listeners, clubs and indeed publishers who need this information in advance. They should ensure that their "coordination procedures" are completed in suficient time to enable stations to publicise their schedules well BEFORE they take effect. SW listening is decling enough as it is without HFCC procedures getting in the way of providing this essential information to listeners.

(Dave Kenny-UK, dxld / BrDXC Oct 1)

Not knowing the dates when KYW moved to Philadelphia, or when the "NARBA" was ratified, I assume that the move of KYW occurred well before the "NARBA"?  If this is the case, how did the KYW pattern come to have such a deep null towards WINS, which wouldn't have even existed at the time?
>>

NARBA was signed in 1939 and was implemented in 1941. It was in 1941 when the great AM frequency change occurred, and when stations in the same market could be reduced to 40 kHz from 50 kHz spacing.

I believe the move of KYW to Philadelphia from Chicago occurred after two stations were consolidated into one (KYW) in Chicago, but before the 1050 Class II-B assignment in New York was agreed to.

However, before NARBA, 1050 was a U.S. de-facto Class I-A clear (KNX, Los Angeles), and the ceding of 1050 to Mexico as a new Class I-A clear for that nation, and the allocation (but not the construction) of a Class II-B to New York would have been simultaneous with the codification of 1060 as a Class I-B, in-fact, in Philadelhia and a similar station in Mexico City.

So, these changes could have been (and probably were) coordinated.

KYW's prior operation in Chicago, and its early operation in Philadelphia was 10 kW ND-U, on 1030.

The Sunday Times - Business
October 10, 2004

Some of the biggest egos in the country will cram into the Conrad Hotel in Dublin tomorrow when two wannabe broadcasting groups go head to head in a public hearing for a licence to run an alternative rock radio station in the capital.

Phantom FM has the backing of Paul McGuinness, the U2 manager, Trevor Bowen, his business partner, and Denis Desmond, founder of McD, Ireland's biggest concert promoter.

Zed FM, a consortium headed by former FM104 boss Dermot Hanrahan, also features a formidable line-up including Niall Stokes, publisher of Hot Press magazine along with Jim and Peter Aiken, the well-known concert promoters. Bob Geldof, the rock star turned global anti-poverty campaigner, completes the team.

The meeting is considered crucial, as it will be the last chance the protagonists have to influence the Broadcast Commission of Ireland (BCI) before it awards the licence next month for a station that is expected to begin transmitting next July...

Of the stations broadcasting in Dublin, Q102, Spin FM, NewsTalk and Country FM have yet to turn a profit. All are recent entrants to the market and opinion is divided as to whether or not an alternative rock station can be profitable.

"At best they'll have a 4% market share..." says Al Dunne, a former shareholder in Lite FM before its ?15m purchase in 2002 by UTV, the Belfast-based broadcaster. Dunne now runs Unique Media, which represents Q102, Lite's new brand, Ocean FM, which recently hit the airwaves in the northwest last week, and Beat FM, the regional station in the southeast...

Hanrahan, Zed's chairman, is obviously among the believers and said extensive research had shown an appetite for seminal Irish music, British alternative rock and punk/new wave alternatives among other genres. He is confident there is a listenership for little-known artists such as Nina Hynes, The Things and Halite.

"We've done our projections and we're confident that this can be a station that will turn in a profit of a few hundred grand each year," he said. "There's plenty of experience in the consortium. I was involved in FM104 when it launched in 1989 and Jim Aiken was a shareholder. Hot Press has arguably been the only outlet for rock in Ireland for years so we know what we're doing. We're not in this for the short haul." ...

Commercial radio has proved to be a nice earner for many investors since it took to the airwaves in 1989 but the likely introduction of new licences throughout the country could change the landscape over the next five years.

I have been asked to announce this upcoming DX test...

Saturday, October 22, 2004 - WRCG-1420, Columbus, GA will conduct a DX test from 12:00 am - 1:00 am EDT. The test will include Morse code IDs. The station normally runs a news/talk format. A loop of the code and the voice version of the code will be played, with the two alternating code/vocal/code/etc. The station regularly runs at 5 kW ND.

Reception reports(with return postage) may be sent to:

WRCG ANNIVERSARY TEST
1353 13th Ave.
Columbus, GA 31901
OR
E-mail: BGRAY@ARCHWAYBROADCASTING.COM

PLEASE send reception reports - a special QSL card for this 75-year-old station will be sent in return (with return postage and address, of course). The station is relocating in the near future, and the CE is hoping to test again at the new site once that is in operation.

(Due to some personal issues, I am unable to do CPC for IRCA this season; I will, however, do my best to respond to DX test announcements sent to me directly at the ircaonline.org address. If you are interested in volunteering to arrange DX tests, please contact me at the ircaonline.org address (i.e. thru the IRCA website) and I will direct your message to the IRCA president, Nick Hall-Patch. Thanks!! -Lynn.)

Lynn.

Thanks, I saw the coverage on TV but they never said what station it was.  It looked like an AM stick so I figured they'd have to power down. good thing they didn't hit an FM/TV stick....if they'd grounded out the elements they may have been crispy-fried!

Interesting that the BBG is involved in this.  There has been a 1570
station there in the past but IIRC it was a private religious outfit.  I
wonder if the BBG plans to take it over for Radio Marti broadcasts?

A mystery Marti relay is being heard on 1620KHz; DXers strongly suspect
the BBG is buying airtime on commercial station WDHP in the U.S. Virgin
Islands.  (as WDHP vanishes when the mystery Marti relay is on!)

> As noted earlier, though, KYW has a minima, not a null.

OK, strictly speaking I suppose a "null" goes to zero so the minima to the
northeast in KYW's pattern would not be a "null" strictly speaking, but it
is a relatively deep "minima", 20 dB or so as compared with the minima of
less than 5 dB to the southwest.  I suppose it is sloppy thinking, but I
tend to think of "minima" that deep as "nulls".

> I suspect (although I make
> no claims to its accuracy) that the protection afforded the southwest
(since it's
> done with two towers in Whitemarsh, PA, which is to the northeast of
City Center)

Isn't KYW's transmitter more to the northwest of the city center, not the
northeast?

> required that the maxima be directed towards Philadelphia and,

serendipitously, in
> the other direction towards Reading, Harrisburg and Scranton.  As a
result of the

need to direct
> maximum towards Philadelphia, this resulted in a second minimum in the
direction of
> New York.  It was this protection which was already in place that
allowed WHN to get
> their pattern and power.

The two tower array doesn't require a deep "minima" to the northeast just
to achieve a shallow "minima" to the southwest, there is a reason of some
sort that KWY has a deep "minima" to the northeast, and I suspect it is
spelled WHN/WEPN.  If I had owned KYW at the time I would never have put a
deep "minima" in the pattern to the northeast unless the FCC made me do it
for some reason, otherwise it doesn't make any sense.

> So KYW isn't really protecting 1050, and thus a 1-B is
> protecting a II...the antenna design simply fails to provide converage
in that
> direction, but which still required that WHN (or ESPN 1050) protect KYW
to the limits
> required in the rules.

But if KYW wasn't required to protect 1050 then why does "the antenna
design simply fails to provide converage in that direction"?  The antenna
system would be no more complicated if the "minima to the northeast
weren't there, and it would probably be operationally simpler to boot.

> And WINS (that was a mistake, right?) has nothing to do with this....at
1010, it's
> far enough away from 1060 that neither station figures in the pattern of
the other.

Yes, WINS was a mistake on my part, I became briefly confused about which
station was which.

So it would seem.  Do you know if there are any other class A (I) stations
that protect adjacent channel class B (II) stations in this way?

> KYW's prior operation in Chicago, and its early operation in Philadelphia was
> 10 kW ND-U, on 1030.

A 10 kW omni signal would have been much stronger to the northeast than
the current KYW signal.

Why? Groundwave coverage is the principal means of AM station listening.

Radio Vaticana, the Voice of the Vatican State, has decided to upgrade its 600 kW mediumwave tube transmitter to DRM. Delivered by Thales in 1988, this transmitter is still on air daily and in perfect operating condition.

Dunno about the ship, but they're still broadcasting...
>>

KKOL's most recent STA to broadcast from the ship expired on 10/9/2004, three days ago.

There is no record of KKOL applying for permission to operate its application for 50 kW, DA-2.

I presume KKOL will apply to extend the operation from the ship, yet again.

MT,

The old VOA Dixon Site is now owned {Leased} by Globe Wireless.
http://www.globewireless.com/
Coordinates:  121.45W & 38.23N

Large Navy Antenna Farm in N. California
http://lists.contesting.com/archives/html/Towertalk/2001-07/msg00609.html

NOTE:  In 2001 there were "Rumors" of that a 'super antenna array' [HAARP] was installed near the Dixon area.

THE GLOBE WIRELESS NETWORK
-  by Ary Boender - from Worldwide Utility News (WUN)
 Globe Wireless at Dixon, CA.
http://www.wunclub.com/wunstr/wunstr9604.html
ABOUT - Globe Wireless at Dixon, CA.
Dixon Transmit Site Globe Wireless has acquired a radio transmitting location previously used by the VOICE OF AMERICA. The former DIXON RELAY STATION, located eight miles Southeast of Dixon, California, will be used to connect vessels in the Pacific Ocean with land based electronic mail systems, including the Internet. The history of the Dixon Relay Station goes back more than fifty years. Construction began for the radio transmitting facility at the 640 acre Dixon site in 1943. The Voice of America used the Dixon location, starting in 1944, to broadcast information and entertainment to short- wave radio listeners in Asia and the Pacific. Until 1963, the NATIONAL BROADCASTING COMPANY (NBC) operated the site under contract to the US Government. Transmissions from the Dixon Relay Station ceased in 1983. The VOA used three COLLINS 250 kilowatt transmitters and two GENERAL ELECTRIC 100 kilowatt transmitters when the facility was operational. Still remaining on the site are two massive dipole curtain arrays and ten rhombic antennas, most still in operating condition. Skeletons of the GE and Collins transmitters also remain. Globe Wireless plans to install transmitters and antennas for its maritime public coast station KFS at the new site. The current KFS transmitter location, in Palo Alto, California, will be phased out of operation over the next few years. According to company officials, Globe Wireless may also relocate the transmitters for public coast station KPH to the new Dixon location. Transfer of that station's license to Globe Wireless from MCI INTER- NATIONAL is pending FCC approval. The MCI station currently transmits from Bolinas, California. AERONAUTICAL RADIO, INC. (ARINC) will sub-lease space at the Dixon site from Globe Wireless.

ARINC is installing transmitters to communicate with the flight crews
of aircraft flying over the Pacific Ocean and South America.

The FCC has acted to approve the implementation of Brodband Over Powerline technology (BPL) for widspread Internet access in the United States.  We were able to get in and record part of the October 14th proceeding which is now posted as a downloadable MP3 file at our website:  www.arnewsline.org/quincy under the title of "EXTRA".

The speakers you will hear inorder of their appearance are FCC Commissioners Michael Copps, Kevin Martin, Jonathan Adelstein and FCC Chairman Michael Powell.  The presentation concludes with the actual vote to proceed with the implementation of BPL

(ARNewsline)

I have a client who is running a FM station.  He is looking to upgrade his main computer.  It is running an older version of the BSI WaveStation software. It has all the normal PC stuff, with the addition of an Antex SX-36 audio card, and a PLX PCI-9050 card.

The Antex card is ISA, which would be tough to put in a newer computer since they don't come with ISA slots anymore.  Does anyone know of a functional equivalent to this card but PCI instead?  I'm not familiar with the connector it uses.  It looks like a DB-9 with various wires connected directly to their mixing board.

I can't find any information about the PLX board at all.  I don't know what it's used for, and neither do they.  It has what appears to be a very wide D connector on the back (don't recall the pin count), but nothing was connected to it.  Is it safe to omit this board in the upgrade?

Thanks for any help!

```

WASHINGTON (AFX) - Federal regulators on Thursday gave the go-ahead to a new technology that enables powerlines to offer Internet access. They also adopted a rule that makes it easier for the Bell local phone companies to replace their copper wires with fiber.

Michael Powell, the Republican chairman of the Federal Communications Commission, said the rules are aimed at speeding up the construction of high-speed networks.

His point was illustrated shortly after the FCC vote, when SBC Communications said it would "dramatically" speed up its plan to construct a fiber-based network that reaches 18 million households.

Yet critics such as FCC Commissioner Michael Copps, a Democrat, argue the new rules will limit competition, keep prices unnecessarily high and confuse investors.

## Electric issue

The power line decision was meant to address concerns about interference. The FCC set specific rules for power companies on how to avoid interference, especially with amateur radio operators.

The agency avoided the imposition of stricter rules regarding emergency 911, disability access and contributions to universal service, a fund that subsidizes phone service in areas where it is expensive to deliver.

"By crafting a minimal regulatory framework," Powell said, the FCC is advancing a pro-competition agenda that will make high-speed Internet access a reality for almost every American. He noted that power lines go into nearly every U.S. home.
Copps, who partly dissented with the decision, argued that the FCC's failure

to address the stickier issues might actually hinder growth of powerline technology. He said the threat of future regulation may make investors leery of getting involved.

"If we want investment in broadband over power line, we need certainty and predictability," he said.

### Fiber rules

Copps also objected to a new rule that exempts fiber "loops" in all residential neighborhoods from an FCC requirement that guarantees open access to competing Internet service providers.

The local loop is the mass of wires that extend from the nearest central switching office of a local phone company to the homes and businesses it serves.
The new exemption only applies to high-speed Internet service delivered by fiber connections to homes. It expands on a prior rule that exempted new residential developments hooked up with fiber.

Yet network operators still have to let rivals use copper and fiber wires to sell regular phone service to consumers. That rule stems from a major 1996 law whose aim was to foster competition in the local phone market.

Still, the vote reflects a big victory for the Bells. They have argued that there's little incentive to spend big bucks to replace copper with fiber if rivals can use those fiber connections as well. Fiber offers much greater Internet speeds and the promise of new services such as pay TV over phone lines.

The three Republicans on the five-member FCC board proved sympathetic to that argument. They say fiber loops ought to be exempted so investment won't get stifled.

Still, the FCC board did require the local carriers to ensure that the fiber loops extend to within 500 feet of residential homes.

### Industry reaction

Copps and fellow Democrat Jonathan Adelstein said the rule is a setback to competition.
"The local loop represents the prized last mile of communications," Copps said.
"Putting it beyond the reach of competitors can only entrench incumbents who already hold sway."

Consumer groups also blasted the decision.

"The FCC today took our country one giant step closer toward solidifying a two-company domination -- the local cable and telephone providers -- over the consumer Internet market," said Gene Kimmelman, senior policy director of

Consumers Union.
The Bells, on the other hand, reacted with jubilation. Shortly after the FCC vote, SBC said it will "dramatically accelerate" plans to build a fiber-based network "in two to three years rather than five years as previously announced."
The fiber would replace copper in many parts of the network and offer the promise of "super high-speed data, video and voice services," SBC said.

This story was supplied by CBSMarketWatch. For further information see www.cbsmarketwatch.com.

You may wish to check out http://www.airwaves.com/archive3/v9_%2035.html
for some earlier discussion on using other sound cards with WaveSttion.
It may be a matter of calling the BSI folks and seeing if there is anything
modern that is supported, or it may be a matter of trying cards until you
find one that works.

The Antex is just a 16-bit stereo soundcard, nothing too fancy.

It's a dual parallel port.  The PCI-9050 is actually the chipset, so there
is probably some other manufacturer's information on the card.

In the Greater Antilles, there is not good east-west propagation. The 1620 station on groundwave barely makes footfall in Puerto Rico, which is 700 miles or so from the closest part of Cuba. And at night, reception of a 1 kw on 1620 would be really bad in Cuba.

Camarillo-based Salem Communications Corp. is buying WKAT-AM (1360 AM) in Miami from Classical 1360 LLC for $10 million.

Salem is a radio broadcaster focused on religious and family programming.

After closing on the Miami station, Salem will own 101 radio stations, including 62 stations in 23 of the top 25 markets. This will be the company's entrance into the Miami market.

In addition to its radio properties, Salem owns Salem Radio Network, which syndicates talk, news and music programming to over 1,600 affiliated radio stations; Salem Radio Representatives, a national sales force; Salem Web Network, an Internet provider of Christian content and online streaming; and Salem Publishing, which publishes Christian-themed magazines.

Last week, Univision Communications Inc. said it plans to exchange four radio stations that serve the Chicago, Houston, Sacramento and Dallas markets for assets of Salem stations in the Chicago and San Francisco areas.

Bob Haberkost explains this well; the main point is that it is not reflected
skywave.

Dunno if it's still standing, but it used to be bisected by Highway 113
about 10 miles south of town.  Towers and poles all around, wires
stretched out like a streetcar yard.

Although (at the risk that I'll trigger another lesson by Mr Fry about antenna theory) even the term "groundwave" is misleading.  Groundwave propagation is due to the refraction of the wavefront by the earth....this is one of the reasons why lower frequencies have a longer groundwave pattern, and why, in the extreme low frequency band, it goes clear around the earth.  The effect is also evident at VHF and higher frequencies, like the 950MHz STL band.  Objects presented to the wavefront (like mountain ridges) which are similar in size to the wavelength will bend the wavefront, which results in the limited ability to design an STL path which is (slightly) over the horizon.  It's called "razor's edge" propagation then.

We're using a digilink 3 with the dlsw7ex extended switcher, and for some reason, it is working only on every other channel.  It did work on all 7 previously, and during a remodel of the control room, when we hooked it back up, it would only work on every other channel. We have 2 or 3 of these switchers, all have the same malfunction, so we figure it can't be the switcher itself.
We can't buy new automation, digilink free will be no help (too many different satellite sources).  any ideas?

AUDIO AVAILABLE OF FCC DECISION TO PROCEED WITH BPL

The FCC has acted to approve the implementation of Brodband Over Powerline technology (BPL) for widspread Internet access in the United States.  We were able to get in and record part of the October 14th proceeding which is now posted as a downloadable MP3 file at our website:  www.arnewsline.org/quincy under the title of "EXTRA".

The speakers you will hear inorder of their appearance are FCC Commissioners Michael Copps, Kevin Martin, Jonathan Adelstein and FCC Chairman Michael Powell.  The presentation concludes with the actual vote to proceed with the implementation of BPL

>>
So it would seem.  Do you know if there are any other class A (I) stations that protect adjacent channel class B (II) stations in this way?
>>

Other Class II-Bs that receive protection from Class I-Bs include WLAC protecting Boston's 1510.

Other Class I-Bs that now protect other Class I-As or Class I-Bs include WSAI/1530, protecting Buffalo's 1520 (first adjacent) and Bahama's 1540 (also first adjacent). (KXEL/1540, a Class I-B, also protects the Bahamas, and has from the git-go, even though the Bahama Class I-A operated with 5 kW, later 10 kW, and now 50 kW ... when moving to 50 kW, as required by "Rio", the Bahama Class I-A installed a DA to protect KXEL, and perhaps the Class II-B in Albany, NY).

KYW's DA-1 pattern appears to be similar to WRVA's DA-1 pattern, but it it not.

WRVA's is a side-fire, and is symmetrical in two axes.

KYW's is an end-fire and is symmetrical in only one axis.

The nulls towards 1050 are filled by a little. They could be made equal to zero by a minor parameter change.

The minima towards Mexico is a characteristic of the wide spacing of the towers, and is not controllable except by reducing or increasing the spacing between the towers.

The fundamental point here is that KYW's groundwave is protecting the groundwave of a station of lower class, located somewhat less than 100 miles away from it.

If KYW were to change its pattern to loosen it up towards 1050, it would be interfering with a station which was authorized by an international treaty.

Usually, international treaties trump national regulations.

>
> Thanks for any help!

Hi The Antex SX-36 Card is a 16 Bit Audio card that featured a Hardware Audio Decoder and Dual Stereo Outputs.  At the time processor speeds were too slow to decode audio streams so a dedicated DSP on the audio board handled that.
The modern replacement is an Antex LX-24M.  ( http://www.antex.com/products/prof_audio_broadcast.html )
Other Brands are available too probably for less money, I recently used one with software similar to WaveStation from ECHO I picked up at the local Guitar Center Music store.

PLX PCI-9050 is a Chip set used on a Bard, My guess having worked with BSI systems is what you have is a Parallel I/O card used to trigger the Software.  It is nothing like a Parallel Printer Port.    If it was being used it would be connected to a Satellite receiver to trigger Stop sets and Liners or to switches on the Console for the same purpose.  These types of boards are common to Industrial, Laboratory Automation systems.

If they are still going to use the BSI WaveStation I suggest contacting BSI for suggestions about what they are using today.

If my sketchy documentation is correct, the extended switcher
communicates with the DL3 over a 9-pin molex connector cable.
How it choses which of the 7 audio channels is accomplished by
logic levels on three of those 9 pins.  If the lowest bit wire
is not connected properly, it could certainly eliminate every
other source.

Cut to the chase:  it could be the cable.

I saw a TV news story that said power transformers acted as ''speed bumps''
on the information superhighway.  Have they found away around this?  Or is
the powerline Internet service still slower than competing technologies?

Hi!

On http://www.eupolitix.com/EN/Legislation/200305/979dcc8f-93ee-4b61-8daf-2ec2cbba7667.htm you`ll find the information that COM/2002/759 "electromagnetic compatibility" is currently discussed by the european parliament - without beeing noticed by the public. As the introduction is a very serious danger for our hobbies ham radio and shortwave listening there's an urgent need to do something...
The german ham radio society DARC just called all radio amateurs to write a letter to their state's representative(s) at the european parliament (german sample text at: www.darc.de/aktuell/plc )
I think that this action would be more impressive if all european shortwave users would do the same - write to your local representatives explaining to them the importance of undisturbed shortwave reception and the appling international laws (ITU regulations, etc.).

You should distribute and share this idea with other interested groups - tell it local cb clubs or your countries amateur radio society.

And finally: write to your representative who's adress could be found at http://www.europarl.eu.int/whoswho/default.htm

Alan Diskin, veteran South Florida radio host is back on the air after the recent Hurricanes with his popular nostalgia show, Radio Rewound.  He can be heard Sundays, 10-12pm EST, on WJNA, 640 in Dade, Broward and Palm Beach Counties.  The recent spate of hurricanes could not put the kibosh on Radio Rewound!

There are multiple sites that mention Dr. Don and his whereabouts.
And the information in them all conflict with each other.

Get over it.  I'm sure you think your information is as accurate as you can possibly verify and my comments were not targeted toward you specifically.

WPYT 660 Pittsburgh powered up at 6:30 EDST this morning, wiping out WFAN reception in Central Ohio.   Last month they were powering up at 7:00.

I see last month's official sunrise there was 6:00 EST (nb not EDST)
this month's is 6:30 EST (not EDST)

Apparently they're not converting to EDST this month.

Who do I complain to, so that I can hear Imus again, instead of this wretched overnight program?

Naturally there's no website or phone number.

By Thomas Mulvoy, Jr.
October 3, 2004

I know that radio station WEEI took its call letters from the old Edison Electric Illuminating Co. way back when. Do stations like WBZ and WNAC, (which was a radio station, too, once), have any such corporate connections? -- Mary L., Boston.

There's only one person to go to with your question, and she is Donna Halper, a media historian and instructor in the Journalism Department at Emerson College. Says Halper:

"Well, the short answer is some do have a unique history, but in Boston, most do not. Back in the old days, before the FCC, the Department of Commerce assigned the call letters, usually in sequential alphabetical order. First, they had three letter calls, and when those ran out, they moved to four letters, with W for stations in the east and K for the west. Some call letters originally had belonged to ships at sea -- after the tragedy of the Titanic, the Radio Act of 1912 said all ships had to have a wireless station on board in case of emergencies. WBZ, for example, used to belong to one of those ships in the era before commercial radio. Sometime in the early 1920s, a few station owners asked the Department of Commerce to give them special call letters that stood for a slogan. WGN in Chicago, for one, was owned by the Chicago Tribune newspaper, which had as its slogan the 'World's Greatest Newspaper.'

"Although some myths have sprung up, WNAC in Boston (which went on the air first as 'The Shepard Station' in late July 1922, owned by the Shepard Department Stores and John Shepard III) didn't stand for anything. It was assigned in alphabetical order (WNAA, WNAB, WNAC, etc).

"Greater Boston's first station, the pioneering WGI in Medford Hillside (where Tufts College is) was sequentially assigned, too, also in 1922. Before that, it used ham radio call letters, 1XE (the X stood for experimental, because the government thought radio was going to be a fad). The great old call letters of WBZ, which first went on the air in mid-September of 1921 in Springfield, not Boston, didn't stand for anything, either. And although the story exists that WHDH stood for 'We Haul Dead Haddock' (the station originally went on the air in Gloucester), it, too, was another set of call letters that didn't stand for anything in particular when it was assigned in 1929.

Interestingly, the Gloucester station that was its predecessor did have call letters that stood for something: The owners, the Matheson family of Gloucester, originally went on the air in 1926 and requested the call letters WEPS (for Ethel Pearl Stevenson, the maiden name of Mr. Matheson's wife). Briefly, in 1927, there was a home shopping station (really!) in Boston, owned by the Shepard Stores, and it used the requested call of WASN (All Shopping News).

"In addition to WEEI, which was a requested call letter and did stand for the original owners, Edison Electric Illuminating Co., there were others of the same ilk. WNBH in New Bedford, for example, stood for the New Bedford Hotel, where its studios used to be. Still, Ms. Halper said, most Greater Boston stations just took whatever call letters the Commerce Department, the Federal Radio Commission (after 1927), then the FCC (after 1934) handed out.

Anyone know how strong is the signal for 1050 ESPN Radio in New York? Where do they transmit from?  I seem to have more trouble picking it up than I do for other stations such as 660 (WFAN), 880 (CBS), 770 (ABC), 1010 (WINS), etc.  I like listening to sports radio when driving and usually flip between 1050 and 660, depending on what's on or who's at commercial.  660 seems to come in so much clearer.  1050 seems to fade in and out a lot with static and there was even one time, on a Sunday I think, where 1050 was being overpowered by some other station because I was hearing music over the talk and it was not being played by ESPN.  I wouldn't think that ESPN would skimp on the power of their stations.

The patterns *aren't* there.
>>

They used to be ... deleted as a "Y2K" cost saving measure.

>>
OK, there's a table that shows the relative field every (5? 10?) degrees of azimuth, and I suppose you could plot it yourself.
>>

They were every 5 degrees, with both theoretical and "standard pattern" ... plus "augmented" pattern, if augmented.

Also, the precise bearings of the pattern minima and maxima were provided, including any local maxima and minima.

For sale:

Partial ownership in 1 KW daytimer in small Alabama market. 1 KW, non-directional.

This is a joint venture. There is an element of risk and you could lose all or part of your investment (Uncle "Sam" makes me "do" it!) LOL!

Active or inactive investors with $5,000 min. are welcome. No individual may own controlling interest. This includes me!

Total asking price of station is $60,000 cash or $75,000 on terms with $10,000 down. If I can raise at least the $10,000 we are good to go!

I can email digital photos of the station taken just a few days ago.

Tel: (478)741-1710 in Macon, GA.

I am known as the "Radio Crazy" on this forum but I'm not THAT crazy! Last job was Chief Engineer for a 5 KW fulltime AM in New York City. I think that makes me "diplomat with portfolio" eh? (Glare!)

Do not worry, the money will not be deposited in my Swiss bank account until I get permission from my parole officer to fly to Rio! The ticket is with Brazilian Bandit Airways and was paid for using all small unmarked bills!

73,

Meyer Gottesman, W6GIV

Oh, my!  I just made the connection.  I've got a copy of Bob's software,
discovered
quite by accident somewhere, and it's given me hours of fascination.  The only
reason
I suggested radio-locator is because it integrates the pattern with a map, and I
honestly didn't think the inquirer had much need for anything more than a
representation.

But, come on, back at'cha...you know the reason why the disclaimer "for
entertainment

purposes only" is there is because there's no desire on the part of the website to become embroiled in some twit's lawsuit when it's used as a source for a frequency search.  At the same time, I don't think that the radiation pattern or inverse-km is what's being sought, here, but an estimate of what this station's reasonable coverage area is.  In that regard, 2 mV/m or 4 mV/m doesn't really make a whole lot of difference....especially with the crud that's all over the AM band these days.

Obviously all this went right over your head, but it must have struck a nerve somewhere along the way. What does any of this political smearing you have gone off on, have to to with media bias. The example I gave showed how Dan Rather showed incredible bias by choosing an 84 year old with 30+ year old memories and then only asked HER OPINION, not facts. This from the anchor of CBS news and a 60 Mins show known for tough questioning, barging into offices and demanding answers?

Rather to little old lady "Do you think Bush got into the ANG through influence?"

Little old lady "Yes, I do. I've always felt that way"

No further questions required, case proved. He could have asked "What evidence do you have that this is true? What documents did you see? But Dan the man just couldn't seem to get the words out. And you know why? Because he's so full of hate and venom he can no longer think straight. And I would say your previous response puts you in that category too.

The rf output of 1050 ESPN is directional, favoring the northeast. There is a null toward Philadephia to protect 1060 KYW. I don't know where the transmitter is located.

A busy day yesterday in Chicago radio.

Both dailies reported that Bonneville agreed to give its classic rocker WLUP (the Loop) to Emmis Broadcasting, owner of modern rocker WKQX (Q101) in exchange for three Emmis stations in Phoenix--top-rated AM news-talker KTAR, "AC" KKLT (Jack FMish the Peak) and ESPN Radio sports talk KMVP.  Emmis will take over the Loop on Nov. 1 through a broker agreement until the FCC approves the trade.  Bonneville also owns in the Chicago market classic hits WDRV (the Drive), 80s/90s oldies WNND and modern AC WTMX (the Mix).

Q101 is locked in a war for the young male Chicago rock listener with ABC's active rocker WZZN (the Zone), which in the most recent Arbitrons it is winning by only one-tenth of a rating point.  The Drive's softer, older skewing sound is performing better for Bonneville than the "classic rock that really rocks" approach of the Loop, but there are some that believe that atmosphere of the Latter Day Saints Church-owned Bonneville has made it hard for the Loop to perform as well as it could.  There are also rumors that Emmis may move Q101's controversial morning man Mancow Muller to the Loop and bring the station back to its 90s heyday as a young-skewing talker in competition with Infinity's WCKG.  We shall see.

In addition, Salem and Univision made some dealing--with Salem giving CCM WZFS (the Fish), along with San Francisco CCM KFSB (the Bridge) to Univision in exchange for Spanish contemporary AM station WIND (La Tremenda), along with Houston's salsa/merengue KOBT (Orbita 100.7), Dallas' Tejano KHCK (Kick 1480 AM) and Sacramento's KOSL.  Salem also owns religious talk WYLL-AM in the Chicago market, while Univision owns regional Mexican WOJO (Que Buena), the dominant Spanish-language station in the market, and the Latin AC WVIV/WVIX "Viva" metrocast.

It's expected that Univision will flip the Fish to some sort of Spanish format, which will probably enrage its listeners in the same way almost every flip from an English to Spanish format does. Meanwhile, Salem may return WIND to an English news-talker, as it was before Westinghouse sold the station in 1984 to Univision predecessor Tichenor.  However, while Group W's view of news-talk was relatively middle-of-the-road, Salem is expected to do a conservative talk format featuring its stable of syndicated hosts including Michael Medved, Dennis Prager and Hugh Hewitt.  With ABC's WLS flailing about without a GM and losing some of its key local personalities, the time would be right for another hot talker to make an impact in the market.  We will be watching this in the months ahead.

1050 ESPN Radio is 50,000 watts fulltime, just like the other stations you mention.  However...

- AM signals "carry better" at the bottom of the dial.  For the same amount of radiated power, 660 is stronger than 880 which is stronger than 1050 which is stronger than 1560.

- ESPN Radio (and WINS) are directional.  They average 50,000 watts but that power is concentrated in some directions.  ESPN concentrates its power to the northeast and radiates relatively little signal to the southwest, towards Philadelphia.  WFAN, WCBS, and WABC are non-directional - radiating equally well in all directions. WINS concentrates its power due east.  If you're in Jersey, you may be running afoul of the Philadelphia null in ESPN's pattern.  (though WINS should be even weaker)

(there's a station in Philadelphia on 1060; it and ESPN must null their signals towards each other in order to avoid mutual interference)

I live up in California's High Desert, about 90 miles away from Los Angeles, but I'm doing a lot of work "down the hill" now and have had a chance to listen to some of the stations local to LA. I actually have one bank of FM presets dedicated to LA stations, and I have a preset for Star 98.7. I also have a preset for KBIG 104.3. I'm really curious as to what exactly the difference is between the two radio stations, as they are both owned by Clear Channel and both *sound* like Hot AC.

Thanks in advance,
SJS

Brett Pulley, 18 October
Forbes

Lowry Mays built clear channel into the Evil Empire of radio and entertainment. Now his son has to make nice.

L. Lowry Mays is a Texan's Texan, rock-ribbed, 6 foot 2 and larger than life. He started out as an investment banker; in 1972, when a client he was advising backed out of a deal to buy an FM radio station in San Antonio, Tex., Mays partnered with a pal and did the deal himself, paying $125,000. In the three decades since, he has built one of the largest and most powerful media companies in the nation, Clear Channel, a much-maligned giant that, in the view of its enemies, is just too damned big for anyone else's good.

Its tentacles stretch into myriad reaches of media and pop culture. Clear Channel owns 1,202 radio stations in 49 states, more than any other company; each week it reaches 100 million listeners, one-third more than its closest rival(Viacom). It also owns 36 TV stations and the world's biggest outdoor-advertising company, with 770,000 billboards, 150,000 of them in the U.S. that can be seen by 56% of the country's adults in a day. It controls 105 live-entertainment venues, hosting 32,000 performances each year and drawing 70 million people. In the first half of this year Clear Channel sold nearly 10 million concert tickets, more than three times the gate of any competitor. Many of those gigs were booked by the largest concert promotions firm in the U.S., a Clear Channel unit.

"They are the poster child for the evils of media consolidation," says

Jonathan Rintels, who heads the Center for Creative Voices in Media in Washington,D.C. Adds Jay Rosenthal, counsel for the Recording Artists' Coalition, which lobbies against the company: "Clear Channel owns so many radio stations and concert venues that artists are constantly fearful of it." Senator John McCain (R-Ariz.), the popular populist, filed a bill that would force Clear Channel to break apart some of its businesses.

Thank you for the nice comments about AMSTNS (and TVFMSTNS).

What makes these most useful is that Larry Vehorn, W9AJ, keeps the data up to date.  You should be thanking Larry for all his effort.  He's doubtless very busy as the transmitter guru for over a dozen transmitters ranging from Class A FM through UHF TV to 500 kW shortwave beasts. And they are spread from one end of the USA to the other.

Jeff Millers Radio/TV history pages have a section listed for call
letter meanings.  It's at
http://members.aol.com/jeff560/call192x.html

A lot of those stations are long gone however.

Charlie

30 year old memories or even 74 year old memories can be very accurate. Talked to my 86 year old father yesterday about his childhood. He remembers the full names of all his neighbors, dates and intricate and accurate details of when he was 12 years old.

I thought that the "little old lady" was a very credible witness.

As to the ANG and whether Bush got in with special treatment. It was well known in Michigan where I lived at the time that you had to know someone to get into the National Guard. I doubt there were many living Americans at the time that did not fully understand this reality nationwide.

Our born again Christian president said straight faced to the camera the other day that he had no idea that he received any favorable treatment. This has to be a blatant lie or he is from another planet. I was drafted in 1968 and 75% of my basic training unit was black and 90% of those went to advanced infantry training and then straight to the front lines in Nam. They sure knew that they were getting special treatment. How many blacks were in Bush's NG unit?

I don't believe our president is telling the truth. I can't imagine anyone who was of draft age during that time believing him. You don't

have to be full of venom or hate to believe it.

Are you accusing Dan Rather and the other poster of being like about 50% of the population of the United States? I though so!

We are a nation so divided over what has become of things, it seems the most prudent course of action would be to try a different administration and set of policies. Anyone but Bush makes plenty good sense to me.

Star targets women 25-34, non-ethnic, and leans alternative. KBIG is
rhythmic AC, broad in target (25-54) and targets Hispanic females.

You know, if someone or a public interest group has their s**t together, they should mount a campaign to contest every single one of these transfers as contrary to the public interest.  Then watch when the negotiations begin.

This intervention should demand, through the attachment of service level agreements, the re-imposition of news minimums, commercial time limits, public affairs programs (when they're likely to be heard, not buried in the 2-6am slot on Sunday morning). Access airtime for local bands.  Direct those stations with a non-Chicago city-of-license (and the in-city operations, for that matter) to do ascertainments for their cities-of-license, and provide details to the file which would be evaluated for performance when license renewal comes up.  And so on.  And failure to meet these service levels would result in the transfer of the property/ies in question to another buyer, the proceeds of which would fund a media watchdog group which would continue to monitor broadcasters and fund local public broadcasting.  How's that for self-regulation?  If the FCC won't do it, outsource the work.

Basically turn back the clock to the days when broadcasters had a mandate to serve their audience.  In the right hands, it might actually help to invent a new kind of radio, just as media fragmentation in the 60s and 70s helped to bring about AOR, all-news and other formats which are staples in the industry today.

There's no point in imagining that we can trust any of them to tell the truth.  There
is one thing (and one thing *only*) on the mind of a politician:  the next election.

They will say anything to win.  When they are boxed in is when the lies become apparent.
Other than that, they usually sound believable.

Jean Giraudoux said, "The secret of success is sincerity.  Once you can fake that,
you've got it made."

>30 year old memories or even 74 year old memories can be very accurate.

Yes, they can.  Memories of WHAT?  She didn't get a chance to talk
about them.

>Talked to my 86 year old father yesterday about his childhood. He
>remembers the full names of all his neighbors, dates and intricate and
>accurate details of when he was 12 years old.

Sure, but that doesn't make his opinion of Bush any more credible unless Bush was one of his neighbors at the time.

Sure, let's hear what the little old lady remembers. Someone told her they had to let Bush in? She overheard conversations about favors exchanged for letting him in? She saw documents halting investigations of why Bush didn't show up when he should have? She noticed that Bush was among a group of people treated specially in certain ways (name them) in the Guard? She knows that anyone in <this unit> had to kiss <this officer>'s ass? These are things to base a credible opinion on.

>I thought that the "little old lady" was a very credible witness.

Witness to WHAT? That Bush did NOT assassinate Abraham Lincoln? All she stated was her opinion, without any basis, justification, or reasoning. Was it her opinion that ANYONE who got into the ANG received special treatment? If so, why? If not, why does she think that Bush, specifically, got special treatment? What did she see or hear that justifies this?

I'm not saying her opinion is wrong, but I'd like to hear convincing evidence, not just her opinion.

>As to the ANG and whether Bush got in with special treatment. It was
>well known in Michigan where I lived at the time that you had to know
>someone to get into the National Guard. I doubt there were many living
>Americans at the time that did not fully understand this reality
>nationwide.

I doubt that the majority of Americans living at the time even knew there *WAS* a National Guard and that it wasn't a football team or a position on a football team.

>Our born again Christian president said straight faced to the camera the
>other day that he had no idea that he received any favorable treatment.
>This has to be a blatant lie or he is from another planet. I was drafted

Maybe. But the little old lady has not given me any reason to believe that. Maybe she CAN, but she was never given a chance to give one.

>in 1968 and 75% of my basic training unit was black and 90% of those
>went to advanced infantry training and then straight to the front lines
>in Nam. They sure knew that they were getting special treatment. How
>many blacks were in Bush's NG unit?

>I don't believe our president is telling the truth. I can't imagine
>anyone who was of draft age during that time believing him. You don't
>have to be full of venom or hate to believe it.

Ever think of the possibility that Bush actually BELIEVES he didn't get special treatment? (It's not unheard of for parents to exert influence on behalf of their kids behind the kids's backs so they don't know about it.)  Doesn't EVERYONE get served caviar by his personal maid every night?  There weren't really many blacks in the USA (around the time of the Vietnam war), were there?  A few thousand, maybe.  They all move around from one riot to another in different cities :-)  Sure don't see them in MY neighborhood.  Oh, maids don't count.

You can probably argue that I used influence to stay out of Vietnam. I was white, had good enough grades to get into college, had parents well-off enough to pay for some of it (these three alone are probably a significant advantage), and I was lucky enough to be born on a day which drew a high draft number.

Wed Oct 6, 2004

By Franklin Paul
Reuters

Howard Stern, the ribald radio host who has become a poster boy for bad behavior on U.S. airwaves, will jump to Sirius Satellite Radio in January 2006, freeing him from the grips of regulators and giving the nascent satellite radio sector a big boost.

The $500 million, five-year deal, announced by Stern and Sirius on Wednesday, lures Stern away from Viacom Inc.'s (VIAb.N: Quote, Profile, Research) Infinity Broadcasting, and will propel a subscription-based radio business modeled on cable television.

>>
The rf output of 1050 ESPN is directional, favoring the northeast. There is a null toward Philadephia to protect 1060 KYW.
>>

Actually, it is precisely the opposite.

The controllable null in KYW's pattern is towards 1050. This is the only case I am aware of of a Class A station protecting a Class B station.

(KYW has a mimima, NOT a null, in its pattern towards the co-channel Class A in Mexico. The depth of this minima is a consequence of the spacing of the array's two towers).

1050 protects the entire U.S.-Mexican border, as was agreed to in NARBA.

(The two 48-state Class II-B stations on Mexican Class I-A clears were required to operate 50 kW-U, DA-1, and both 1050 and 1220 do so; the two Alaskan Class II-B stations granted by NARBA on Mexican Class I-A clears operate 5 kW-U, ND, but one has been deleted).

1050 didn't exist before NARBA, and was granted 50 kW-U, DA-1, in New York, by that treaty. (1220 was granted 50 kW-U, DA-1, in Cleveland, by that same treaty).

KYW was moved to Philadelphia from Chicago, probably as a 10 kW-U, ND station.

1060 in Philadelphia would be mutually exclusive with 1050 in New York if KYW didn't protect 1050, thereby establishing a defendable Class A contour towards the NE (and 1050) for itself.

Missing from the list is "KSFO" for San Fancisco Oakland

>Senator John McCain (R-Ariz.), the popular populist, filed a bill that
would force Clear Channel to break apart some of its businesses.<

The Senator ought to look up the meaning of "bill of attainder"...and then
withdraw his bill as unconstitutional.

OK, so I guess that explains it.  I do live in NJ so I guess the Phill
station is the reason.  Kind of sucks though.  Why is it exactly that
staions at the bottom of the dial "carry better?"

No, I'm accusing Dan Rather of being a totally unprofessional and biased reporter.  Everyone is entitled to their political opinion. The Dan Rather's of the world and the other poster claimed that they don't let it influence their news coverage.  I just showed you exactly how it does.

Care for some more?  How about this little teaser for the 11 o'clock news from CBS-NY local after the first presidential debate.  "US launchs new military drive in Iraq, dozens of children killed"   The US did launch a new military drive.  Dozens of children were killed. But the dozens of children were killed BY TERRORISTS WITH TWO CAR BOMBS while getting candy from US servicemen.  Is that fair and balanced reporting?  Was that too much to ask from what is supposed to be a professional news organization?

>

Once again, you jokers just prove my point.  Instead of recognizing
the obvious bias shown by the examples, or at least sticking to the
subject, you go off on a political rant, which just shows how
desperate you are.

>

Did all this go right over your head?   The fact that the memories are

30+ years old from an 84 year old lady is just the icing on the cake. Rather asked her if "SHE FELT THAT BUSH GOT IN THE ANG THROUGH INFLUENCE" She said "Yes, I've always felt that way." And then no follow up. Not even a simple "How do you know that?"

I've always felt that NYC is a better city than Chicago. Is that all that's required for it to be true? Do you understand the difference between fact and opinion?

There are plenty of people available with relevant information that directly refutes how the little old lady "felt." Why weren't any of them on either the first or the second 60 Mins show?

As to the ANG and whether Bush got in with special treatment. It was
> well known in Michigan where I lived at the time that you had to know
> someone to get into the National Guard. I doubt there were many living
> Americans at the time that did not fully understand this reality
> nationwide.
>
> Our born again Christian president said straight faced to the camera the
> other day that he had no idea that he received any favorable treatment.
> This has to be a blatant lie or he is from another planet. I was drafted
> in 1968 and 75% of my basic training unit was black and 90% of those
> went to advanced infantry training and then straight to the front lines
> in Nam. They sure knew that they were getting special treatment. How
> many blacks were in Bush's NG unit?
>
> I don't believe our president is telling the truth. I can't imagine
> anyone who was of draft age during that time believing him. You don't
> have to be full of venom or hate to believe it.
> T

And as usual, here we go again. Story has to be true, so anyway you go about proving it, no matter how biased and ethically challenged, it's OK.

Broadcasting does not fall under those provisions.  In truth, were the U-S Congress
to decide to nationalise broadcasting, there's nothing that licensees could do. This
is how the FCC succeeded in splitting TV-radio-newspaper combos in the 70s.  And it
wouldn't be difficult to craft legislation that identifies a class in which Clear
Channel is the only member.  This was done recently in the other direction, when
citizenship requirements to own a U-S broadcast license was changed, but oddly enough
only Rupert Murdoch met the description of the class in the legislation.

7th October 2004

The Broadcasting Commission of Ireland (BCI) has signed a ten year sound broadcasting contract with North West Broadcasting Limited (trading as OCEAN FM) to provide a local sound broadcasting service for the franchise area of Donegal South, Sligo, and Leitrim North.

OCEAN FM launched last Saturday (Oct 2nd) and aims to provide a locally focussed, nationally aware radio service for all age groups that will become an integral part of life in Counties Sligo, North Leitrim and South Donegal. The station will deliver a high quality, local radio service to the listeners of the franchise area, providing programming that will entertain, inform and engage the diverse audiences of these counties. Comprehensive local news, sports and current affairs programmes will provide for the interests, concerns and issues affecting the listeners of the area.

The station has a dedicated broadcasting studios in each county within the franchise area.

The station replaces North West Radio which did not have its licence renewed after 14 years of broadcasting to south Donegal / Sligo / North Leitrim. North West Radio had threatened legal action against the BCI but this was withdrawn and the station which had gained much support closed down on Friday last. NWR sister station Mid West Radio continues to broadcast from Mayo on 96.1 FM & 97.1 FM.

CBS News has nothing to do with the local news operations of the network-owned stations.  They've been independent of the network news operation for at least thirty years or more.  The network provides news video packages to their affiliates, but each individual station's responsible for its own product.  Dan Rather doesn't dictate to the local stations, and vice versa (or at least I hope they don't dictate to Dan Rather).

And could we have the citation of your facts--preferably AP or Reuters, not NewsMax or Drudge?

The Communications Act of 1934, as amended, 47 USC, is constitutional.  I don't have time to go into case law with you, but consider that the First Amendment provides absolute and unfettered freedom of expression, whereas the FCC is empowered to determine who, when and where such speech will occur.  Further, while the FCC self-limits the degree of interference it imposes on the subject matter aired in the interest of promoting a diversity of voices, it still has the Fairness Doctrine in place, although much gutted today, which requires that a station espousing an opinion or advocating an outcome or political candidate offer equal and equivalent time to opposing views or spokesmen.  Finally, the FCC has rules defining and limiting indecency.  The First Amendment makes no such distinctions in any of this.

Numerous Supreme Court cases have considered these issues over the years, and have repeatedly affirmed the constitutionality of the Communications Act of 1934. Therefore, given the contradictions between the First Amendment and the restrictions imposed by and the powers granted the FCC, it can be concluded that broadcasters have limited free-speech rights, far less than a newspaper or other printed matter, and certainly far less than the freedoms granted individuals.  Broadcasting is thus not fully protected by the First Amendment, and given the opinions of the relevant cases before the Supreme Court, such abridgements in freedom of speech are constitutional.
All the rest is derived from this one fact.

Amateur Radio Newsline™ Report 1417   October 8, 2004

Amateur Radio Newsline report number 1417 with a release date of Friday, October 8, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T.  A New Jersey radio club makes a big donation to the local community and hams in Great Britain may get more privileges on 40 meters.  These stories and more on Amateur Radio Newsline report number 1417 coming your way right now.

(Billboard Cart Here)

**

PUBLIC SERVICE:  RADIO CLUB DONATES $400,000 TO NJ PARK

A radio club has donated $400,000 to Essex County, New Jersey.  This, to pay for renovations already made to Irvington Park where the club has its headquarters.  And there's more money on the way.  Amateur Radio Newsline's Henry Feinberg, K2SSQ, has the rest of the story:

--

According to a story in the September 29th edition of the Newark Star Ledger, the $400,000 donated by the Irvington Amateur Radio Team came from the states Green Acres program.  It will be used  to pay part of the $1.1 million in renovations that included new tennis courts, basketball courts, benches and a track.

The club, a nonprofit organization that volunteers as keepers of the park.  It is expecting another $500,000 in Green Acres funds to pay for the second phase of the parks upgrade.  Phase I of the $2 million overall was completed during early summer.  Phase II, scheduled to begin next year, will include a second floor addition to the field house, where the radio club has its headquarters.

Phase I was completed during early summer.  Phase II, scheduled to begin next year, will include a second- floor addition to the field house, where the radio club has its headquarters. The funds obtained by the club have been matched by Essex County.

Charles Freeman, N2JGC, is the clubs president.  He says that the park renovations have boosted community pride.

--

Freeman:  "Its all volunteerism.  Its a bunch of wonderful people who dedicate their time and service to I-ART - the Irvington Amateur Radio Team, the Office of Emergency Management, CERT, and any way we can get involved in helping out our community."

--

Feeeman says that this has helped get some of the children off the street by getting them involved in computers and amateur radio.

For the Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ.

--

The club brought its headquarters to the park in 1998.  Soon after, members became the primary caretakers of the facility.  (Star-Ledger, ARNewsline(tm))

**

RESTRUCTURING:  VICTORIA VK HAMS LOOSE LOWER HALF OF 70CM

The bottom half of the 70 centimeter band is no longer available for amateur radio in most of Australia's Victoria state.  This, as the result of a new exclusion zone that has just become law.  W-I-A reporter Jim Linton VK3PC explains:

--

The ACA has prohibited all amateur radio activity on the 420-430 MHz band within Victoria in an area of up to a 250 kilometre radius of the

Melbourne General Post Office. That band will now be used for a new state-of-the-art digital radio system to replace the current analogue systems of the Victoria Police, Metropolitan Ambulance Service and Metropolitan Fire Brigade.

The exclusion zone has been anticipated and comes after other permanent Exclusion zones were imposed for similar purposes around Perth and Sydney, including the Australian Capital Territory. The band 420-430 MHz has been used for amateur fixed links and amateur television. The WIA has assisted with the timely closure and migration of those links in Victoria in liaison with the Bureau of Emergency Services Telecommunications and the ACA.

The new digital voice and data radio system now being installed for Emergency services will also provide common coordination channels to support multi-agency response to major incidents and events. The aim is to have it fully operational well in advance of the Melbourne Commonwealth Games in 2006. This has been

Jim Linton VK3PC for WIA National News.

--

Where else the A-C-A will impose these exclusion zones is not known as we go to air.  (WIA News)

**

RESTRUCTURING:  MORE 40 METERS FOR UK HAMS

Meantime there is much better news coming from the U-K.  That's where Ofcom -- the Office of Communications -- says that it might change the rules and give that nations hams more access to 40 meters.  Jeramy Boot, G4NJH, is in Nottingham with more:

--

Ofcom is proposing to vary the Foundation, Intermediate and Full amateur radio licenses to permit UK amateurs to operate in the band 7,100 to 7,200kHz.

The band would be allocated to the Amateur Service on a Secondary basis, and would be available on the basis of non-interference to other services, inside or outside the United Kingdom.

Ofcom announced a one-month consultation period beginning on 23rd September and all license-holders are invited to make representations to this proposal in writing or by e-mail.

Jeremy Boot, G4NJH

--

The cutoff date for U-K hams to comment on this proposed Notice of Variation to the nations Amateur Service rules is October 23rd.  (GB2RS)

Break 1

>From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the WB9AET repeater serving Chicago Illinois.

(5 sec pause here)

**

RESCUE RADIO:  SATERN IN THE PUBLIC INTEREST

Ever hear of SATERN?  Not the planet but a group of true helping hams that are always ready to serve the public need.

In our reports on the numerous hurricanes that hit the United States mainland the past few weeks we have often referred to several high frequency service nets. These include the Hurricane Watch Net, the Maritime Mobile Services Net and of coarse SATERN - the Salvation Army Team Emergency Network.  You heard a lot of audio from the Hurricane Watch Net and the Maritime Mobile Services Net in our reports, but little of SATERN.  That's because it was not really audible at our studio here on the U-S west coast.  But we recently caught it being relayed on the Internet by K-A-4-E-P-S audio website and grabbed a few minutes of it in operation.  Sometimes it takes nothing more than a referral to help out.  Take a listen:

--

SATERN Net Audio.  Hear it in the audio report at www.arnewsline.org.

--

Some of you may say that it sounds a little boring to just sit there hours on end, taking messages or directing people to a website.  But that's an important part of the Salvation Army's job and the SATERN Net is one of its most important tools.

Major Pat McPherson, WW9E, explains it all on the SATERN website.  He says that the Salvation Army Team Emergency Radio Network provides emergency communication support to the Salvation Army wherever needed. As a result, SATERN members have found themselves in tornadoes, floods, hurricanes, fires, aircraft accidents, bombings, earthquakes -- just to name the more expected types of emergencies.

In short, SATERN is not your ordinary radio club or net. Maybe not the most exciting to listen in on but it is ham radio in service to the public, at its very best.  (ARNewsline(tm))

**

ENFORCEMENT:  ENNIS COMMUNICATIONS IN $300,000 CONSENT DECREE

Turning to enforcement news, word that Emmis Communications has reached a $300,000 settlement with the Federal Communication Commission.  This, after admitting that it broadcast indecent material on the airwaves.

Emmis owns 27 stations nationwide. The settlement comes in part from comments made by a nationally syndicated Chicago shock jock named Mancow Muller.  Muller is an air personality at  WKQX-FM and has been the source of every previous FCC fine issued to Emmis.  To date that totals $42,000.

Besides the $300,000 payment, Indianapolis-based Emmis has also agreed to implement a company-wide plan intended to prevent future violations.  (FCC)

**

ENFORCEMENT: ONE LAST CHANCE FOR K1MAN

The FCC appears to be giving Glenn Baxter, K1MAN, one final chance to strictly conform to the agency's Part 97 rules. This, before taking action against the Belgrade Lakes, Maine ham. The FCC's Daryl Duckworth, NN0W, explains:

--

Duckworth: "A warning letter went to Glenn Baxter, K1MAN, of Belgrade Lakes, Maine. Back in April of this year the Commission notified him of two areas of operation that would lead to enforcement action and / or designation for a hearing to determine his qualifications to remain a licensee. This is regarding deliberate interference to ongoing communications and using the station for pecuniary interest.

Copies of the warning notice were also went to the United States Attorney in the United States Department of Justice, District of Maine.

This is Daryl Duckworth, NN0W, reporting."

--

In the September 15th Warning Notice the FCC's Riley Hollingsworth tells Baxter that the Commission has received approximately a dozen complaints that K1MAN Amateur Radio transmissions started on top of ongoing communications of individual operators, as well as on top of ongoing communications of the Salvation Army Team Emergency Radio Net. Hollingsworth says that this is a net that has been handling health and welfare traffic for this season's hurricane victims.

As to the pecuniary interest allegation, the FCC says that this is because Baxter's website lists a bulletin service transmission schedule and items for sale on the same pages. The FCC says that this is in violation of Sections 97.113(a)(2)and (3) of its rules.

Hollingsworth ends the letter by saying that failure to correct the violations will subject Baxter to enforcement action against his station and operator licenses. Baxter was given twenty days from the date the warning notice was issued to resoind. (FCC, RAIN)

**

ENFORCEMENT: FINE "KIND OF" REDUCED FOR GOOD BEHAVIOR

And a follow-up to a story we reported some time ago about a few unauthorized transmitters coming on the air in California. This, in 2003 around the time of Super Bowl thirty-seven. Amateur Radio Newsline's Bruce Tennant, K6PZW, is here with an update:

--

As listeners may recall, Global Radio, Inc. had requested that the FCC issue authority for it to operate on transmitters 89.1, 92.9, 93.7, 96.9, 104.1 and 106.9 Mhz. This, in conjunction with the Super Bowl thirty seven activities at Qualcomm Stadium in San Diego. T

he FCC granted operation on 93.7 and 96.9 Mhz under the call sign WN3XFL, but it specifically denied Global's request to use 89.1, 92.9, 104.1 and 106.9 Mhz. This based on possible interference to existing stations in Mexico and the U.S. as outlined under bi-lateral agreements.

But on January 26, 2003, an agent from the San Diego FCC field office was listening to the FM band. He observed that WN3XFL was active and operating, without authorization, on 88.98, 104.1 and 106.9 Mhz. This, in addition to its permitted operations on 93.7 Mhz and 96.9 Mhz.

Global's willful violation of its operating authority initially resulted in a fine of $12,000. In its reply, the company claimed it could not pay that amount but the Commission didn't buy that argument. Global also argued that its otherwise unblemished compliance record should be taken into account.

Well, the FCC did just that. Well, kind of. Because of the unblemished record, the Commission reduced the fine by $1200. If you do the math, that's now a fine of $10,800 that Global has been told it has to pay.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

The full FCC finding in this case is on line at
http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-04-3017A1.doc (CGC)

**

THE HAM BUSINESS WORLD: A HEALTHY C3I

Turning to the ham radio industry, C3I says that it is not out of the ham radio business. In fact, following a short pause to reassess the current business climate, the concern is shipping out products and its business as usual according to company owner Owen Wormser, K3CB.

--

Wormser: "We are fully operational. We have built up a good stock of out standard antennas. We have taken special orders the last two weeks. So, we have been able to recover in about two to two and a half weeks time."

--

C3I is a unique company that manufactures printed circuit board modules, VHF, UHF and Super High Frequency, high-performance Yagi antennas and related accessories for the Amateur Radio and land mobile market. More information is on-line at www.c3iusa.com and look for a complete company profile with K3CB on an upcoming Rain Report.
(ARNewsline(tm))

**

THE SOCIAL SCENE: TITUSVILLE FL. IN OCTOBER

Florida's North Brevard Amateur Radio Club will be among the first to begin celebrating the return of the good days following the hurricanes of 2004. This, as it announces that its Titusville Hamfest will be held on Saturday, October 23rd.

This year's venue is the Disabled American Veterans Chapter 109 building in Titusville. The event is open to the public from 7 a.m. to 2 p.m. Eastern time. More information is on the club webpage at www.northbrevardradioclub.org  (Via e-mail)

**

THE SOCIAL SCENE:  SAN DIEGO HAM RADIO ROUNDUP & HAMFEST

And on the West side of the country the San Diego Roundup and Hamfest hosted by ARRL San Diego Section takes place October 30th from 8 a.m. to 4 p.m.. The location is Hilltop Recreation  Center on Ovieda Way at San Diego.  For more information contact KC6NXZ by telephone at area code 619-561-6678 during normal business hours Pacific coast time.
(Via e-mail)

**

BREAK 2

This is ham radio news for today's radio amateur.  From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

RALPH WRIGHT (MIKE RIVERS), W5JVI - S.K.

More sad news to report with word of the passing of Ralph Wendel Wright, W5VJI.  Better known to his many fans as Mike Rivers, Wright dominated the airwaves at radio station CKLW from 1967 to 1970.

Wright suffered a cerebral bleed in May from which he never recovered.  He passed away at his home in Antioch, Tennessee on Monday night September 13th.

In addition to being a top rated air personality W5JVI was also a gifted musician, jingle writer, a master at radio production and a very active ham radio operator.  No public memorial service was planned.   (W2JKD)

**

## THE CHANGING OF THE GUARD:  FRANK TUREK, DL7FT - S.K.

Also, noted D-Xpeditioner, Frank Turek, DL7FT, became a "Silent Key" on August 17th.  Over the years Turek traveled to many rare locations to hand out new country  contacts to many operators worldwide.  He is survived by his wife Siegrid, DL7CN, who will be handling QSL duties and will continue to keep the DL7FT Post Office Box open.  (OPDX)

**

## NAMES IN THE NEWS:  RAC LEADERS RESIGN FOR HEALTH ISSUE

Two key officers of Canada's national Amateur Radio Society have stepped down for health related reasons.  According to an RAC bulletin issued on October 5th, President Daniel Lamoureux, VE2KA, and First Vice-president Bob Nash, VE3KZ have resigned after having been hospitalized with heart related problems.

The bulletin says that the Radio Amateurs of Canada Board of Directors will convene a special meeting as quickly as possible.  This, to deal with the vacancies created by these resignations.  No date for the meeting has yet been announced.  (RAC)

**

## RADIO HEALTH:  KOREAN RESEARCHERS CLAIM CANCER CONNECTION TO HIGH POWER RADIO TRANSMISSIONS

Korean scientists sat that they have found that regions near some A-M radio broadcasting towers show 70 percent more leukemia deaths than those without.  This, according to Wired News which reports that  the study, to be published in an upcoming issue of the International Archives of Occupational and Environmental Health, also found that cancer deaths were 29 percent higher near such transmitters.

Two years ago an Italian investigation found death rates from leukemia increased dramatically for residents living within two miles of Vatican Radio's powerful array of transmitters in Rome.  The Koreans looked at the death rates in 10 regions with AM radio transmitting towers broadcasting at more than 100 kilowatts and compared them with control areas without transmitters.

The substantially higher cancer mortality in those who lived within two kilometers of the towers led researchers to conclude that more investigation was needed. However, they also said their study did not prove a direct link between cancer and the transmitters. (Published news reports)

**

## HAM RADIO NEAR SPACE: A NEW ALTITUDE RECORD BY SIMSAT 1B

Pat Kilroy, N8PK, reports a new altitude record of over 112,900 feet was set by the SimSat-1B mission when it flew last week. Pat says that while the VHF telemetry failed early in the flight there are numerous clues as to why and the group is piecing the puzzle to help improve for future operations.

The Simulated Satellite or SimSat project is an education and outreach activity being developed by N8PK at the NASA Goddard Space Flight Center. A SimSat spacecraft uses a small high-altitude weather balloon platform to fly experiments designed and built by students to near-space altitudes.

In this case, a tiny CricketSat transmitter on UHF was also on board as a last minute hitchhiker. Powered by a standard 9 Volt alkaline battery and producing under 20 milliwatts, it operated all the way through splashdown and saved the day for tracking the flight.

More information and the part ham radio plays is on line at www.patkilroy.com/simsat on the World Wide Web. (N8PK)

**

## HAM RADIO IN SPACE: MICROSAT ON DISPLAY

And some news from Dr. Perry Klein, W3PK, who says that The Smithsonian National Museum of American History has put a Microsat Mechanical Test Model on display in time for AMSAT's 35th Anniversary meetings. The satellite is suspended from the ceiling outside the NN3SI Smithsonian Amateur Radio Club station. That's located at "The Information Age" exhibit on the first floor at the West end of the American History Museum. (ANS)

**

## HAM RADIO IN SPACE:  SOLDERING ON-ORBIT

Meantime, the ham astronauts on the International Space Station have been trying to solder in zero gravity, and the results are intriguing. The NASA website says that the solder, heated, became a molten blob with a droplet of rosin clinging tight to the outside.  As the temperature increased, the droplet began to spin, round and round, faster and faster, like a miniature carnival ride.  You can see and enjoy the video of this experiment at at: http://science.nasa.gov/headlines/y2004/16aug_solder.htm (ANS)

**

## DX

In D-X, word that G3UML is joining the Oceania DX Group operation from Lord Howe Island which is scheduled to start on 9th October. Separate stations will be active on CW and SSB.  (GB2RS)

And look for DF7XE to be active portable SV8 from Thassos Island through the 13th of October.  He will be using CW, SSB, PSK31 and RTTY on 10 to 80 meters.  (OPDX)

Lastly, information that PA0CJH operating as 9G5JH is active from Ghana until November 13th.  He is on 80, 40, 20, 17 and 15 meters using SSB, CW and PSK31.  For each of these operations, Q-S-L as directed on the air.  (OPDX)

**

## THAT FINAL ITEM:  ITS JOTA TIME

And finally this week, its time for scouts around the land to get together and take to the ham bands in the annual Jamboree on the Air. Amateur Radio Newsline's Mark Abramowicz, NT3V, is also a parent involved in the scouting program and has this inside look at the big event:

--

It's one of the best operating events of the year.

Why?

Because it showcases the best of our hobby to thousands of young people across the country and around the world.

For me, and others, it also gives us as operators a chance to reach out in brotherhood and friendship to young people. We get to serve as a bridge with our radios to other children and teens who share similar interests in Scouting.

Charlie Beck, chairman of Venture Crew 59, sponsored by the Frankford Radio Club and based out of Kutztown, PA is excited about his group's plans.

He says they will be operating KC3BSA from the Hawk Mountain Scout Reservation in Summit Station in eastern Pennsylvania.

"We're going to set up a couple stations in our science and tech center," Beck says.

At this point, he says you'll find Crew 59 on the HF bands on phone, CW and PSK 31. He says there are also plans to set up a VHF station and an EchoLink position.

Becks says the best part of the weekend event is getting visitors to the operation involved.

"I know we have some Girl Scout units and Cub packs and Boy Scout troops that will be stopping by," Beck explains. "They'll all get a turn to get on the air and try to make a contact with another Scout in another part of the world."

Beck says some get mike-shy, but that quickly dissolves with the help of a Venture Crew member sitting beside them.

"They'll be giving their name, their rank and talk about their hobbies and tell them where they're calling from which would be Schuylkill County in eastern Pennsylvania," Beck says.

Beck says the special part about JOTA is its diversity.

"There are Girl Scouts and Girl Guides. There's the World Association of Girl Guides and Girl Scouts that are invited to join in the JOTA," Beck says. "There's also a patch that the Girl Scouts can earn just like the Boy Scouts can earn for making contacts."

And, he says, for those who are a little shy about grabbing the microphone, there's also a keyboard.

"It's interesting to find the quiet Scout or the quiet boy to come in and sit down and get behind PSK 31 and really get in there and spend an hour chatting with different people around the world," Beck says.

Beck says Scouts across the country and around the world will be camping out and working radios from field conditions. Others will be going to stations of operators who've invited them in to take part.

Operators play a big part in making it happen and whether you've been a Scout in your lifetime isn't a factor. It's simply sharing the joy of the Amateur Radio service we've all come to appreciate.

Hope to hear you on the air during JOTA weekend.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

The 47th Jamboree on the Air takes place October 16th and 17th.  More information is on line at www.scout.org/wse/jota.shtml and the Leagues website at www.arrl.org.  (ARNewsline(tm))

This all seems quite strange, so I assume there is a good story to explain
how it all came about? Not knowing the dates when KYW moved to
Philadelphia, or when the "NARBA" was ratified, I assume that the move of
KYW occurred well before the "NARBA"? If this is the case, how did the
KYW pattern come to have such a deep null towards WINS, which wouldn't
have even existed at the time?

By Ellen Simon, AP Business Writer
New York

Shock jock Howard Stern's move to Sirius Satellite Radio Inc. begins an association between a man who was happy to describe, in detail, Paris Hilton's sex tape and the industrial giants of the auto industry.

Shocked? Don't be. After all, every car show has its company-sponsored cleavage.

The audience for satellite radio is "the car-buying male public," said Scott Greenstein, president of entertainment and sports for Sirius radio.

Sirius and its larger competitor, XM Satellite Radio Inc., know they need men to embrace them if their business plans are to work, and the auto industry is more than happy to help.

http://newsobserver.com/24hour/business/story/1720990p-9534162c.html

Even though Sirius has lost more than $1 billion in the last five years and XM has lost $1.5 billion since 1992, they've attracted investments from most of the large auto makers.

Daimler-Chrysler Corp. has invested $100 million in Sirius. Honda Motor Co. has put about $50 million into XM while General Motors Corp. has invested $120 million and given XM a $250 million line of credit.

And that's not all. There are other incentives: GM and Honda pay for the first three months XM subscriptions in some model cars, said Chance Patterson, an XM spokesman.

The Acura TL, Cadillac Escalade and Chevrolet Cobalt advertise XM radio availability. "You go to a dealership and XM has a visible presence there," Patterson said. "Most dealers have an XM kiosk with a radio and a lineup."
"How important is the car industry? Critical," he said. "Half of our subscribers come from the new car market."

Men are "the group most likely to be buying cars," said Sirius spokesman Jim Collins. "This is the group listening to all the sports programming, the group likely to spend a lot of time in their automobiles. That's why the Stern agreement is so important and a watershed for us. It mirrors our target audience."

Stern, who said Wednesday that he would move to Sirius in 2005 as part of a $500 million deal, is such a natural fit for satellite radio that XM executives said they had negotiated with him too. Apparently, they decided his price was too high.

XM, the dominant player in satellite radio with 2.5 million subscribers to Sirius' 600,000, launched a show Monday by equally salacious shock jocks Opie and Anthony.

Satellite radio doesn't lease the public airwaves, as traditional radio does, so it isn't subject to the decency scrutiny and hefty fines from the Federal Communications Commission the shock jocks face on traditional radio.

XM charges listeners extra to hear The Playboy Channel, whose programs include "Judge Julie's unique brand of justice on Sex Court."

Sirius hasn't been shy, either.

In an ad the Advertising Women of New York voted "most sexist ad of the year," Sirius showed buxom "Baywatch" sex symbol Pamela Anderson washing a car by sliding across it in short-shorts and a wet tank top and buffing the chrome with her bottom.

Auto makers are betting satellite radio's mix of content and marketing will convince customers to buy dedicated satellite radios, which usually cost $100 or more, and pay $9.95 to $12.95 a month to listen to them. There are stereo models for the home, wireless kits that can adapt a traditional radio to satellite and portable radios that can move from a car to a boombox mount.

Still, the 1 million GM cars sold with XM radios since the company started installing them three years ago are a fraction of the 17 million vehicles sold in the United States last year. XM predicts GM and Honda will make another 1.5 million cars this year equipped with XM radios.

Sirius, which entered the car market later than XM, is far behind. Only 112,000 cars had Sirius radios at the end of June.

Sales of satellite radios were heavily skewed toward male techno whizzes and audiophiles when the radios first rolled out, said Scott Tappan, the sales and marketing manager for XM Satellite Radio and GM subsidiary OnStar Corp. Now, "It's still generally male, but we are seeing a whole lot more females."

To give listeners a chance to test drive the radios, Sirius has an agreement with the Hertz Corp. and XM has a deal with Avis Rent a Car, Inc. Avis has seen an increase in demand for its premium and luxury cars since XM radios became standard equipment in those categories, said Susan McGowan, an Avis spokeswoman. The company even includes references to XM in its national advertising campaign.

She said men love the NASCAR broadcasts, and 21 channels of regional weather and traffic and an emergency channel, which "had all kinds of road closures and evacuation information that wasn't available elsewhere" during the Florida hurricanes.

Both XM and Sirius have more than 100 channels, and both offer channels focused exclusively on love songs, 60s music and classic soul.

But there's also lots of testosterone-tinged programming, especially on underdog Sirius, which has spent millions on deals to air the National Football League, National Basketball Association and National Hockey League games.

It has a garage rock channel produced by Bruce Springsteen's E Street Band guitarist "Little Steven" Van Zandt and is launching another produced by rap star Eminem and Jimmy Iovine, chairman of Interscope Records.

Sportswriter Mitch Albom, football commentator John Madden and the men of the Orange County Chopper custom bike shop all have shows.

Then there's the "Wiseguy Show," promoted as a celebration of "life, the arts and meatballs."

No signal is transmitted back to XM from the receivers, so there's no way XM
knows what you're listening to. Randomly e-mailed surveys, I believe, are
what XM bases its listenership estimates on.

I listen to channel 15, too, and would love to tell XM so, but have never
been surveyed in my two years as a subscriber.

Howard

By that logic, then, a cool day on Venus would be somewhere around 350C, rather
than
400C.

You can't measure the centre based on the average of a pre-selected group.
Left/right, when considering politics, can be easily determined in a vacuum if you
look at the policies and values of each group.  Conservatives view the world as
entirely self-actuated, self-rewarded and assumed risk at the individual level.
Facism extends this concept to business, where the relationship between government
and business is distinctly favoured over individual rights.  Socialists and, going
further, communists (and not the Soviet kind) view the world as mutually-actuated,
mutually-shared rewards and mutually-shared risk.  By that measure, Congress is
distinctly conservative, FOX News is clearly right-wing, and we're all going to
hell.

CBS, as is the case for all legitimate news organisations, is better at covering a
story with balance and provides opportunities to hear opposing views.  FOX
exhibits
no such behaviour.  And Steve is right.

GELLER MEDIA INTERNATIONAL NEWSLETTER FALL 2004

DON'T MISS THE SESSION AT THE NAB:

"Why can't we find any great talent?"

That's the lament of managers all over the planet.  The biggest challenge facing many managers is finding, developing, and growing on-air people who will attract large audiences and lead your stations to greatness.

DON'T MISS THE NAB!
If you are struggling with this and will attend the National Association of Broadcasters meeting in San Diego, I invite you to my session on Talent Development , taking place Friday, October 8th at 1:45 PM.
(for details: www.nab.org)

There, you'll have a chance to learn proven Powerful Radio methods used worldwide to find and develop on air talent.  In a question/answer forum, including
case studies, you will hear respected and experienced broadcast managers who've all had years of success developing talent..  Dan Vallie of Vallie/Richards, Rod Arquette program director of KSL Salt Lake City, and Joyce McCullough,
General Manager of the Miller Media Group in La Salle, IL, will all be joining me for this discussion.

If you cannot be with us in San Diego, here are a few ideas you may find useful in finding, growing and developing air talent.

Geller Media International
Secrets to Powerful Radio Talent Development.

HIRE RIGHT:
1. Know what you want: Don't hire an apple when you really want an orange. (Example, it's not fair to hire a strong personality and then shut him or her "down" with tight or restrictive formatting.)

NOTE: For on air personalities and producers: This also means you need to take responsibility and make certain this "casting" is right for you.   Don't take a job that puts your "foot "in a "wrong shoe."  If you are looking for a gig, and the one you are offered isn't really right for your skill set or talent, don't take THAT job!

2. How do you find these people?
Look beyond the obvious, go beyond hiring someone who just sounds polished and professional.  Find great storytellers.  People who have original thought, are good listeners, with a sense of humor.  If you cannot find a broadcaster, look for people who are smart, passionate, comfortable communicators, real personalities. People who like to talk, have interesting things to say, and are also good listeners.

We've had luck developing people from a myriad of professions other than broadcasting for radio including lawyers, teachers, psychologists, ministers, priests, writers.  Many have become successful and powerful broadcasters.

We can teach a talented communicator how to work in radio.  This includes introducing them to the target audience we are trying to reach, showing the potential on-air personality HOW the listener uses radio, and how intimate and personal the medium of radio is.  (eg: Talk directly to the ONE person listening, the importance of describing visuals, etc.) After they've tried it, we aircheck in a one-on-one coaching session, using specific criteria, while playing back the program.  This helps each individual move up to the next level of performance.

AIRCHECK CRITERIA:
3. Things to look for include: What journey did this show take you on that you could not have gotten to on your own? What was new? Was this funny? Did it have a talkable topic that listeners could discuss with others when the radio went off? Was it boring? Did you feel the time passed quickly or did it drag by? Did the show hold up a mirror and reflect life? Do you "know" the presenter from hearing the show? Would the listener feel connected to the talentr? Was it fun? Informative? Were any risks taken? Were there any surprises?
Were you entertained?

You can find more on airchecking in "The Powerful Radio Workbook: The Prep, Performance & Post Production Planning." www.gellermedia.com

In a word, no.  Without an uplink (XM and Sirius receivers are no different than a
conventional radio in that regard) there's no way for XM to know if anyone's
listening.  This is, perhaps, one of the reasons why they're now duplicating
(although they're charging for it) Sirius' music streams on the web, so as to
measure
who (or, more specifically, how many people) listen to one stream over another.

As residents clean up in the wake of Hurricane Ivan, Tim Skelly Cason, professional musician from Fort Walton Beach, Florida, now in Los Angeles California says:

"My Brother, Ted Cason of the Okaloosa County Sheriff's Dept. has been working with local residents using all types of short wave communications.  All communication was lost during and immediately following the storm.  Short wave devices became the source of communication within the department and to contact residents around Fort Walton Beach and Destin."

The damaged sustained by Hurricane Ivan will obviously take years to correct.  Tim Skelly Cason also said "� after Hurricane Opal, parts of highway 98 were impassable for weeks.  Now, Hurricane Ivan has re-opened the wounds left by Opal and is a stark reminder of the power of mother nature's fury!"

Tim Skelly Cason, former bassist of the band Cripple Need Cane also went on to say,

"People in California and other parts of the nation that don't have experience with hurricanes have no idea how it all happens.  The worst part is the water surge up from the Gulf of Mexico.  This �storm surge' brings excessive high-tides and waves about 10 times their normal size, and in a place that gets 2 foot waves on average, a 10 to 15 foot wave on top of an already high tide, causes extreme changes to

the coastline and any structures in it's path."
Tim Skelly Cason, will be appearing in New York City at the Bass Player Live event sponsored by Bass Player Magazine, Saturday and Sunday, October 16 and 17 to demonstrate products for Roland, the largest musical instrument manufacturer in the world. During his stay in Manhattan he will use short wave radio to communicate to his companions. Tim Skelly Cason is an electronics engineer as well and went on to say,
"After 911, (September 11th,) I'll be a lot more prone to carry a short wave walkie-talkie when I'm in the city. I'm glad we have this old technology to fall back on. It's in many ways superior to all the hype and hoopla of modern digital communication devices."
You can read more from Tim Skelly Cason, former Bassist for the band Cripple Need Cane, at http://www.timcason.com

Not directly from an XM receiver, because there are no data transmitting circuits.

Unless you are in a major market with huge numbers, dominate the market I would think you're very lucky to have a contract in the radio business today.

In a personal service contract what is expected of you,time on air, sales calls, recorded spots on other shows , personal appearances what you expect from the company, salary, vacation time, health plan...your escape clause, their escape clause, how they will promote you etc....maybe a car, or gas card, expense account to mingle with clients..and what ever you can think of but you must know how far they will go. The way I did it even though Wm Morris agency represented me, I did my own contract all the years I worked at KMPC, in LA. The mistake many make asking for $25,000 increase and finish up with $5500.00. I would ask for say 25,000.00 increase and gave them every reason why I should get that much, how much money I bring into the station, when you come up with the numbers, they usually reply...how do you know that? Well I can read the rate card, I'm a business man and have a pretty good idea about the business on the station, etc, etc....Didn't mean to write novel..hope I helped.....roger carroll

I don't see how XM can know what channel you are listening to, unless you
tell them. Receivers do not transmit data anywhere, and they are not
connected to a phone line.

XM would know if you are interested in a premium channel because you are
subscribed to it.

"Doug McDonald" <mcdonald@scs.uiuc.edu> wrote in message news:cjafop$p2k$1@xuxa.iecc.com...
>
> Actually, as I quoted from a scientific study, I am
> correct.

That study is, to put it politely, bunk. First, there was absolutely no attempt to measure whether Congress is really a good reflection of the views of the American public. (And no, it's not self-evident just because "we elected them".) Second, there was no attempt to show that the rate of quoting publications of think tanks is a valid or useful measure of the political views of members of Congress, or of the media. And those are just the first two fundamental flaws that could be noticed right away.

A "scientific" study should account for all such things, or not try to make claims about something that it is not measuring -- a real scientific paper would have only been titled "A Comparison of Quotation Rates from Think Tanks Between Congress and Major Media", wouldn't have editorialized about its results, and wouldn't have claimed to have greater meaning than it really did. Such a paper would also be peer reviewed before publication, which this paper was not. In addition, any true scientific study would not be widely accepted as fact until it had been even further reviewed, all experiments re-run by other researchers for confirmation, parallel experiments and data collection done to corroborate from different angles, and thoroughly gone over and re-tested and re-analyzed until its results were considered ironclad. At this point, the paper in question is nothing but opinion with some selected statistics to back it up, and you know what they say about statistics...

Even if it does say something about the relative positions of the news media to Congress in terms of quotation rates from think tanks, it is just as likely saying something about how conservative Congress is as about how liberal the media is.

But I think it is mainly saying that right-wing think tanks are quoted a lot precisely because they are nothing but influence organizations. Traditional think tanks (like Brookings and Rand) primarily existed to do research. Modern Republican think tanks (like Heritage, American Enterprise, and Cato), exist to further a conservative political view, and to publicize and promote that view. They generally spend more on PR than they do on research, so it's no surprise they have a lot of visibility (as that's the entire purpose of PR).

You may be right that progressivism is more concentrated near the coasts, but an awful lot of people live in those areas. There are 70 times as many people in California as in Wyoming, for instance, and almost 8 times as many as in Alabama.

By that logic, then, a cool day on Venus would be somewhere around 350C, rather
than
400C.

You can't measure the centre based on the average of a pre-selected group.
Left/right, when considering politics, can be easily determined in a vacuum if you
look at the policies and values of each group.  Conservatives view the world as
entirely self-actuated, self-rewarded and assumed risk at the individual level.
Facism extends this concept to business, where the relationship between government
and business is distinctly favoured over individual rights.  Socialists and, going
further, communists (and not the Soviet kind) view the world as mutually-actuated,
mutually-shared rewards and mutually-shared risk.  By that measure, Congress is
distinctly conservative, FOX News is clearly right-wing, and we're all going to
hell.

CBS, as is the case for all legitimate news organisations, is better at covering a
story with balance and provides opportunities to hear opposing views.  FOX
exhibits
no such behaviour.  And Steve is right.

Note - Scottmuni.com does not have the story yet but it has audio clips.

http://1010wins.com/topstories/winstopstories_story_273123427.html

Sep 29, 2004 12:28 pm US/Eastern
(1010 WINS) (NEW YORK) Disc Jockey and radio personality Scott Muni has died. He was 74. The announcement was made by Clear Channel Radio - which owns Q-104 FM where Muni worked most recently.

Muni began in New York City radio on WMCA in the late 1950s as one of the "Good Guys" in the competitive Top 40 radio wars. In 1960 he brought his gravelly voice to WABC for four years and then he was heard on WOR.

But he realized his biggest following on WNEW-FM radio, which played alternative rock music and introduced many of the new rock groups to the public.

He worked at WNEW-FM from late 1967 to 1998.

I don't know whether I'm asking for something you folks consider industry trade secrets, but could somebody explain to me how that big, boomy, bright, full "radio sound" is achieved?

My ears love uncompressed music as much as the next audiophile's, but under some circumstances, like while driving and listening to my compilation CD-Rs, FM radio-style compression is preferable. Moreover, some tracks simply sound magical with that compressed, booming radio sound -- think "Cruisin'" by Smokey Robinson.  :-)

So, sitting in the company of CEP 2.0's hard limiter and dynamics processing functions here at home, I'm wondering if that kind of sound can be duplicated, or at least closely immitated, in my livingroom.

It should be stated that while I've never set foot inside a real radio studio, I have a fair understanding of how this processing works from lots of reading and a technically-oriented mind.  I.e., what compression/expansion do as opposed to hard limiting, how thresholds and ratios and compensation gain relate to them, the roles attack, release, and lookahead times play in affecting the punchyness in the output, the fact that everything above happens independently yet simultaneously to different frequency ranges (multi-band compression) which partly overlap (crossover?), etc. I just lack the expertise and experience real engineers have to make all those things work in harmony to produce a true "radio" sound without breathing and pumping.  <g>  That's why I'm here.

At <http://www.snpp.com/staff/brian/drc/>, I've uploaded a few GIFs showing the DRP options offered by CEP 2.0.  While genuine multi-band DRP is not possible in this program, it does permit you to define the low and high frequency cutoffs for each DRP action.  Theoretically, then, it should be possible for me to achieve "multi-band" compression by performing DRP in multiple passes, once for each band.

Anyone have any hints on where I might start?  Like tips on what compression/expansion ratios, thresholds, compensation/output/input gains, and attack/release/lookahead times are best applied to each band, etc., if I could achieve something like the sound that well-engineered classic rock/oldies/pop/new age stations exhibit (big, booming, and larger than life -- but not *totally* dead dynamically, like soft rock stations engineered to be heard through alarm clock radios)?  Of course, I realize that beggars can't be choosy.  :-)

I'd really appreciate any pointers this group might have.

P.S. - Something I'm vastly ignorant of is where the low & high
cutoff points fall for each band in the multi-band compressors
used by most stations -- as well as how MANY bands they usually
have to begin with, and by how many Hz/kHz they usually overlap
(crossover?).  Info here would likewise be very much appreciated.

Brian

Bob Haberkost wrote:

> CBS, as is the case for all legitimate news organisations, is better at covering a
> story with balance and provides opportunities to hear opposing views.

You are joking. CBS NEVER presents the conservative point of view. It ALWAYS treats subjects from the left wing viewpoint. It is true that very occasionally they ask a conservative to utter words ... but they actually treat the news and also "features" from a left wing viewpoint. They do NOT cover stories with balance.

If you think they do, you are a severe liberal.

You cannot be a balanced news organization without covering stories that are interesting and held close to the heart of conservatives, such as the right to life for unborn children, treating them as being the right side. CBS may talk about right wing subjects ... BUT THEY ASSUME THAT THE LEFT WING POSITION ON THE ISSUE IS THE CORRECT ONE.

And have you EVER heard CBS breaking a big story attacking Kerry with forged documents?

Doug McDonald

You can't forget the classic:

Anchor: K-Y-W newstime...
FX: BOOP
Anchor: ...XXX o'clock.
Stentorian Announcer Voice: All news, all the time.
Jingle singers: K-Y-W, Newsradio, 10-60
S.A.V.: From Independence Mall, this is News Radio, K-Y-W Philadelphia,
10-60 on your dial, a Group W Westinghouse Broadcasting
Station, serving Pennsylvania, New Jersey, and Delaware, in
A-M stereo.

<http://audio.bostonradio.org/98caaabd-b353-11d8-9fd3-00904703287b.ogg>

IIRC, Mr. Stentorian Announcer Voice, the long-time imaging voice of KYW radio and television, died this year.  Not quite Jim Clancy, but great pipes nonetheless.

All of the WINS IDs I've heard (in the modern era, anyway) were read by the outgoing news anchor.  In market #1 the station which had the most presence in its legal ID was WCBS, as witness <http://audio.bostonradio.org/1ad39f32-af7f-11d8-9fd3-00904703287b.ogg>. (Other CBS all-newsers of the mid-90s tended to jingle.)

Unfortunately most all-news and news-talk stations these days seem to think it's "undignified" to jingle, although I'm told KFBK in Sacramento (<http://audio.bostonradio.org/8d336817-aecb-11d8-9fd3-00904703287b.ogg>, recorded in 1997) is still an exception, as is Milwaukee's heritage WTMJ:
<http://audio.bostonradio.org/151300c9-d2fb-11d8-b318-00904703287b.ogg>.

One of my current AM favorites (in no small part because the jock is a friend of mine) is this one from suburban Pittsburgh:

<http://audio.bostonradio.org/5e05f288-0f32-11d9-8341-00904703287b.ogg>

Other AM IDs I like:

WGAN: <http://audio.bostonradio.org/a725990d-b9b8-11d8-a5c8-00a0cc584130.ogg>

You know, I think I might still have a dub of the jingle package that KDKA ran in
that period.  Or was it the electronic one in the several years before?  Not that
you'd know...just muttering to myself.  I may even have the 15ips master for the
electronic set, having dubbed it also before I took them both, as I didn't have a
15ips reproducer at home.  I'm remembering jock shouts, too.

I'll have to look.  I'd imagine that there would be a few people here who would be
interested in what I find.  Nostalgia, however, isn't what it used to be.

> You are naive enough to believe that Congress is a good reflection of the
> real world?
```

>
> In the "real world", the large majority of the population disagrees with actual Republican policies in virtually every area, when they are each taken in isolation and stripped of rhetoric: universal health care, abortion, welfare, taxes, gun control, separation of church and state, education, drugs and crime, media ownership, environment, labor relations, workplace safety, civil rights, corporate accounting abuses, etc. But the right wing have become masters of deception and framing the issues in such a way that their bad positions are made to look good and their opponents are forced to debate on their terms. Continual mudslinging and misdirection of blame onto their opponents only helps their cause.
>
> They also have their own right-wing "news" outlet in Fox, which doesn't bother with fact checking or even trying to tell the truth, freely mixes editorializing with "reporting", gives no time at all to balancing progressive points of view, and generally plays out the Republican leadership's philosophy that politics is war, to be won at any cost (get all the spoils and kill your opponents). There is nothing in the current Republican philosophy about building a better world or country, about benefitting the population as a whole, about accommodating different points of view, or about reasoned debate about policies. It is all about winning: disparaging and degrading your opponents and discrediting them and their points of view. Then you can get all the spoils.
>
> And the mainstream media have played along: despite being "liberal" (if that's really the case: a 1998 study showed that the Washington press corps, at least, were more conservative than the general public on issues such as trade, taxes, Social Security, health care and corporate power, and the majority of newspapers have endorsed Republican candidates in virtually every election this century), individual reporters have been unable to provide accurate and meaningful information in the face of this propoganda blitz, largely as a result of their rules of proper journalism: since most of what Bush and his cronies say has a tiny grain of truth mixed with subjective opinion and gross exaggeration, they can't be called the liars they so clearly are (it's also not in the nature of journalists to make such accusations: rather, they try to present the facts and let the reader or viewer decide for him or herself; the Republicans know this very well). All journalists can do is put such statements up against what Kerry (or whoever) says in return, and hope the reader can judge. But with all the noise, misdirection, deception, outright lies, continual repetitions of untruths, accusations, and false impressions, it's difficult for anyone to tell what's true or not, and at best they may come away confused and not knowing whom to believe. See: http://www.fair.org/press-releases/swift-boat.html
>
> Also, due to the massive, well funded and organized letter/email/phone/fax attacks the stations or papers receive any time anyone says or writes something not quite conservative enough, they've been cowed into taking a right-of-center view much of the time. (Not all of the time, but moreso than they would naturally.)
>
> Even when they can do meaningful reporting, it often gets drowned out. See:
> http://www.fair.org/press-releases/cbs-bush-documents.html
>

> Another reason reporting glosses over many issues is that the media is far more concentrated now than it used to be, and owned by major corporations. This is something that's happened without most people being aware of: most media in the U.S. are now owned by a small number of major corporations, due to relaxations in media ownership rules by the likes of Michael Powell (but starting many years earlier). Clearly there are many potential conflicts of interest when, for instance, NBC covers news about GE, ABC about Disney, or CBS about Viacom. (see http://www.fair.org/extra/best-of-extra/ge-boycott.html for one old example. There are plenty more, and the situation is certainly not getting better.) But in addition, large corporate media are concerned about keeping large corporate advertisers happy, and also about keeping the recipients of large political donations happy so that policies will move in the direction of unrestrained profit-making. "News" is really about profit, by way of being entertaining enough to hook an audience and hence major advertisers. None of this creates an atmosphere conducive to reasoned and penetrating reporting in the best interest of U.S. citizens.

What a nice little diversion in abstracts.  How about looking at the real example.  Dan Rather was already under the glare of international spotlights after it was apparent to everyone that his newly discovered documents were very likely forged. If not forged, it was unquestionable that they received very little proper scrutiny, nor did the source of the documents.  So, what does he do?  How does he then try to correct this error?   He goes back on 60 mins again claiming the story is true, even if the documents are false.  He brings out the 84 year old former air national guard secretary that worked for Bush's now deceased superior officer, with her 30+ year old recollection of events.  One of the very first questions he then asks is if she believed President Bush got into the ANG through influence.  She answers "Yes, I do.  I've always felt that way."   End of questioning by Rather.  No follow up.  Even a junior reporter from a third rate paper interested in the truth would have asked "What do you base that on?  What evidence did you see?"  Better than that, they never would ask a question about how she "feels", they would have asked for facts. This is a prime and current example of the bias at CBS.  And, in this case, already being under intense scrutiny, no one can claim it was a mere oversight.

Then, we have the fact that CBS called the Kerry campaign and requested they contact the 60 mins source for the forged documents. Joe Lockhart admits he was contacted and then did talk to the guy. This is unbiased journalism?

And of course, if CBS wanted a fair presentation in either this or the original 60 mins story, they had plenty of opposing witnesses available to be heard.  The wife and son of Bush's supperior officer both have said they know what he had said to them about Bush, and it was all favorable.  Yet, we didn't hear from either them or any other source with opposing information.

As for FOX being so right wing, I believe the previous poster is correct. They are a lot closer to the mainstream American than Dan Rather, Michael Moore, or George Soros. And that explains why they are thriving and the attempts at liberal shows just went by the wayside. Anyone remember how long Phil Donohue lasted with his show on MSNBC?

The only question left is how long until they fire Dan Rather. With ratings impacted, CBS must be left wondering who will be left watching Rather's coverage of election night. I wouldn't be surprised to see CBS tell him they won't let him cover it, which would also be a convenient way to get him to quit.

Has anyone ever offered CBS forged documents which attack Kerry? CBS does in
fact air GOP sponsored commercials which are full of forged interpretations
of Kerry's politics.

Yes, RDS uses an inaudible subcarrier, but it doesn't affect your ability to hear the normal program audio.

A data signal at 57KHz is mixed with the station's normal music/voice program. Both signals are broadcast at the same time.

At the receiver, filters prevent the 57KHz RDS data signal from reaching the speakers. (even if they didn't, you can't hear 57KHz) If the receiver supports RDS, another filter prevents the music/voice program from reaching the RDS decoder.

=====

Here in the USA, RDS is generally used to display the name of the station on the front of the radio, so that the listener always knows what station they're tuned to.  RDS will also often display the name of the song the station is broadcasting and who's singing it.

There are other things RDS *can* do.  It can tell your radio alternative frequencies - if a station has multiple transmitters, you can automatically select the strongest signal.  It can automatically tune your radio to a station that's broadcasting emergency information. These applications are not common in the USA but I understand they are common in Europe.

RDS is modulated onto a 57Khz ubcarrier and has a bandwidth of about 2.5Khz - can you hear 54Khz (Not very likely)?
This signal is then added to the MPX stereo signal before feeding the

transmitter.

I have a software based stereo and RDS encoder on my website (needs Linux, Jack, liblo & a compatable 192Khz soundcard). The source is there so grab a CVS client and feel free to study it.

"Chet Hayes" <trader4@optonline.net> wrote in message news:cjighe$t23$1@xuxa.iecc.com...

> What a nice little diversion in abstracts.  How about looking at the real example.  Dan Rather was already under the glare of international spotlights after it was apparent to everyone that his newly discovered documents were very likely forged. If not forged, it was unquestionable that they received very little proper scrutiny, nor did the source of the documents.  So, what does he do?  How does he then try to correct this error?   He goes back on 60 mins again claiming the story is true, even if the documents are false.

He had a good point. They had plenty of other evidence to base a story on, and they weren't the only ones. Unfortunately, the Republicans have managed to, once again, to distract attention from the real issue: that Bush inappropriately pulled strings to get into the National Guard ahead of hundreds, if not thousands, of other candidates, that Bush inappropriately managed to get assigned to a base with no aircraft or flight personnel so he could work on a political campaign instead of serving his country, that Bush refuesed a direct order to take a physical exam (which, for the first time, included a drug test that would have detected the cocaine use he was appearantly arrested for in 1974, about which not only are there strong, if so far unsubstantiated, rumors, but also something that Bush to this day refuses to comment on, though he freely claims he hasn't used drugs AFTER 1974; plus, Bush had already lied publicly when he claimed he hadn't been arrested since 1968, though it was later discovered he'd been arrested for drunk driving in Maine; his highly-unusual move as Texas governor to change his driver's license number and have all the records relating to the old one destroyed may for all time erase the evidence trail needed to prove other legal difficulties in Texas, but he didn't have such pull in Maine), resulting in his grounding and failure to report for duty until he managed to get an early discharge before his next scheduled physical was due.

There is more than enough evidence to strongly confirm all, or nearly all, of the above. Why is CBS's making use of one document (among many), that appears to be a reconstruction of the contents of a document that was likely intentionally destroyed by Bush staffers in an effort to cover up the information it contained, a more important story than the true story of Bush's service record? I am by no means condoning CBS for making use of this document without clearly labelling it as a reconstruction of the content of another document that is NOT in their posession, but is that really one of the most important issues in America right now? I mean, we have lost well over a thousand soldiers in Iraq and Afghanistan, both places with a security and economic situation that is worsening, not improving. We are fighting terrorism, but the Bush administration has dragged their heels to even implement the program the Clinton administration already had in place (the financial controls, bombing and special forces in Afghanistan, arresting known terrorist cells, etc. rollback of Al Qaida that happened after 9/11, which was presented to Condi Rice et al during the transition along with the admonition that terrorism, and Al Qaida in particular, would be their most pressing national security issue, then promptly filed away), as well as helping the terrorists in their recruiting efforts with the ill-advised Iraq war and its heavy-handed and poorly planned follow-up, AND protecting the Saudi Arabian government and royalty (including spiriting many of them out of the country despite no-fly rules and without questioning, in the days after 9/11), which have funded and supported the terrorists and their message and who were in fact aware that a major attack was scheduled to occur on American soil on September 11, due to the lucrative oil relationship that exists between the Saudis and the Republican aristocracy. We have pissed away the budget surplus we worked so hard to build over the previous decade, increased the already-bad income inequality that exists in our country, cut funding for every worthwhile program imaginable (so that the rich could get even more tax breaks), and curtailed our citizens' civil liberties (while allowing corporations to run roughshod over the helpless populace), we are far less trusted and liked around the world than at any time in history, and the Bush administration has lied about all of it from beginning to end. So, as we now approach an election to determine the world's most powerful man and whether to make all of these things far worse or to start trying to make them better, and all people can talk about is whether Dan Rather should be fired over one lousy questionable document (questionable, even though its contents appear to be true and accurate)???

> And of course, if CBS wanted a fair presentation in either this or the original 60 mins story, they had plenty of opposing witnesses available to be heard.  The wife and son of Bush's supperior officer both have said they know what he had said to them about Bush, and it was all favorable.  Yet, we didn't hear from either them or any other source with opposing information.

When was the last time you heard the family members or neighbors of a serial murderer say "but he's always been such a nice guy, I can't IMAGINE him ever doing such a thing"?

> As for FOX being so right wing, I believe the previous poster is correct.  They are a lot closer to the mainstream American than Dan Rather, Michael Moore, or George Soros.

I'm not sure how to put this in language simple enough for you to understand, but I'll try: you are wrong. There is copious evidence to show that the mainstream media is most likely more CONSERVATIVE than the general public, not more liberal (including the evidence that is so frequently mis-quoted by conservatives to "prove" that journalists are more liberal than the general public: that 18-year old data did indeed show that reporters were more liberal -- on social issues, but they were more conservative on economic and other issues. Furthermore, the editors and owners of the media turn out to be far more conservative than the reporters themselves).

> And that explains why they are thriving and the attempts at liberal shows just went by the wayside.  Anyone remember how long Phil Donohue lasted with his show on MSNBC?
>
> The only question left is how long until they fire Dan Rather.  With ratings impacted, CBS must be left wondering who will be left watching Rather's coverage of election night.  I wouldn't be surprised to see

> CBS tell him they won't let him cover it, which would also be a
> convenient way to get him to quit.

You've hit the nail right on the head: there is virtually no actual, (relatively) impartial, informative news reporting on TV anymore: it's all just entertainment to get ratings (and hence advertising dollars). It turns out that insultingly angry right-wing shouting about sex and other scandals is more entertaining to the average couch potato than reasoned debate about real issues, or liberal moaning about such inconsequentials as the environment, poverty, education, or whatever other silly thing they're moaning about (so Jerry Springer is more popular than C-SPAN; what does that prove?). Conservatives have learned how to put on a good show and keep an audience hooked.

Fri, Oct. 01, 2004
Associated Press

Fortuna, Calif. - Jean Ruth Hay, who woke millions of American troops each morning during World War II with her upbeat radio program "Reveille With Beverly," which was broadcast into foxholes, cockpits and military outposts from Alaska to New Zealand, has died. She was 87.

Hay, a resident of Fortuna, a small community on the Eel River in Northern California, died Sept. 18 after suffering a stroke while gardening, her son Bob said.

"She was a really strong, fascinating woman," Bob, 50, said. "To do everything she did in a lifetime is amazing ... and she did it all at a time when women weren't usually in the spotlight."

Between 1941 and 1944, Hay's dawn broadcast as the effervescent Beverly reached an estimated 11 million people. Her jumpin', jivin' selections - Benny Goodman, Artie Shaw, Duke Ellington and Nat King Cole - were a welcome alternative to the 5:30 a.m. bugler's blast that jarred American troops from their beds in military outposts across the globe.

With a cold Coca-Cola in one hand and a stack of records in the other, Hay's day at Hollywood's station KNX-AM began with her signature opening, "Hi there, boys of the USA."

"We're ready with the stuff that makes you swing and sway," she would croon.

Called the world's first global disc jockey, her programs reached servicemen in 54 countries. Some saw her as the American counterbalance to the Pacific theater's "Tokyo Rose," who was actually an amalgam of several young women in Japan airing anti-American propaganda.

Hay posed for pinup shots and was voted by troops, "The girl we'd most like to be trapped in the turret of a B-17 with."

Born in Philadelphia, Hay got her start in radio in 1941. The University of Colorado graduate had heard soldiers at Fort Logan complain of starting their days to the blast of a bugle.

As she told the story, she went to the manager of Denver radio station KFEL and pitched her idea to "let the guys police their barracks to the beat of the band of the king of swing" - with her as disc jockey. She called herself Beverly because it "sort of rhymed" with reveille.

Her morning show debuted on Oct. 20, 1941 and was an immediate success.

After being featured in Time and Life magazines in 1942, she was offered a job in Hollywood at a CBS affiliate. Armed Forces Radio Service broadcast her show overseas after America entered the war, along with a shorter program she hosted called "GI Jive."

Years later, Hay learned that her broadcasts were occasionally used to transmit coded secret information, she said on her Web site. She said she was ordered at times "from on high" to read introductions word-for-word and announce obscure songs such as "Opening Night," "Torpedo Junction" and "I Dug a Ditch."

She married bandleader Freddie Slack in 1945, then divorced three years later. She later married John Hay. She worked after the war with the Santa Barbara-based Direct Relief International, a charity for which she served as chairman and board member.

Hay is survived by her husband of 52 years, three children and a grandson.

Amateur Radio Newsline™ Report 1416   October 1, 2004

Amateur Radio Newsline report number 1416 with a release date of Friday, October 1, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T.  Ham radio is ready as Hurricane Jeanne hit Florida.  Find out the details on Amateur Radio Newsline report number 1416 coming your way right now.

(Billboard Cart Here)

**

## RESCUE RADIO:  HAM RADIO MEETS HURRICANE JEANNE

Making landfall near Stuart, Florida, early on Sunday, September 26th, Hurricane Jeanne blew across that state with 120 mph wind and drenching rain.  News reports say that the storm hurled debris into the air, tore rooftops off buildings and sent monster waves onto the shoreline.  And as Jeanne's wrath played out on television screens across the nation, it was the calm voices of ham radio operators of the Voice Over I-P Hurricane Watch Net that signaled it was about to arrive:

--

"At 11 PM, the center of Hurricane Jeanne was located near Latitude 27.2 North and Longitude 80 West, or about 15 miles East of Stuart Florida.  Jeanne is moving slightly North of West near 13 Miles Per Hour."

--

Hams also relayed a stark warning from the National Hurricane Center.  One that said -- stay out of Jeanne's way:

--

"...with maximum sustained winds of 115 MPH with higher gusts, Hurricane Jeanne is a is a dangerous Catagory 3 hurricane on the Saffer-Simpson Hurricane Scale."

--

Over two million residents had been urged to evacuate.  State officials said more than 42,500 stayed at shelters.  Many of these were staffed by ham radio operators associated with A-R-E-S and RACES groups.

As Jeanne made her way across Florida, many residents were without telephone service and more than a million people lost power.  But ham radio operators using all kinds of emergency power sources were on the air.  In fact they were the ones who relayed word of some of the major outages:

--

"KA4EPS in Deerfield Beach passing on some information you might be interested in. Have some numbers passed along by the local utility company. Dade County has 2900 without power. Broward County 71,000 and Palm Beach County 487,000 without power."

"QSL Lou, Thanks."

--

The Category 3 storm became the fourth hurricane to pummel Florida in a single season. The three other hurricanes - Charley, Frances and Ivan - have all hit within the last six weeks. And hams like Paul Goodell, KG4GOQ, in the town of Lake Worth might not have sounded that great through all of the radio links, but he did get the word out:

--

"Estimated winds in excess of 100 miles per hour. Trees bent and laying over."

--

Then for a while there was a period of calm. This as the eye of the storm came ashore. It gave first responders a chance to assess the damage done so far:

--

"KG4YQK at the Port St. Lucie E-O-C W4SLC. We are in the eye of the storm presently. We had sustained winds of well over 110 miles an hour. We received substantial damage here locally. Trees down. Powerlines down. Flooding as well."

hurricanes. As it did, even public service communications took a hit:
--

"Net control is listening. Go ahead Paul:

"I just heard second han that the communications tower for Riviera Beach has collapsed. Probably not something for the national hurricane Center, but just as a note to anyone else out there listening to hear how bad these winds are going."

--

By late morning, Jeanne had weakened to a Category 1 storm with 75-mph top sustained winds, but its 400-mile diameter covered most of the central part of the state including Tampa and Orlando. As Jeanne proceeded to fall apart while heading North-East over Georgia and the Carolina's she dumped torrential rain and spawned close to a dozen twisters. More on the aftermath of Hurricane Jean in future Amateur Radio Newsline reports. (ARNewsline(tm) with audio from the VoIP Hurricane Watch Net)

**

## THE BPL FIGHT: PERTH INTERFERENCE NOT BPL RELATED

A widespread interference problem in Perth, Australia, that sounds like B-P-L has to be something else. This, after the city's Power Authority tells Dennis Muldownie, VK6KAD, that it is not using Broadband Over Powerline technology to monitor its electrical network.

There is now some supposition that noise that wiping out free to air TV channels 2, 7, 9 and 10 may be coming from some home network gear which uses the power mains to connect the various pieces in a home Local Area Network. But the noise is so widespread that it has to be more than one installation causing the problem. This, by radiating back out over the local Perth power grid. (WIA News)

**

## THE BPL FIGHT: FCC TO RELEASE R&O ON BPL ROLLOUT

Meanwhile, back at home the ARRL says that an initial Report and Order on the rollout of B-P-L could be on its way out of the FCC this month. Amateur Radio Newsline's Mark Abramowicz, NT3V, has been following the story and has more:

--

The ARRL says that an initial Report and Order on the rollout of B-P-L could be on its way out of the FCC this month. Amateur Radio Newsline's Mark Abramowicz, NT3V has been following the story and has more…

As predicted almost on cue, the Federal Communications Commission appears ready to render its decision on Broadband Over Powerline Internet access.

And despite thousands of comments on the subject, many of them raising concerns about the interference potential of the technology, the ARRL says it has learned the panel is ready to act.

As one high-ranking ARRL official has told Amateur Radio Newsline, it's not a question of whether there will be BPL. There will. The question is in what form will it be rolled out and how effective will the safeguards be to protect other services.

In its recent bulletin, the ARRL advised it had learned the FCC's Office of Engineering and Technology would have its draft order on BPL ready for the commission's Oct. 14 meeting.

The ARRL has mounted a vigorous information campaign to raise awareness about the threat BPL poses. And, it has also tried to lobby at various levels to change some minds about the benefits the BPL industry says the technology will bring.

But it appears, based on the ARRL's BPL bulletin, that the organization is pessimistic about what will be coming out of the FCC's technology arm.

In fact, the ARRL's Chief Executive Officer David Sumner, K1ZZ, in a letter sent as a follow-up to a recent meeting with FCC commissioner Jonathan Adelstein sums up what the League is expecting.

"…the ARRL has no confidence that the draft report and order will be based on sound engineering and believes the rush to adoption is unwarranted and premature. " That excerpt of Sumner's letter from the

ARRL's Bulletin.

In interviews with Amateur Radio Newsline, ARRL President Jim Haynie W5JBP says there was little doubt in his mind the issue would be decided BEFORE the presidential election. Haynie contends the issue is being driven by business interests who have the ear of the president and his technology advisors.

Haynie has told Amateur Radio Newsline of his concerns about the FCC's apparent lack of interest in following up on the many pending BPL complaints - filed as a result of system tests. He has told us he fears when the commission finally acts, it may bow to BPL interests that are seeking to weaken the impact of any interference complaints.

So the question many amateurs may be asking themselves as we await the FCC's order is where will this leave me? Is it time to put my radios up on Ebay and turn my focus to my computer and EchoLink?

The answer: Not so fast!

The National Telecommunications and Information Administration still has a card or two to play. Its technical people have raised interference issues and are continuing studies and plan to release more results in the next several months.

Will the FCC wait for the NTIA? Will the FCC table BPL? Not likely to both. Is there room for an appeal of any FCC BPL decision? If so, it would likely wind up tied up in the federal courts.

With the planned rollout out of Wireless Internet access here in Philadelphia and other cities across the nation, do the economics dictate a utility recovering its investment in BPL technology at a pace investors are willing to wait?

The questions are many and the debate is likely to continue for the next several days.

>From our perspective, it seems unlikely the FCC decision - if it goes against amateur radio interests - will stand without a challenge. Too much time and talent has been invested in preparing the data showing what BPL can do to the amateur frequencies and our ability to operate.

We'll stay on top of it for you. And, once the FCC order arrives, we'll have the first reaction and what it will mean to you.

Stay tuned!

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

More on the B-P-L issue in future Amateur Radio Newsline reports. (ARNewsline(tm, ARRL)

(5 sec pause here)

**

THE BPL FIGHT:  BPL COMES TO CENTRAL VIRGINIA

Still with news on the B-P-L front, Charles Rivelle, K3FT, has some news about one electric company's future.  He says over QRZ.com that the Central Virginia Electric Cooperative has completed testing of its B-P-L system in Nelson County and the company is now serving customers on 40 miles of operational lines.

The K3FT posting provides a link to a two-page advertisement that has been sent to thousands of customers throughout central Virginia.  The ad alerts them to look forward to B-P-L service in the area noting that line crews are now installing the equipment needed to deliver Broadband over Powerline services. Up to 4000 homes and businesses will be eligible to participate in the first phase of this program. Central Virginia Electric Cooperative says its "always on" 256 kilobaud per second broadband connection is priced at a very competitive $29.95 a month.

Check this web site for details: http://www.forcvec.com/bplcoop/ (K3FT via QRZ.COM)

**

## THE INTERNET: US FALLING BEHIND IN BROADBAND ROLLOUT

Meantime, the FCC insists that the United States is making progress in rolling out high-speed Internet service. This, despite facts showing that the nation is falling further behind other countries.

A new Federal Communications Commission report found that U.S. high-speed Internet lines had tripled to 28.2 million by the end of 2003 from June 2001, but the country at best was 10th place in international rankings down from fourth, lagging nations like Canada and South Korea.

FCC Commissioner Michael Copps criticized his own agency over the disappointing news. He says that the agency had failed to establish a coherent policy for broadband, sacrificing the nation's rank. Copps also noted that service was as cheap as $10 a month in Japan for 8 megabits a second versus $30-$50 for 1-3 megabits in the United States. (Published news reports)

**

## CHANGING OF THE GUARD: STAN BURGHARDT, W0IT - S.K.

The changing of the guard in ham radio continues with word of the passing of two well known radio amateurs. The ARRL Letter reports that Stan Burghardt, W0IT of Watertown, South Dakota, died on August 22nd at age 93. Burghardt was the founder of Burghardt Radio Supply Inc. which is now known as the Burghardt Amateur Center. He was first licensed in 1931 as W9BJV and became W0BJV in 1946. Burghardt remained active on the air -- especially on 6 meters -- until his death. (ARRL)

**

## CHANGING OF THE GUARD: ROGER BAKER, G4IDE - S.K.

And ham radio software writer Roger Barker, G4IDE, has passed away. Baker  died on September 9th following a long bout with cancer. Baker was the author of UI View, PSK31SRV and a host of other digital mode software and was recently named as the first recipient of the  'Lifetime Achievement Award' by the Tucson Amateur Packet Radio for his services to digital communications.

Baker's packet radio program Winpack is currently in use by tens of thousands of radio amateurs around the world, while his UI View program is now considered to be the benchmark by which all other APRS Raster Mapping software is compared. (KB7TBT, G3ZHI, others)

ENFORCEMENT:  KEEP OFF 10 METERS

The FCC has written to five trucking and transport companies warning them to keep their drivers from operating radio gear on 10 meters.

The letters went to Con Way CWX Trucking of Long Beach, California; Dowell Express, Inc. of Lavonia, Georgia; K & K Cartage, Inc. in Sunbury, Pennsylvania; Teeberry Trucking LLC whose home base is Charlotte, North Carolina and United Van Lines of Fenton, Missouri. Divers for these companies were heard operating radio gear without licenses on 28.085, 28.115 and 28.215 MHz

Each letter carries a stern warning that continued operation could lead to confiscation of the radio gear as well as a prison term and a hefty fine and for the unlicensed radio operator.  These monetary forfeitures normally range from $7,500 to $10,000.  (FCC)

**

ENFORCEMENT:  A DEAL A PIRATE COULD'T REFUSE

And there appears to be two ways to get someone to stop rebroacasting your radio station.  You can complain to the FCC or you can take another and apparently much quicker route that one station has.  Norm Seeley, KI7UP, explains the unique and effective approach:

--

An unlicensed broadcaster is off the air in San Diegio, California. This, after a licensed broadcaster in San Clemente kind of took matters into its own hands and made the pirate a deal he could not refuse. Legally speaking that is.

When KWVE was recently advised that its signal was being rebroadcast by apparently unauthorized translator station in Lakeside, California, the station dcided to act. Rather than wait for the FCC to investigate and politely ask the pirate to cease and desist, representatives of KWVE paid the party a visit. The station also threatened in writing to seek legal injunction if the unauthorized rebroadcasts continued.

And you can call this approach as being very effective. The translator fell silent in short order and has not been heard since.

--

While this system is seemingly a lot faster it also means having to hire a lawyer and pay his fee. (CGC)

RESCUE RADIO: FCC PARTICIPATES IN COUNCIL ON EMERGENCY PREPAREDNESS AND INDIVIDUALS WITH DISABILITIES

The FCC has participated in the first meeting of the Interagency Coordinating Council on Emergency Preparedness and Individuals with Disabilities. This, at the Department of Homeland Security in Washington D.C..

The FCC was represented by K. Dane Snowden, the chief of the FCC's Consumer & Governmental Affairs Bureau. At the meeting, Snowden announced that the FCC has issued policies and will launch outreach efforts. This, to ensure that facilities that provide telecommunications relay services for persons with hearing and speech disabilities are designated priority for restoration of service in cases of emergency. Snowden also described a rulemaking by the FCC to improve the emergency alert system to make it more accessible for people with disabilities.

The Interagency Coordinating Council on Emergency Preparedness and Individuals with Disabilities was established by Executive Order on July 22nd.  Its purpose is to address the safety and security needs of people with disabilities.  (FCC)

HAM RADIO ON THE INTERNET: BIG DATABASE UPGRADE AT QRZ.COM

The QRZ.com website call sign system is running a lot faster these. This as the result of a major an upgrade to a new and more powerful server.

The new database engine is a Sun E280R.  This is a 64-bit industrial strength machine with dual 900 MHz processors, 4 GB of RAM, and a pair of 36 gigabyte 10,000 R-P-M Fibre channel disk drives.

Fred Lloyd who runs QRZ.com says that these new disks are really impressive.  Fred says that he has clocked them at speeds of up to 64 megabytes per second.  That equates to an entire C D ROM's worth of data being moved internally in only 10 seconds.

Lloyd adds that this new server only handles the call sign database. The main QRZ.com web server remains a 450 MHz Sun E420R with 2 gigabytes of RAM.  (QRZ.com)

RADIO HERITAGE: NAVY TO CLOSE SUB COMM CENTERS

The United States Navy says that it will dismantle two extremely low frequency radio transmission centers used to communicate with submerged submarines. The Navy says that the 400-million submarine-communications system, which has been in use since 1989, is outdated and no longer needed.

Two transmitter sites are involved. One is in northern Wisconsin and the other in Michigan. They will go out of service on September 30th but could take up to three years to disassemble and close down permanently.

Each system consists of a transmitter and an antenna strung on 600 12 meter high poles. The navy has used these extremely low frequency transmitters to maintain secure communications with submarines at sea but now will use 12 smaller transmitters, sited worldwide. (Pulished reports)

**

HAM RADIO IN SPACE:  ISS REPEATER ON AGAIN

The FM Repeater and BBS on board the International Space Station was again open for general ham radio contacts on September 27th and 28th.  During that time voice contacts were available on by transmitting up to the I-S-S on 145.920 MHz with a 67 Hz CTCSS tone while listening for replies on 435.300 MHz.  The Bulletin Board used an uplink of 145.860 F-M and a downlink at 435.150 MHz.  This operation was followed by a PSK-31 Experimenters Wednesday Test on September 29th.

The system will be on periodically and ARISS will announce the dates and times in advance.  Check with the I-S-S Fan Club web page at www.issfanclub.comto see what the latest status is.

Also, keep in mind that the radios on board the space station are not able to correct for Doppler as the frequencies are  channelized.  It is up to the ground station to do the Doppler correction.  For 2 meters, the Doppler shift is about +3kHz at the beginning and goes to about -3kHz at the end.  For 70 cm, the Doppler is about +10kHz at the beginning and goes to about -10kHz at the end.

The 70cm Doppler is roughly 3 times the 2m Doppler.  Many of the tracking programs have the ability to calculate the frequency shift. (ARISS)

**

HAM RADIO IN SPACE:  MIKE FINCKE ON THE AIR

And as his time on board the I-S-S begins to wind down ham astronaut Mike Fincke, KE5AIT, has been on the air quite a bit.  Not only to talk to school students in pre-scheduled contacts, but also to any ham who wants to chat a bit.  One of those who had the opportunity to talk recently with the intrepid space traveler is Scott Avery, WA6LIE, in Salinas, California, who had had his recorder running:

--

Contact audio here.  Hear it at www.arnewsline.org

--

Scott says that his QSO with KE5AIT space mobile took place at about O2:15 on September 28th.  Needless to say that signals were 5 by 9 and full quieting both ways.

Fincke and Commander Gennady Padalka, RN3DT will be finishing their tour of duty on the ISS in the middle of October.  They will be replaced by Expedition 10 Astronaut Leroy Chiao, KE5BRW, and Cosmonaut Salizhan Sharipov.  WA6LIE's full contact with the I-S-S can be heard on line at www.qsl.net/wa6lie (WA6LIE)
**

DX

In D-X word that Crete will be coming on the air in October.  This as SV9FBM and SV9FBZ become active as active as SY9Y in the CQ World Wide DX SSB Contest on the 30th and 31st as a Multi- Single entry. QSL to Stelios Aggelakis, P.O.Box 113, GR 72200 Ierapetra, Crete Island, Greece.  (OPDX)

And  EA1QF and EB1AA will be on the air from Cuba from October 12th to the 25th. The pair will be working on a "Radiosolidarity" project, but will also be operational on the H-F bands from several station locations as T42R. QSL to EA4URE at his callbook address.  (GB2RS)

**

THAT FINAL ITEM: THE ARDF REPORT

What do Burrowing Owls and 80-meter transmitters have in common? They are both targets of hams who like to do radio direction finding.  Newsline's Joe Moell K0OV tells us more:

--

There's lots happening in the world of radio direction finding this summer.  More young Burrowing Owls are leaving their nests in western Florida, so hams in that state who aren't busy with hurricane communications are by their receivers, listening for the radio tag signals to see where these critters will go. If you can help, please join them -- I'll tell you how in a moment.

Also, a 21-member delegation of ARDF Team USA competitors, trainers, jurors, and family members went to the Czech Republic and the World Championships of radio foxhunting, September 7th through the 12th. These World ARDF Championships take place every two years. USA's 2004 team members were OMs and YLs ranging in age from 19 to 62. Among them was Jay Thompson W6JAY, Newsline's Young Ham of the Year for 2003 and recent winner of the ARRL Hiram Percy Maxim Award. Each competed once on 80 meters and once on two meters, looking for three, four or five transmitters, depending on age and gender category.

USA began attending the World Championships in 1998, but European and former Soviet countries have been holding ARDF events for over 30 years. So it's no surprise that they dominated in the final standings. Nine of these nations garnered all of the individual and team medals. The total medal count was led by Czech, Russia, and Ukraine with 34, 28 and 26 respectively.

USA, Australia, and Great Britain were among the 19 nations that won no medals. But we're getting better every year. Two Team USA members had top-ten individual finishes in their categories. Nadia Scharlau of Cary, NC took 6th place out of 22 on two meters. She might have won a medal on 80 meters, but the battery fell out of her receiver and she had to find the last fox transmitter with just the bearings that she already had on her map, losing about ten minutes. Bob Cooley KF6VSE, age 62, of Pleasanton, CA placed 9th out of 34 on his two-meter run.

All of our team members earned their spots by taking medals in the USA National Championships. This year's were in California in June, and a site is already being sought for the national championships in 2005, 2006 and beyond. As USA's ARDF Coordinator, I would like to hear from you if your club is interested in putting on the championships.

You can read all about the ARDF championships, Team USA, and volunteer wildlife tracking -- and find out how to get involved -- at the usual place, www.homingin.com. That's homingin, as one word, homingin.com.

>From southern California, this is Joe Moell K-zero-Oscar-Victor, for Amateur Radio Newsline.

--

Again, that website Joe mentioned is www.homingin.com.  And homingin is one word.  (K0OV, ARNewsline(tm))

Yea Einstein I have.  In fact I went THERE before I came HERE.  And
the information is all conflicting and out of date.  One link says
retired and living in Concord.  Another link says retired and managing
property in Phoenix, AZ.

If you boners don't know, fine, but DO NOT REPLY WITH nonsense like
"have you tried google?".  Seems like that's becoming the fallback
point of the clueless these days...  :P

HDTV in developing nations : Fiji : an excellent way to provide broadband telecom services ...

Using DVB-T transmission technology it would be trivial (over the long run) to provide TV1, as well as Fiji's 2 radio networks via thin DTV subchannels.

The remaining capacity could be allocated to Internet capacity, and during daylight hours -- a 24 hr news station featuring news from Australia, NZ and parts of the world where the tourists come from.

The Internet capacity could provide a good source of revenue for the state broadcaster.

SKY in Fiji could take its time to convert to DVB-T, mainly waiting for proper (sim card compatable) subscription technology to emerge for DVB-T.

Go to your local station and ask to look in the public inspection file.
There should be one there.  If you ask the engineer nicely (and they are
a station that still has an engineer), he might also have some old proofs
so you can see how widely the pattern varies from year to year.

Be aware that the plot for a 50KW station on a stick in Montana will be
radically different than the plot for the same transmitter and tower in
Arizona.  Which is what makes it fun.

Do you want antenna pattern or station's coverage?

Pattern is easy. There are a number of on-line sources including the FCC's AMQUERY.  You can also download the whole AM database and display patterns in my AMSTNS program available (with very recent data) from http://home.earthlink.net/~lvehorn/

Coverage is hard, since interference from other stations is involved - a simple field strength prediction is not adequate.  The only RELIABLE source I know for interference-free coverage is to look up the station's actual application on the FCC's AMQUERY.

www.radio-locator.com

Note that the maps are careful labeled "for entertainment purposes." They are not totally accurate,a nd very,very, very exaggerated. On AM, the only useful contour is the innermost circle... and it is actually bigger than reliable reception areas really are in most cases. The outer two circles are totally meaningless.

This only assumes you are in the US, one of few places where "major" and "50,000 watt" are synonymous.

Which one. There are several hundred which are 50 kW.

Perhaps the most interesting Class A pattern is WSAI's.

Since I'm the one who runs the site mentioned above
(www.philaradio.com), I would appreciate it if YOU got YOUR facts
straight.

The description mentioned above (retired and living in Concord, CA.)
is the ONLY thing it says on Dr. Don's description.  The info on the
site is NOT "conflicting and out of date" and I would appreciate it if
you would refrain from casting untrue and insulting dispersions.

We get quite a bit of our info from site vistors. We verify it as best we can. However, checking on people who have been out of the biz and "out of touch" for several years can be difficult at best. We do the best we can with the limited resources we have. Remember, it's a FREE site and we derive nothing from it other than the pleasure of doing it and sharing some memories of (IMHO) some of the best radio ever created.

Again, I would greatly appreciate your refraining from making insulting and untrue remarks.

Regards,
Kris Earl Phillips

> Canada)

--------------------

The contours shown on Radiolocator.com are based BOTH on the radiation pattern of the transmit antenna system, and ground conductivity along various radials for 360� around the transmit site.

If conductivity was a constant throughout the groundwave coverage area of
the station (almost never happens), then from the "patterns" on
Radiolocator - to the extent they are accurate -  you could calculate the
actual shape of the transmit antenna radiation pattern, remembering that
field strength changes as the square root of changes in radiated power.

Y'know, that's where I was going to send him, but...

The patterns *aren't* there.

OK, there's a table that shows the relative field every (5? 10?) degrees of azimuth, and I suppose you could plot it yourself.

For FM and TV stations, they *do* have the DA patterns...

I usually use Bob Carpenter's AMSTNS program.

>www.radiolocator.com

Come on, Bob.  You should know better than that.  Radio-locator.com's maps are clearly labeled "This image is intended solely for entertainment purposes," and quite frankly belong in the funny papers, since they bear no resemblance whatsoever to either the FCC-approved directional pattern or any sort of real-world coverage (even though the program's coder claims they're drawn using FCC data).

R.J. Carpenter's AMSTNS and TVFMSTNS programs are the real McCoy, since they plot the patterns directly from the FCC data, and they're the only programs I know of with such information that are updated periodically.  Even though

they're DOS programs, they run just fine on the versions of Windows that only
have DOS emulators (i.e., NT, 2000 and XP).

He died from boredom.

Sorry.  Couldn't resist.  I've never been able to stomach Delilah.

How many times has FOX News been caught broadcasting as *fact* something that their own fact-checkers said was probably fake?

At least to date, FOX News has been quite a bit more careful than CBS.

FOX News is not "conservative" media.  A Yale University study on media bias showed that, while FOX is right-of-center, it is was no more to the right than USA Today is left-of-center.  CBS is much further to the left. FOX News is actually closer to the center than any other TV news.

There is no conservative news channel.

Hello Gang, I know we have a few 'seasoned pros' who read the newsgroup

Besides the typical salary and bonus issues....Can anyone name some things that I should put on my "wish list" for my upcoming contract?

Usually 'contract time' is a good time to get a lot of those *little things* that seem like a pain in the neck at other times.

What would be on your wish list?

Have you heard of anything good that other's in radio have gotten in their contract negotiation?

Noty looking for the 'tall tales'...but more of the practical things one can/should include.

Thanks for your help

M

How many times did Fox News report SCUD missle attacks during the
invasion of Iraq? I heard them do it at least three times.

Matthew (there were no SCUD missles fired)

USA Today has no content! How can something that provides basically no analysis and no actual information be biased in any way?

I mean, you could learn more from reading the cereal box....

There is a new show on the World Talk Radio called Thoroughbred Connection hosted by Jeff Bloom and John Hernandez.

This Friday at 4:40 pm eastern Trans Atlantic Racing Stables and www.owneracehorses.com owner Michael DeVita is scheduled as guest. Ownracehorses.com is turning ordinary horse racing fans from around the world into thoroughbred racehorse owners.

You can find out more or listen to the Thoroughbred Connection Show visit http://www.worldtalkradio.com/archives.asp?sid=151

Last Friday Jeff and John interviewed
1) Darren Rogers, Director of Communications at Lone Star Park, the host track for the 2004 Breeders' Cup in October.
2) David Bernsen of www.letitride.com, the most visited horse racing web site on the Internet.
3) Jim Mazur of Progressive Handicapping, publisher of the popular Crushing The Cup and The Crushing Zone Breeders' Cup handicapping products.

What did the study examine? News? Or all of the Fox broadcasts including
their commentators?

The "Radio Crazy" is baaaaaakk!!

AM radio station in Alabama is still for sale. We still are seeking active or inactive investors to help us acquire the station.

This is a joint venture and there is an element of risk. You could lose all or part of your investment.

Min. $5,000 (Five grand)per investor. No individual may own over 49 percent. This means me too!

Station is AM daytimer, 1,000 watt, non-directional. NO real estate, repeat NO real estate! You heard it first here kiddies!

References:

a-My parole officer. Mr. Larson E. Rapp, c/o Zing Zing prison, Ossiningstink, NY. Tel: 1-800-IMA-THUG.

b-Trade reference.....Brazilian Bandit Airways, US office, Oshkosh Airport, Oshkosh, WI. (You private pilots will see the connection!) Purchased a one-way ticket to Rio using small unmarked bills. Don't worry, I won't leave until I have the investors funds in a Swiss bank account!

I am NOT an agent, shill, broker, owner or part owner of this station. I am also NOT a crook!

Tel: (478)741-1710 in Macon, GA.

73,

Meyer Gottesman, W6GIV
aka The "Radio Crazy"

Read his father's book "A World Transformed". He did not finish the job. He did a job his father explained should not be done because of the exact consequences we are now facing.

Pg. 489 A World Transformed by George Bush and Brent Scowcroft -

"We would have been forced to occupy Baghdad and, in effect, rule Iraq. The coalition would instantly have collapsed, the Arabs deserting it in anger and other allies pulling out as well. Under the circumstances, there was no viable "exit strategy" we could see, violating another of our principles. Furthermore, we had been self-consciously trying to set a pattern for handling aggression in the post-Cold War world. Going in and occupying Iraq, thus unilaterally exceeding the United Nations' mandate, would have destroyed the precedent of international response to aggression that we hoped to establish. Had we gone the invasion route, the United States could conceivably still be an occupying power in a bitterly hostile land. It would have been a dramatically different - and perhaps barren - outcome."

The WMD and tie to 9/11 were all made up by the
> liar to justify the war.  Should we call this Iraq-gate?
>

Maybe just irwreck.

Quote from the study:

"  Few studies provide an objective measure of the slant of news, and none has provided a way to link such a measure to ideological measures of other political actors.  That is, none of the existing measures can say, for example, whether the New York Times is more liberal than Tom Daschle or whether Fox News is more conservative than Bill Frist.  We provide such a measure.  Namely, we compute an ADA score for various news outlets, including the New York Times, the Los Angeles Times, USA Today, the Drudge Report, Fox News? Special Report, and all three networks? nightly news shows.

Our results show a very significant liberal bias. All of the news outlets except Fox News? Special Report received a score to the left of the average member of Congress.  Moreover, by one of our measures all but three of these media outlets (Special Report, the Drudge Report, and ABC?s World News Tonight) were closer to the average Democrat in Congress than to the median member of the House of Representatives.  One of our measures found that the Drudge Report is the most centrist of all media outlets in our sample.  Our other measure found that Fox News? Special Report is the most centrist.  These findings refer strictly to the news stories of the outlets.  That is, we omitted editorials, book reviews, and letters to the editor from our sample. "

Thanks, Paul. KODA it is. I used to listen to KODA (the call) when it played easy listen music on AM. <G>

And Mark... I was thinking KLEF was the station that gave its classical library to KUHF. I didn't know KUHF was a jazz station before, though.

KTSU is my favorite jazz station. (Could they have received KUHF's jazz library?) Sometimes the signal received here on the western shore of Galveston Bay is marginal -- part weather, part bracketed by high powered, maybe overmodulating Xian stations, I believe.

To Fred et al.: I doubt the Internet is much of a threat, because expensive bandwidth limits the amount of listeners who can be served at one time. But those two satellite radio services are a big threat.

On the other hand, there are jillions of cheap radios out there that people listen to. Of course, digital radio, if it becomes mandatory, will kill that market. What are the authorities thinking? Heck, I have AM/FM/SW receivers that cost under $10; the better ones under $20. (I also have even better ones than those.)

Bill,
SE Texas

It will be interesting to see if any of Clear Channel's 1200+ radio stations in the U.S. will add John Fogerty's Deja Vu (All Over Again) to playlists.

Deja Vu (All Over Again)

Did you hear'em talkin' 'bout it on the radio
Did you try to read the writing on the wall
Did that voice inside you say I've heard it all before
It's like Deja Vu all over again

Day by day I hear the voices rising
Started with a whisper like it did before
Day by day we count the dead and dying
Ship the bodies home while the networks all keep score

Did you hear'em talkin' 'bout it on the radio
Could your eyes believe the writing on the wall
Did that voice inside you say I've heard it all before
It's like Deja Vu all over again

One by one I see the old ghosts rising
Stumblin' cross Big Muddy
Where the light gets dim
Day after day another Momma's crying
She's lost her precious child
To a war that has no end

Did you hear'em talkin' 'bout it on the radio
Did you stop to read the writing on the Wall
Did that voice inside you say
I've seen this all before
It's like Deja Vu all over again
It's like Deja Vu all over again

Amateur Radio Newsline™ Report 1415   September 24, 2004

Amateur Radio Newsline report number 1415 with a release date of Friday, September 24th, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T.  Shortwave broadcasters say no to B-P-L, big money awarded to put a pair of truly rare D-X locations on the air and a satellite broadcaster joins the rescue radio cause.  Find out the details on Amateur Radio Newsline report number 1415 coming your way right now.

## THE BPL FIGHT:  SHORTWAVE VS. DIGITAL SHORTWAVE

Amateur Radio has another friend in its fight to stop the world-wide rollout of Broadband over Powerline technology.  This, as a  European short-wave broadcaster say that B-P-L and digital radio will have a lot of trouble co-existing.  Fred Vobbe, W8HDU, is here with an update on digital radio and an explanation of why the two do not mix.

--

Jacob Freedman, N2MPN, found an interesting story on BBC News Online and thought he would share this news with A.R. Newsline listeners. In the link to the story, titled "Fears for new digital radio system" written by By Chris McWhinnie of BBC Monitoring in Amsterdam, the warning came from Peter Senger, the chair of the Digital Radio Mondiale (DRM) at the International Broadcasting Convention in Amsterdam.

DRM is a standard agreed by world broadcasters for a completely new short wave radio system. The new internet power line distribution system has been evaluated by engineers, including the BBC, and has been found to affect short wave in particular.

Short wave is mainly used to broadcast internationally and the AM bands have been used since radio first started in the 1920s. The DRM system uses existing AM broadcast frequencies to deliver near-FM quality digital sound. It uses compression to squeeze clear digital sound into the narrow radio channels that currently carry crackly analogue signals.

The DRM technology has the potential to make digital radio available in places that Digital Audio Broadcasting (DAB) radio or even FM will probably never reach. As for the hardware required to hear these stations, there will be a new consumer DRM radio in the shops by Christmas 2005 and a tiny PC-only DRM set is already on sale.

DRM is not being used by many radio stations yet. However a number of radio stations have seen the potential for new cross-border radio stations.

A Germany-based music station is believed to be in the planning stages. BBC World Service and its counterparts abroad already have some regular DRM programmes and are backing the system.

DRM is being seriously considered in many countries where the FM radio band is full. China sees DRM as the answer to pushing digital radio across its vast territory.

The UK is not planning to use DRM for domestic radio. The UK has pinned its digital hopes instead on DAB, which offers stations like BBC 1Xtra, 6 Music, Oneword and Core. More digital radios have been sold in the UK than any other country.

Switching-off analogue FM and AM may take years and making millions of much-loved analogue radio sets useless will no doubt be controversial. If power line internet transmission is introduced, then international broadcasting on shortwave may also be consigned to history due to the interference from data travelling over mains electricity cables.

For Amateur Radio Newsline, I'm Fred Vobbe, W8HDU

--

As we go to air, the proponents of Broadband Over Powerline have not yet challenged the Digital Radio Mondiale findings.  (W8HDU, N2MPN)

**

## PRESERVING THE BANDS:  LEAGUE KICKS OFF 2005 SPECTRUM DEFENSE CAMPAIGN

Meantime, the ARRL has kicked off its 2005 Spectrum Defense Fund campaign and its slogan id that this is a lot more than just BPL. Amateur Radio Newsline's Bruce Tennant, K6PZW, has more:

--

ARRL President Jim Haynie, W5JBP, appears to be the point man in this important effort to preserve our operating bandspace.  He says that while interference from broadband over power line technology is the most prominent and immediate threat to amateur spectrum, donations from ARRL members and supporters make it possible for the League to face it and other spectrum challenges as well.

According to the ARRL Letter, in 1985, the League spent perhaps $200,000 on advocacy and spectrum defense. Today the annual outlay is close to $900,000.

Haynie says that he is aware that this work is something that hams cannot see, touch or feel, but it's just as important as those things that they can.  This is because we would not have all those other things if it were not for the fact that we have a place to operate.

Haynie notes that not all of the ARRL's advocacy efforts necessarily involve taking defensive measures, such as with BPL, but all of them are essential. The popular ARRL leader says that, as he sees it, the League's job is to look out for the best interests of all of Amateur Radio. This includes making sure that we have places in the ether to go on the air.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

The ARRL says that the Spectrum Defense Fund depends on membership support and is essential to the League's continued success in this AREA. Contributions can be made on-line at the ARRL's secure donor Website. You will find it at https://www.arrl.org/forms/fdefense/fdefense.htm Those contributing at or above the $50 level may request a gift as a token of the League's appreciation. (ARRL)

**

BIG DX NEWS: NCDXF MAKES $100,000 GRANT TO UPCOMING OPERATIONS

Some big news in the world of DX. This as the Northern California DX Foundation announces some big money sponsorship grants for the 2005 D-Xpedition season.

The awards were announced at the recent W9DXCC DX Convention in Illinois. The recipients are the upcoming Kerguelen Islands FT stroke X and the Peter One 3YZ0X operations. These are two of the rarest and most wanted locations on every hams most wanted list.

Northern California DX Foundation president Len Geraldi, K6ANP, says that that these awards are substantially higher than normal amounts provided to aid major D-Xpeditions. Together they exceed $100,000, and represent the largest made in the foundations history.

Geraldi noted that these exceptional grants made in light of the rarity of operations from these locations and the significant individual contributions being made by the participants. He also noted the very high cost of mounting D-Xpeditions to such remote locations.

The Northern California DX Foundation not only funds DX operations.

In cooperation with the IARU, the organization also maintains a worldwide network of high-frequency radio propagation beacons that help amateurs estimate the current condition of the ionosphere.

The Northern California DX Foundation was founded in 1972 to assist worthwhile amateur radio and scientific projects with equipment and funding. More about the group is on-line at www.ncdxf.org and we will have more D-X news later on in this weeks newscast. (N4GN)

**

Break 1

Its time for you to identify your station. Cue the announcer. Dick Tyler, WA2EHL if you please:

"From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including WA2EHL on Live 365 from Burlington, New Jersey."

(5 sec pause here)

**

RESCUE RADIO: HURRICANE IVAN IS BACK AND JEANNE ON THE WAY

A reincarnated tropical storm Ivan has made landfall a 2nd time. This, near the Texas-Louisiana line on Thursday evening, September 23rd. The one-time hurricane was expected to dump up to ten inches of rain over the coming weekend.

The 22-day-old former hurricane broke apart after hitting the U-S, but a piece spun back out to sea and reformed as a separate tropical storm. It them made its way back into the Gulf of Mexico before again making landfall.

Forecasters say Galveston, Houston and College Station Texas will be under a flood alert. C-Q Magazine's Bob Josuweit, WA3PZO quoting sources at the ARRL says the Texas Office of Emergency Management has requested activation of the Amateur Radio Emergency Service Net. The net will switch between 7.285 and 3.873 MHz depending on propagation and time of day for as long as its needed.

Meantime, along the Eastern seaboard, ham radio operators are preparing for the arrival of Hurricane Jeanne. This as the killer storm appears to be zeroing in on the southeast U.S. coast, with forecasts putting Florida firmly in the storm's sights with landfall possible on September 24th or 25th. The Hurricane Watch Net on 14.325 MHz announced plans to begin operations Friday, September 24, 2004 at 10:00 a.m. Eastern and continue till until 11:00 p.m. or until the 20 meter band closes .

As we go to air news reports say that Jeanne is responsible for at least 1,100 deaths in Haiti. 1,250 are still missing and the toll continues to rise. More ham radio storm coverage next week. (WA3PZO, CQ, ARRL, ARNewsline(tm), others)

**

RESCUE RADIO: HURRICANE IVAN IN NJ

Hurricane Ivan left its mark all along the Eastern U-S before it finally disappeared from that area. From the Carolina's through New England, there were daily news stories about Ivan spawning tornadoes and severe flooding. One area hit by the remnants of the storm was the state of New Jersey which is the home on Amateur Radio Newsline's Henry Feinberg, K2SSQ.

--

Mercer County, New Jersey, ARES and RACES was activated at about 5 PM on Saturday, September 18th. This, to staff the radio room at the Mercer County Emergency Operations Center.

Heavy rainfall caused by Hurricane Ivan remnants in the Catskill and Pocono Mountains Friday night was forecast to cause the Delaware River to reach flood stage in Trenton at 6 AM Sunday and to crest at record levels Sunday night.

The original crest forecast was for 8 feet above flood stage which is 18 feet above normal river level. That was later reduced to 3 feet but was still the highest level on the Delaware River since the catastrophic floods of 1954.

In Mercer County, Amateur Radio Operators staffed the E-O-C radio room continuously in four hour shifts until Monday morning. The radio room is licensed as W2MER and has H-F, 2 meter, 220, 440 and APRS ham gear permanently installed. It also has capability on all public safety and Red Cross frequencies used in the county. Extra radio amateurs were on call over the W2ZQ Mercer County ARES and RACES 146.67 Mhz. repeater. This, if additional communications was needed at shelters and other locations.

Hams used the New Jersey Office of Emergency Management's statewide NJ2EM 220 MHz repeater and the statewide 2 meter APRS digital messaging network to maintain links with the Hunterdon County and Warren County EOC's further up the river. Per the Mercer County EOC protocol, the hams also were the operators of the public safety radios in the EOC to maintain contact with the sheriff officers coordinating the evacuations along the river.

Amateurs participating as EOC Radio Officers included N2GJ, N0YMV, K2GW, W2SRH, W2QOB, N2JV-P, and WA2KM.

For he Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ, in New Jersey.

--

Gary Wilson, K2GW, is the Section Emergency Coordinator for Southern New Jersey Section. He says some 1500 people including 180 residents of a nursing home were evacuated to near-by shelters and hotels on Sunday the 19th. (K2GW)

**

RESCUE RADIO: XM SATELLITE RADIO TO ISSUE EMERGENCY ALERTS

There will soon be yet another source of emergency alert information, and you might say that this one is out of this world. Well kind of. Norm Seeley. KI7UP, has the details:

--

X-M Satellite Radio says that its getting into the emergency alert business. This by making available the X-M Emergency Alert channel to its more than 2.1 million subscribers, nationwide.

According to a September 10th press release the satellite radio provider will dedicate its Channel 247 to what it calls X-M Emergency Alert. The service will be dedicated to providing updated critical information before, during and after natural disasters, weather emergencies and other hazardous incidents to listeners across the country. The channel will also provide key survival information such as evacuation routes, shelter locations and updated weather emergency information for impacted areas.

Information sources of the broadcasts will include the Federal Emergency Management Agency, the National Oceanic and Atmospheric Administration, the National Weather Service, the U.S. Department of Health and Human Services and the American Red Cross. Also included will be local police and fire departments and eyewitness reports making the service about as all encompassing and up to the minute as it can get.

--

X-M hopes to have this new service fully operational fairly soon. (XM)

**

ENFORCEMENT: FCC QUESTIONS 40 METER MORSE PRACTICE OPERATION

The FCC has some questions for a Missouri ham who claims to be running Morse Code Practice on 40 meters. And in a September 2nd letter to Paul D. Westcott, KC0OAB, the regulatory agency also sets some pretty tough ground rules for him to carry on. Amateur Radio Newsline's David Black reports from our South-East bureau in Birmingham Alabama:

--

The FCC contacted Paul D. Westcott, KC0OAB, on June 21st of this year. The Commission told Westcott it was receiving complaints about high speed one way Morse code transmissions from his station on the 40 meter band. The Commission says it has complaints alleging that the ongoing transmissions interfere with normal amateur communications.

Westcott replied July 11th, saying his transmissions are indeed code practice, and he indicated that they are computer controlled. But the Commission now says Westcott's code transmissions are sent at an unvarying speed of about 30 words a minute. That they are sent continually, 24 hours a day, on 7.030 MHz. The Commission says the constant speeds casts doubt on Westcott's claimed motive for sending the code transmissions.

The Commission reminds Westcott about amateur radio service rules requiring that a station be under the direction of a control operator during all transmissions. That means a control operator must be on duty at all the times Westcott's station is transmitting...and that he's responsible for preventing harmful interference to other stations.

The Commission tells Westcott to provide the dates, times and frequencies of all code practice sessions. And the FCC says that information is to be furnished by Westcott by either telephone or FAX at least one week in advance of any given transmission.

The Commission also wants Westcott to submit the name, address and telephone number of the control operator for all operation of KC0OAB when sending code practice. The FCC says the telephone number Westcott provides must be one at which the Commission can reach the control operator during the transmissions.

Finally, the Commission warns Westcott that enforcement action against him is coming if there are valid complaints that his transmissions continue to interfere with ongoing communications.

For the Amateur Radio Newsline, I'm David Black, KB4KCH, at the South-East bureau in Birmingham Alabama.

--

Westcott was given twenty days from the date of the FCC's letter to respond with the required information.  (FCC)

**

INTRUDER WATCH REDUX:  STRANGE SIGNALS AT 7.238 MHZ DISAPPEARS

And that strange unidentified signal that Bob Gonsett W6VR reported to us on two weeks ago.  The one being heard by hams in Western states on 7 point 238 Mhz?  Well guess what.  It has disappeared as mysteriously as it showed up and nobody is very sure of exactly what it was.

According to several Newsline listeners and our own monitoring, the last time the raspy buzz saw was heard it was late on Wednesday September 15th.  By the 16th it was gone without a trace and has yet to pay the 40 meter phone band -- or any other ham band for that matter -- a return visit. (ARNewsline(tm) from listener reports)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

**

THE SOCIAL SCENE: SWL'S MEET IN CALIFORNIA IN OCTOBER

Turning to the social scene. the 2004 Radio Fest gathering of SWL's is slated for Saturday, October 16th. This, in the Community Room of the F&M Bank in Seal Beach, California.

Radio Fest is sponsored by the Southern California Area DX'ers group. Doors open at 9:30 Pacific Coast time. This years speaker list include Radio School's Gordon West, WB6N0A, plus representatives from the broadcast and short-wave sectors of the listening hobby.

Interested? Well, for more information please contact Stewart MacKenzie by e-mail to wdx6aa@earthlink.net or phone 714-846-1685 during normal business hours on the U-S west coast. (SCADS)

**

WITH THE HANDIHAMS: 2005 CALIFORNIA RADIO CAMP ANNOUNCED

And the Handihams have announced that the 2005 California Radio Camp will be the week of February 27th through Sunday, March 6th. If you are a member with a disability and want to attend, please contact Handiham headquarters for a camp application package. You may either call the office toll-free at 1-866-426-3442, or e-mail hamradio@courage.org.  (HandiHams)

**

RADIO EDUCATION:  ARRL TEACHERS INSTITUTE

And a quick note on the highly successful ARRL sponsored first Education and Technology Program Teachers Institute held the second week of August.  During the week long program Mark Spencer involved the teachers in hands-on activities for integrating wireless technology, Amateur Radio, Amateur Radio on the International Space Station and other space-related activities into their math and science classroom curriculum.  And word is that at the end of the week the teachers had enjoyed themselves so much that some said they weren't ready to go home.  (ARRL, ANS)

**

ALL POINTS BULLETIN UPDATE:  $25000 REWARD OFFERED TO CATCH TOWER ARSONIST

An update to our story three weeks ago about a fire bug who seems to hate radio.  A $25,000 reward is now being offered information leading to the arrest and conviction of the person setting fire to radio towers in the Clark County and Portland, Oregon during the past six weeks including a blaze that burned down a ham radio operators home.

The most recent fires, set close together occurred on September 9th in Portland.  This, only 12 hours after a federally led task force asked for the public's help in finding the man they think might be a serial arsonist working alone.

John W. McMahon, a supervisor with the federal Bureau of Alcohol, Tobacco, Firearms and Explosives told the press that a task force was offering a top reward of $10,000 for information leading to the suspect's conviction.  Comcast, whose service was interrupted by one of the fires, added $15,000 to the reward. This raises the bounty on the fire bugs head to $25,000.

The fifteen member task force investigating the incidents has concluded they were linked to 12 communications tower fires set since July 29th.  The most recent fires will raise the estimated damage done by the arsonist to more than $250,000.  The 11 previous fires had targeted communications towers or equipment and one private Amateur Radio tower.

As previously reported, the ham-radio tower fire, which was set August 20th. At that time it was the seventh incident and spread to an adjacent rental house, leaving it badly damaged. The resident, John Stein, AB7F, cut his hand trying to put out the blaze before firefighters arrived.

And a group of Public Safety organizations that is trying to help capture the serial arsonist has published a wanted poster complete with pictures. You can find it as a PDF file of it at www.sbe124.org (Portland SBE, others)

**

## HAM RADIO IN SPACE: KE5AIT COMPLETS CONTACTS WITH 7 CONTINENTS

Yet another ham radio record has been set . On Saturday September 11th, Mike Fincke, KE5AIT became the first crew member of the International Space Station to talk to all 7 continents using amateur radio. This, when he made contact with Palmer Research Station Amateur Radio station.

During the contact Fincke spoke with Chuck Kimball, N0NHJ, while a packed radio room at the center listened in. Fincke and Kimball compared life in the two stations, discussed time zone differences and the experiments involving fluids that Fincke was working with.

Fincke is believed to be only the third astronaut to accomplish this all continent feat. The last such occurrence was in 1992 aboard STS-45 when astronauts David Leetsma and Kathryn Sullivan also talked to Palmer Station to complete their continent contact list.

Fincke will be finishing his tour in the middle of October when Expedition 10 Astronaut Leroy Chiao, KE5BRW, and Cosmonaut Salizhan Sharipov will come aboard. (Courtesy of Kenneth Ransom, JSC)

**

## NAMES IN THE NEWS: G3YJO NAMED VISIONARY AND INNOVATOR

And word that Space News International on the Space dot com website has honored a UK ham. This as it names Professor Martin Sweeting, G3YJO, as one of the top space visionaries and innovators.

In a recent article the news service said that Sweeting turned Surrey Satellite into the world's microsatellite builder. Also that under his guidance this British company has trained a new generation of spacecraft builders throughout the world helping countries like Turkey, Thailand, Korea and Chile enter the space age. (GB2RS)

**

## HAM RADIO NEAR SPACE: AMATEUR RADIO HIGH-ALTITUDE BALLOONS

Attention East Coast hams. The first SimSat engineering test balloon flights are targeted for launch on Wednesday, September 22, in the Maryland and Virginia area. These two experimental exercises are designated SimSat-1A and SimSat-1B. This is a good opportunity to show a local students how to receive the balloon's simple telemetry beacon. (ANS)

**

## WORLDBEAT - CANADA: NEW CALLSIGN OROPOSAL

The Canadian national ham radio society Radio Amateurs of Canada has submitted a proposal on Amateur Radio Call Signs to Jan Skora. He is Industry Canada's Director Genera for the Radiocommunications and Broadcasting Regulatory Branch.

The Proposal, as approved by the Radio Amateurs of Canada Board of Directors, makes recommendations on changes to Call Sign Policy and Special Event Prefixes. This, all comes as the result of the WRC-2003 decisions amending the ITU International Radio Regulations to permit call signs in the Amateur Service to have up to four characters in the suffix. (RAC)

**

## DX

In D-X word that HA0HW and HA4DX are active as J45HW and J45DX respectively. This, from the isle of Rhodes through the 3rd of October. Activity will be on 40 through 10 meters using CW, SSB, RTTY and PSK31. QSL as directed on the air. (GB2RS)

And TA3J will activate the special callsign TC2K4J. This, from September 24th to November 2nd in memory of 40 Turkish Radio Amateur Silent Keys. Activity is on 160 to 2 meters using all modes. (GB2RS)

**

THAT FINAL ITEM: PART OF THE BEEB ON THE BLOCK

And finally this week it look as if a piece of radio history may be up for grabs. This with word that part of the world renowned B-B-C World Service is for sale.

The United Kingdom's publicly funded British Broadcasting Corporation has reportedly approached Germany's Bertelsmann Corporation along with U-S media giants Time Warner and the Walt Disney Company as potential bidders for BBC Worldwide. BBC executives expect the division, which includes BBC America, BBC Prime channels and 26 magazine titles could be worth up to 3.5 billion dollars of needed revenue.

The U.K. government is currently reviewing the BBC's funding and license. One report said that the broadcasters internal review of its options appears to be timed to coincide with the government's evaluation as well. (W8HDU, Bob Ulm, WDOH-FM)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. Thousands of music lovers have discovered commercial-free U.S. satellite radio stations, leaving Canadian companies - and the CRTC - scrambling to catch up

Paul Brent
Financial Post

http://www.canada.com/national/nationalpost/financialpost/story.html?id=e702acb5-a3fd-4bec-aa73-3e2f11515232

Saturday, September 25, 2004

Nearly two years ago, Karen Pace found religion. And like a true believer, she's been spreading the message ever since.

Ms. Pace, 38, a Toronto music publicist, is an apostle for Washington-based XM Satellite Radio, the world's largest satellite radio service, whose beams sweep across Canada unimpeded by the country's broadcasting regulators.

"I have personally signed up 14 of my friends," she says. "I wish everybody had an XM radio. I wish for Christmas I could afford to buy everyone I know an XM radio."

Ms. Pace is not your typical music lover. She listens to satellite-delivered music 40 to 50 hours a week, in her car driving to New York or Montreal on business, as well as on a portable radio in her home and cottage, all for the subscription fee of US$10 a month. Her love of the digital-quality sound and variety from 68 commercial-free music channels has also meant she has largely abandoned commercial radio.

"Radio plays the same artists over, and over, and over," she said. "That is not what radio used to be. It was when the large corporations took over radio, and radio became about ad sales in the early to mid-'80s that we lost content."

Ms. Pace and an estimated 20,000 to 30,000 other Canadians are "grey market" participants, unauthorized if not illegal. They are not exactly the regulatory scourge of those who take in U.S. satellite television satellite signals -- yet. That is because the Canadian Radio-television and Telecommunications Commission has yet to turn its full attention to the matter.

In hearings this November it will be up to the broadcast regulator, a lightning rod of controversy for ordering the shutdown of CHOI-FM in Quebec City and the barring of Italy's state broadcaster RAI International, to decide what to do about what appears to be the greatest threat to commercial radio since the advent of television.

Satellite radio is the fastest consumer product to reach one million units sold, its backers say, and is on track to hit 40 million subscribers by the end of the decade. The U.S. firms already have deals with the world's major automakers, which now offer satellite-ready radios from one of the services in their cars. The decision seemed simple for the CRTC -- acknowledge reality and let them in -- so much so that the commission issued a call last year to have someone, anyone, propose a made-in-Canada alternative.
CHUM Ltd., a Canadian radio pioneer that operates 30 radio stations across the country, heeded the CRTC's plea and has proposed a less-ambitious (and less capital-intensive) system that will offer the same digital-quality sound without the need for satellites. Not utilizing shiny steel birds orbiting at 22,000 feet means CHUM will need to erect transmitters in major urban centres and create and sell new digital receiver radios. Urban, young and cheaper, it's a system that by its nature will not reach all Canadians. Still, CHUM's late entry, and the announcement this week that Quebec-based Astral Media Inc. will be a 19.9% partner in CHUM Subscription Radio, makes the coming hearings worth watching.

It's actually true. There are of course conservative
talk shows. But no actual "news channel" that is
consistently substantially to right of center. That's

exactly what the previously quoted showed.

All except Fox and MSNBC are very far left of center.

People who say things like "Fox is right wing" are
simply WRONG. They are weong because they are using
a cloud cookoo land definition of center. That is, they
simply assign themselves ... quite left wing people ...
as center.

Whe you ACTUALLY look at the real world, for example,
the Congress, Fox is very close to the center. If you
look at all the people, same result.

Doug McDonald

Following up, there are about 1,700 stations that could be called "rock" in the US, and there is no statistical way that CCU could own 60% of them.

I count, using data updated last week, about 315 CCU stations in rock, alternative, classic rock and non-rhythmic CHR. That is closer to 18% than 60%.

This is the stuff of urban legend.

It showed nothing of the sort.  All it CLAIMED was that FNC is not slanted to the right.  No proof was offered.

But, you just keep right on believing it if you want.  Everyone is entitled to their fantasy.

No, it does not. There is no reputable format tabulation that shows this.

Hi All,

I am looking for manuals to scan that are related to Collins Broadcast equipment and accessories.  Audio consoles etc.
You can currently find a number of manuals on the Collins Collectors Association website:
www.collinsradio.org  the manuals are on
http://www.collinsradio.org/html/manuals.html

There are a number of broadcast transmitters and audio consoles and accessories available for free download.
I am trying to
complete the broadcast section of the CCA archives. We have the permission of Rockwell Collins to scan and reproduce these manuals.
If you have any manuals of Collins Broadcast equipment that I may borrow to scan please let me now. I will pay shipping both ways and include a digital version of what you have sent me. Thanks to the number of you that have stepped up to the plate and provided the manuals that you have to make the broadcast area of the CCA website the best place for Collins equipment anywhere on the internet.
Thanks for your help!
Larry WA9VRH

In response to the subject of this thread:

Yes, the song is being played on classic rock stations.  Clear Channel owns Q-104.3 (WAXQ-FM) here in New York.  I heard the song a few times last week, since I listen to the station constantly at work.

He's plugging away.
That's all progressives can do in the US.
It took generations to get women the right to vote and workers the right to unionize.

Leonard

>This is the stuff of urban legend.<

Nah.  It's not even that complicated.  It's just the "we hate CC" crowd who will do or say anything to paint CC as the ultimate villain in the radio business.  They never seem to let the facts get in the way of their fantasies.

One man's liberalism is another man's conservatism. The "average member of Congress" would look like an antideluvian right-winger in England. Ditto in the US of the late 1940s.

But in the US the whole "true left" end ot the spectrum of public opinion, socialism, is missing, neatly excised by the long pressure of the Cold War. Now the American right wing is busily propogandizing us into believing that traditional liberals, who have always been staunchly

pro-capitalist and are more like libertarians than anything else known,
are "leftists".

They'll probably succeed, too.

An article from a Magazine called Broadcast in 1936 opened with the message
that there's is now in Australian Waters and on Australian service the first
vessel in the British Mercantile Marine to carry on board a radio station.'
The station operated on the ship to shore band and transmitted, following
the words of the journalist, a so called 'sea to shore program'.
Surprisingly I found out years ago that they used a ship which was brand new
and came over from Belfast to Sydney a week before transmissions began. A
call sign '9MI' was used for the broadcasts, with speech and music.'

The MV Kanimbla was for those days a most modern ship equipped with a 1,5 kW valve transmitter and special studios. The transmitter was crystal controlled, and was designed to operate on any wavelength between 20 and 50 metres. Mostly the signals went out on 25.54 and 49.47 metres. It was possible to maintain in contact with the Australian listeners during the voyage along the coasts of Australia as well as over considerable ranges during any voyages 'overseas'. For this last purpose the ship was also equipped with a short wave transmitter. Another newspaper mentioned that 'this apparatus which in her run from Belfast to Sydney enabled the owners to keep in touch daily with the commander of the vessel. Also during the maiden voyage the chairman of the Amalgamated Wireless, mr Fisk, who's company manufactured the apparatus at the MV Kanimbla, had almost a constant contact versus short-wave with the commander on the ship.'

The special studios on the ship were replicas of the most modern ones overseas and the chief announcer was Eileen Foley from Sidney in Australia. 'During the ship is at sea the programmes were also available for the people on the ship by a wide range of loud speakers and all the programs were made live on the Kanimbla. Even three different programs could be heard at the same time at the system. Some loudspeakers carried sport results which were picked up from land stations. Also artists were engaged for a certain trip to entertain the passengers as well as the listeners of the radio programs.

Another piece on the station could be found back in the proceedings of the World Radio Conference, which was held in Sydney in April 1938. 'On the evening o f 9MI's inaugural broadcast on May 28, during her maiden voyage to Australia, we were about 1000 miles from Sydney. Excitement was running high on board pending the success of the broadcast, and the possible temper of atmospherics. The program was relayed throughout the national stations of Australia at 8 pm. At 20 minutes to 8 atmospherics were very bad, and the possible success of this pioneer effort hung in the balance. However, optimism won the day - the elements cleared and the broadcast was considered very successful. Although the Kanimbla had not yet, at that stage, had bad weather, there have been times when she has given a heavy roll during a broadcast. Things have gone flying over the table.'

Eileen Foley commented on the rolling of the sea to her listeners: "I have then asked my listeners to please stand by, while I have freed myself from the studio furniture and the chosen records. So you see one needs a sense of balance - and well, the show must go on. On these occasions, I recall to mind the optimist who fell from the ten store building, and at each window shouted to his friends: 'All is well, so far'."

She had more to tell about the programming and artists: "In addition to compiling programmes from the large record library, the Kanimbla Quartette of girls, and often talented artists traveling with us, take part in the broadcasts. Many distinguished speakers have broadcast from 9MI, including Sir Ernest Fisk, who's manner at the microphone is incomparable and who has the fine sense of humor which makes his talks a delight to listen to. Among other well known personalities, I recall Sir Edward Cunningham, Sir Wallace Bruce, ex Lord Mayor of Adelaide, Professor Charteris from Sydney University and many others. Amongst world famed artists I recall Richard Crooks who

gave an interesting interview when traveling with his family on the ship
from Sydney to Melbourne. Richard Crooks was specially fascinated with our
floating broadcasting station, and I thought at the time that, with a little
persuasion, he would sing. However, I remembered perhaps in time, that he
was on holidays, so curbed my desire to hear that great voice."

There were other artist who chose to travel with the ship as Foley recalled:
'It is interesting to see that a number of radio artists have purposely
chosen the Kanimbla for their holidays. It would seem that the microphone
they have left behind is still with them, as it were - and they, as 'busmen,
apparently want to spent their holidays close to their work! Those
passengers are very welcome in our studios. Passengers traveling on the
Kanimbla have a unique opportunity of 'trying' themselves out over the 'mike
'. Each trip we organize is amplified through our public address equipment
to the various speakers on board. This innovation creates interest, and
often good talent is discovered. Recently one of our entrants in the
Nautical Parade was offered a 'shore job' by a manager of a station,
traveling with us, who at once spotted a pleasing quality in the voice."

But Eileen Foley was not the only one presenting on the station. Also
Captain Smith was a regular voice to be heard as he was always keeping his
weather eye open for interesting things to tell to the listeners. Of course
in those days less people had their own receiver but those who had one and
picked up the signals of the station were truly not unhappy. Hundreds of
letters from the listeners came in stating excellent reception from 9MI,
both direct, on short-wave, and via the national stations. During the voyage
out, while the MV Kanimbla was off the west east coast of Africa, the test
programs were heard in a good volume in Australia, Great Britain and other
parts of Europe. Reception reports were answered with a QSL card.

A question about Satellite radio (XM in particular)

Obviously they have some way to know that they are broadcasting to an individual receiver, else (a) they couldn't sell and send signal to specific devices who pay and not to others and (b) they can deliver specific programming (Playboy channel, Opie and Anthony) to specifc receivers.

But - suppose I listen to 'non-premium' channels - for instance, I listen to 15 (folk music) on weekends and 7 (70s music) during the week, and 132 (C-Span) during rush hour.  Can XM track that information to a per-subscriber level?  Do they have a way to know, for instance, that any moment there might be 400,000 people listening to NASCAR and 1000 to America Left?  What's their capability for usage analysis?

(The reason I ask - I like 15-Folk and I hope that enough people listen to it to keep it on the air.)

Ted

Bill Ballance was forerunner of shock jocks
Associated PressSeptember 26, 2004�

SAN DIEGO -- Bill Ballance, a radio personality whose bold 1970s talk show tackled relationships and sex and helped pave the way for today's shock jocks, has died at age 85.
Ballance died at home Thursday, according to his son, Jim. He had been in failing health.
Ballance's "Feminine Forum" became one of the most popular radio shows in Los Angeles after it debuted in 1971 on KGBS-AM.
Racy and confessional, the show drew many listeners, both male and female, with topics such as "Where did his love go and how did you know it was gone?" and "Are you a red-hot mama?"
"Feminine Forum" provoked anger among women's rights activists, who accused

Ballance of exploiting callers.

"The 'Feminine Forum' was really the forerunner to radio's Tom Leykis and Howard Stern," said Don Barrett, executive editor of LARadio.com.

In the late 1990s, Ballance caused another stir when he sold nude photographs of radio therapist Laura Schlessinger to a company that posted the photos on the Internet. Schlessinger, who had been a regular on Ballance's show, was outraged.

Bill Ballance Dead At Age 85
The legendary Southern California radio personality made his mark as one of the original "Swinging Gentlemen" at then-Top 40 KFWB/Los Angeles. Ballance was perhaps best known for his years as host of one of the first radio talk shows to target women listeners, The Feminine Forum on KGBS/Los Angeles in the late 1960s and '70s. His radio career also included stints at KMYR and KOA/Denver, KNX/Los Angeles and KFMB-AM/San Diego, where he spent his final on-air years before retiring in 1994.

Sahara Manoranjan is all set to launch its radio network that will be heard across the world. The move follows its purchase of four channels on the WorldSpace Satellite Network. To begin with, the radio channel will air Hindi film songs and programmes.

Meanwhile, the Sahara Manoranjan TV channel will be called SaharaOne from October 10.

Satish Menon, president, sales, marketing and distribution of Sahara Manoranjan, said that the project cost of SaharaOne radio services is estimated to be around Rs 1,500 crore (Rs 15 billion), which will be invested over a period of three years.

"The WorldSpace satellite network is gaining ground globally and a couple of radio receiver set manufacturers of the country have even begun manufacturing compatible radio sets. We aim to provide a whole range of radio services through the endeavour," he said.

With a potential of millions of radio audience across different demographies, India presents one of the greatest opportunities for the satellite radio market. SaharaOne Radio will play the leading role in spurring growth in a hitherto untapped market.

Added Menon, "We are confident that SaharaOne will be the future of media entertainment in India. Today, we have the unique opportunity to offer entertainment concepts across different avenues on a scale and magnitude never before seen in the Indian entertainment industry."

SaharaOne will be the umbrella brand across four major businesses of motion pictures, radio, television and special projects, he added.
Commenting on the movie production front, Menon stated that while 10 to 15 movies produced or jointly produced by Sahara Manoranjan have already been released, about 40 more are in the post-production stage.
"The plan over the next three years or so is to produce 250 movies, with about 40 movies this calendar year," Menon stated.

Probably not since (1) the president didnt "loose" his job over
presenting false papers killing a thousand troops and (2) a network
isnt licensed.

No, you are wrong. That study only examined news stories. 90% of Fox
programming is not news stories.

>

Fox's actual news stories may be close to the center, but the majority of
their programming is way right of center.

Yes, you are correct: while Fox is extremely right-wing, it is not a "news channel". Rather, it is Republican propoganda in the guise of entertainment loosely disguised as "news". Sort of like a neo-conservative Saturday Night Live, minus the humor. Or at best a political Jerry Springer or Howard Stern, with politicians etc. as the dysfunctional guests/entertainment.

> All except Fox and MSNBC are very far left of center.

True, if you are looking at things from the point of view of John Poindexter, Dick Cheney, or John Ashcroft (or the point of view of Rupert Murdoch or Roger Ailes). Some years ago one of the initiators of the "liberal media" myth essentially admitted that the media was "liberal" only because all of society was liberal form that person's point of view. These people wanted a definitively right-slanted media in order to influence society, not to reflect it. And they came up with the scam (which they are fully conscious of, even admitting publicly that it's a wonderful racket) of accusing mainstream media, which strives not to be biased, of being biased, when it is they, the accuers, that are actually biased and making no attempt to be fair. But if you keep saying it, people will believe it, right?

> People who say things like "Fox is right wing" are

You are naive enough to believe that Congress is a good reflection of the real world?

In the "real world", the large majority of the population disagrees with actual Republican policies in virtually every area, when they are each taken in isolation and stripped of rhetoric: universal health care, abortion, welfare, taxes, gun control, separation of church and state, education, drugs and crime, media ownership, environment, labor relations, workplace safety, civil rights, corporate accounting abuses, etc. But the right wing have become masters of deception and framing the issues in such a way that their bad positions are made to look good and their opponents are forced to debate on their terms. Continual mudslinging and misdirection of blame onto their opponents only helps their cause.

They also have their own right-wing "news" outlet in Fox, which doesn't bother with fact checking or even trying to tell the truth, freely mixes editorializing with "reporting", gives no time at all to balancing progressive points of view, and generally plays out the Republican leadership's philosophy that politics is war, to be won at any cost (get all the spoils and kill your opponents). There is nothing in the current Republican philosophy about building a better world or country, about benefitting the population as a whole, about accommodating different points of view, or about reasoned debate about policies. It is all about winning: disparaging and degrading your opponents and discrediting them and their points of view. Then you can get all the spoils.

And the mainstream media have played along: despite being "liberal" (if that's really the case: a 1998 study showed that the Washington press corps, at least, were more conservative than the general public on issues such as trade, taxes, Social Security, health care and corporate power, and the majority of newspapers have endorsed Republican candidates in virtually every election this century), individual reporters have been unable to provide accurate and meaningful information in the face of this propoganda blitz, largely as a result of their rules of proper journalism: since most of what Bush and his cronies say has a tiny grain of truth mixed with subjective opinion and gross exaggeration, they can't be called the liars they so clearly are (it's also not in the nature of journalists to make such accusations: rather, they try to present the facts and let the reader or viewer decide for him or herself; the Republicans know this very well). All journalists can do is put such statements up against what Kerry (or whoever) says in return, and hope the reader can judge. But with all the noise, misdirection, deception, outright lies, continual repetitions of untruths, accusations, and false impressions, it's difficult for anyone to tell what's true or not, and at best they may come away confused and not knowing whom to believe. See: http://www.fair.org/press-releases/swift-boat.html

Also, due to the massive, well funded and organized letter/email/phone/fax attacks the stations or papers receive any time anyone says or writes something not quite conservative enough, they've been cowed into taking a right-of-center view much of the time. (Not all of the time, but moreso than they would naturally.)

Even when they can do meaningful reporting, it often gets drowned out. See: http://www.fair.org/press-releases/cbs-bush-documents.html

Another reason reporting glosses over many issues is that the media is far more concentrated now than it used to be, and owned by major corporations. This is something that's happened without most people being aware of: most media in the U.S. are now owned by a small number of major corporations, due to relaxations in media ownership rules by the likes of Michael Powell (but starting many years earlier). Clearly there are many potential conflicts of interest when, for instance, NBC covers news about GE, ABC about Disney, or CBS about Viacom. (see http://www.fair.org/extra/best-of-extra/ge-boycott.html for one old example. There are plenty more, and the situation is certainly not getting better.) But in addition, large corporate media are concerned about keeping large corporate advertisers happy, and also about keeping the recipients of large political donations happy so that policies will move in the direction of unrestrained profit-making. "News" is really about profit, by way of being entertaining enough to hook an audience and hence major advertisers. None of this creates an atmosphere conducive to reasoned and penetrating reporting in the best interest of U.S. citizens.

> the Cold War.

You mean the Communists and Socilaists.

"Center" means what it means. Of course, to quote the
famous Centist Democrat, Bill Clinton, it all depends on the
meaning of the word "is".

Those that say "Fox News is right wing" are simply
misusing the word "is", not the phrase "right wing".
These people are living in the world of 50 years ago
when Communism and Socialism were actually active. Today,
Fox is centrist.

Doug McDonald

Actually, as I quoted from a scientific study, I am
correct.

People who think Fox is right wing are generally
from very close to the coasts, in areas where Fox really
is right of the center for that local groups of people.

Go to Alabama or Wyoming and you will find Fox to
be well to the left of the center of those people.
Limbaugh would be closer to their center. When
you average over the whole USA, as represented in
Congress, Fox is centrist.

Doug McDonald

Leonard, that is a very telling statement. Is that an observation of your own as I'd love to pass that along with proper attribution.

And if anyone can watch the majority of the Fox network, (90% of which would
not be considered news stories), and still say they are not biased way to
the right, I'd like to see their nose grow as they say it.

>Obviously they have some way to know that they are broadcasting to an

individual receiver, else (a) they couldn't sell and send signal to specific devices who pay and not to others and (b) they can deliver specific programming (Playboy channel, Opie and Anthony) to specifc receivers.<

No, they don't.  The system works the same way as an addressable cable box. Digital data streams are sent to the receiver to unlock certain channels.  The only way they could know what station the radio is actually receiving at any given moment would be for every receiver to also be a transmitter...and thus, in the case of satellite radio, every receiver would also need a dish which would automatically lock in on the nearest satellite.

>But - suppose I listen to 'non-premium' channels - for instance, I listen to 15 (folk music) on weekends and 7 (70s music) during the week, and 132 (C-Span) during rush hour.  Can XM track that information to a per-subscriber level?<

No.  Their business model doesn't require that sort of information, and as explained above it's impossible to obtain anyhow.

>(The reason I ask - I like 15-Folk and I hope that enough people listen to it to keep it on the air.)<

You have to let them know that by other means...most likely either request lines, e-mail or snail-mail.

Stan, something Bill never mentioned...when he came to LA from Denver
he was a summer relief ABC staff announcer, he wasn't very happy being
one of 22 announcers after being a star in Denver. I was also on staff
at the time, we became long time friends... rc

Did anyone use to listen to AFN Munich,Stuttgart etc.back in the early post war period,1946-50?
That was the only place to hear the latest records in those far off days."Bouncing in Bavaria","The March Of Dimes" yearly appeal etc."Dancing in the Dawn" by Woody Herman used to get me up in the mornings.

Wake up kiddies!

Even 1/10 watt FM is "pirate" radio! The FCC does not permit this "much" power! Perhaps 1/100 of a watt is more like it to get the max. allowable field intensity.

If you run 1/10 watt into an efficient antenna, be ASSURED you are breaking the law!

I am former Chief Engineer for a 100,000 watt ERP FM in Houston so I know what I am talking about.

73,

Meyer Gottesman, W6GIV
aka the infamous "Radio Crazy".

Actually, my response to his signature line was only met tongue in cheek.

He stated, 100,000 microwatts, which is only 1/10th watt.

I thought you had to be running respectable power, either 10 or 100 watts to qualify as pirate radio. In fact, 1/10th watt doesn't even require a license in the FM band.

Ed

CBS can't "loose" (sic) its broadcast license because it doesn't have one. The individual stations owned by Viacom do have licenses, but the network really answers to noone.  It only provides programming to its affiliate stations...therefore, nothing to "loose" (sic).

CBS doesn't have "a" broadcasting license to "loose". They do own a number of stations, though, that have licenses. I doubt a journalistic mistake like this would cause someone to lose their license. Their audience, perhaps.

In a word: no.

Nor will Dan Rather be fired.  Some underling will take the blame and get
fired instead.

It will otherwise blow over.  Being liberal means never having to say that
you're sorry (or admit being wrong).

Thanks to satellite and Internet-- Houston has a number of choices for classical music. That's probably one of the reasons KRTS cashed out. They're competing against the new technologies-- not just the non-comm down the dial-- for the classical audience.

Hello,

Does anyone have a / use a / listened to / a Cambridge Soundworks CD740 Radio. I have a poor AM/FM Band Radio signal level location that is up in the hills and down in a valley. The current Kitchen Radio is a Sony AM/FM/CD/Cassette Radio that has very poor AM/FM Reception. I would like to replace it with a Quality Sounding AM/FM/CD Radio that has a good tuner for improved reception and it must have a CD Player.

NOTE: The Cambridge Soundworks CD740 is listed as having separate

AM/MW 'external Antenna Input and a FM 'external Antenna Input.
CSW-CD740=>  http://tinyurl.com/riym
<http://www.cambridgesoundworks.com/store/category.cgi?
category=aud_radio&item=c174rczzz>

Cambridge Soundworks CD740 - How is the AM/MW Band Radio reception
using the built-in AM/MW Antenna ?
-  What about AM/MW Band Radio reception
-  using an 'external' AM/MW Antenna ?

Cambridge Soundworks CD740 - How is the FM Band Radio reception
using the built-in FM Antenna ?
-  What about FM Band Radio reception
-  using an 'external' FM Antenna ?

iwtk ~ RHF
.

CBS per se of course does not have a "broadcasting license". They
don't broadcast ... just produce shows.

They do own stations that need a license, of course.

And of course those stations will not lose their licenses.

The only way to lose a license is to frequently
use the works "fuck shit piss cunt tit cock " etc., on the air,
to show naked people, or to flagrantly and repeatedly run
at a higher power than authorized. It is exceedingly difficult
to lose a license.

There is one and only one way to easily lose a license,
and that is to get caught lying on an application.

On what basis would thier license be revoked? If getting the facts wrong in a news story where an offense (which it's not), I think every network in the world would be found guilty at one time or another. Should the networks which broadcast the Swift Boat Veteran's lies and fabrications be found guilty?

Within these hallowed halls, http://HireMe.geek.nz/ of <mikehack@u.washington.edu> added the following to the collective conscience:

> Will the US CBS Network loose its broadcasting license over the Dan Rather row?

I don't think CBS would loose their license, but they'll have hell to pay from parent company Viacom. I'm hoping they get spanked royally by

1) removing the CBS network
2) move UPN to CBS affiliates (making them UPN affiliates) folding the programming from CBS into the new UPN
3) former UPN stations run first-run syndicated programming from Viacom*

*Star Trek - The Next Generation from Paramount existed in first-run syndication and got good numbers

But that's just IMHO, YMMV. ;-)

I seriously doubt it.  Rather was set to "retire" in about 6 months, and at this point, it still looks like these documents were cut & pasted together.  His "leading the witness" tacts with the 87 year old typist was disgraceful.  Many of his peers are giving him a mulligan and won't really touch the (real) story... that Rather himself is a staunch Democrat and party fund-raiser.  This campaign has turned into a discgraceful mud-slinging contest and frankly... it started with the Democrats and they're spending $65 million in hard-line anti-Bush stuff like comparing him to Hitler.

If you caught the show last night on TV that was highlighting the "Iraq Oil for Dollars" card that many of our "allies" were playing in the UN, then you know why, with billions in graft lost when we invaded, they are reluctant to support the US.

This war sucks, but sooner or later it had to happen because everyone

```
was too willing to look the other way while Sadam was raking in money
left and right and looking to rebuild his military strength.

It doesn't have a license to lose.  Networks don't require licenses in
```

the U.S..

The stations that air CBS network programs do require licenses and are subject to sanction.  Some of these stations are owned by the CBS network - the majority aren't.

It's highly unlikely any of the stations will be sanctioned either. There's no evidence CBS knew the documents were fake before they were aired - indeed, there is evidence that they *weren't* fake - and even if they knew the documents were fake that hasn't been grounds for FCC sanction in the past.

There's no realistic way this would affect their broadcasting license, only their reputation.

For what? All they admitted to was making a mistake. They apologized
for that. So in today's Politically correct, all you have to do is say
you're sorry world, everyone will forget in a week or so.

No.

Networks are not licensed. Only individual stations are.

CBS's claim that it was duped will be accepted by all except (1) right-wing fanatics and (2) those who value the truth above politics, and life will go on as usual.

fredtv <fred@fredcantu.com> had written:
|
| Thanks to satellite and Internet-- Houston has a number of choices for
| classical music.  That's probably one of the reasons KRTS cashed out.
| They're competing against the new technologies-- not just the non-comm down
| the dial-- for the classical audience.

The movie has played before. KLEF (94.5) went to oldies of the
non-symphonic variety in 1986. It donated its classical record
library to KUHF, which flipped from its all-jazz format as a result.
There were howls in all directions, ultimately to no effect.
It did cause the Houston Chronicle to rediscover radio as a topic of
coverage for a few months.

We are trying to decide on new processing. We are replacing an aging 8100/xt combo. We are trying to keep the price to around 7000.00 max. I have had the opportunity to play with a couple different boxes the past few days. The boxes are an 8200 SIG, and an Aphex 2020 MK III. I was suprised by the results. I was a little skeptical about trying the Aphex box. I always heard about Compellors and Dominators, but there never seemed to be a lot of "jumping up and down" about the 2020. I've come to find out that the original 2020 left a lot on the table as far as loudness is concerned. I've gotta tell you the 2020 MK III is a very sweet sounding box and loud. Compared to the 8200 the 2020 sounds very very clean and punchy. The high end on the 8200 sounds kinda gritty. The high end on the 2020 sounds very smooth and crisp. Makes me wonder why people aren't buying up MK III's. I did notice the AGC section on the 8200 can be pushed much more aggressively than the 2020. 20db sec release time on the 8200 compared to about 5db sec on the 2020. I could never imagine using something that agrressive though, especially in an AGC section. ANYWAY HERE'S MY QUESTION. Is the sound I'm hearing from the 8200 typical from digital boxes or just from the 8200. I've read that the 8200 is a love hate type thing, but always figured it had to be pretty good to sell as well as it did. I've gotta be honest, I'd take a 8100/xt combo or the 2020 anyday over that box. Which brings me back to my question. Does analog always sound much sweeter than digital? I'm thinking of demoing an 8300. How does the 8300 sound in comparison to the 8200? I'm guessing it probably sounds completely different. Does it have a "sweeter" sound or does it also have a rather "numerical" sound also? How do the Omnia's stack up against the Orban digital boxes? Who knows we may end up buying an Aphex box, but I've been an Orban fan for about 26 years.

Thanks for your time,

Travis

There've been more than a few stations recently flagrantly & repeatedly
running excessive power -- and still hold their licenses.

> It is exceedingly difficult to lose a license.

This is a major understatement<grin>!

Unlike the graft that Haliburton was involved in? Oh, I forgot, they set up
a supposedly separate foreign corporation to handle the graft.

>

Really? I thought we invaded because he was an imminent threat to the United
States and was involved in 9/11. Turns out neither was true. Now, Iran and
Korea certainly are developing weapons of mass destruction. When's the
invasion? Oh, I forgot again. We only invade third rate contries that have
no real army or defense. It's like looking for your lost car keys 50 feet
away under a street light because the light's better there then where you
really lost them.

Life is going to be hell for Viacom for the next 4 years if Bush is reelected. It just goes to show... that if you're going to attack the king, you'd better make sure to kill him.

I know of one station that operated on an unauthorized frequency, from an unauthorized site, with an unauthorized pattern and power, and significantly interfered with a major station for more that a year.  Complaints to the FCC did no good.

Eventually the FCC told them to stop, pay a modest fine, and they were eventually licensed on the new frequency after really building the authorized facilities.

As Doug says, it's hard to lose a license.

The only case of a lost license in my area was a case of obvious lying to the FCC. That was close to 20 years ago.

I know of two... WRHC in Miami (Coral Gables) and 106.5 in Culebra, PR, which was reassigned to 98.9 but built and ran on 106.5 anyway.

If you'd been following the story, the source, Burkett, was the one responsible for the misrepresentation, as he claimed that he was "pressured" into providing the name of the source, for the purposes of determining provenance for the documents in question. This is appropriate journalistic practice. While CBS does hold some responsibility for failing to fully prove that Burkett's claims were true, the fault for the hoax lies fully with Burkett, who could have easily told the truth about the documents' source. Holding Rather and CBS solely responsible for this fiasco is like me holding you responsible for the lies we've been told by the Bush Administration.

But then, I do.

I was recently on a cross country car trip and did some extended listening to Delilah.

I hadn't heard her in a while.

She was talking to a caller who was praising her "wonderful advice", and said to the caller:  "If I'm so good at giving advice, why don't I have a spouse?"

Now, I remember when Delilah was just starting out in syndication, she had just gotten married.  (She had been married previously in an abusive relationship, which she always shared with listeners.)

Anyone have a clue what happenned to husband #2?

Thanks

Curious listener

Since I don't recall using that term I'll assume I'm not the Rich to whom you refer. To answer the question: no.

Not being paid could mean a lot of things, depending on his contractual arrangements. Is he an employee or independent contractor. Is he paid a salary plus a share of revenue or just revenue? It could be that there wasn't any revenue. Unfortunately, that's happened to many people in syndication where they couldn't meet ad agency requirements of 85% national coverage.

Most small networks are packaged with others and the revenue split among them.

Rich

# AL FRANKEN AND BOB EDWARDS TO APPEAR ON "THE COMEDY-O-RAMA ELECTION SPECIAL"

TUESDAY, NOV. 2 FROM 6:00 � 8:00 AM, 2:00 � 4:00 PM, AND 10:00 PM - MIDNIGHT
SATURDAY, NOV. 6 FROM 7:00 - 8:00 am and 7:00 - 8:00 pm (ALL TIMES EASTERN)

ON XM SATILLITE RADIO'S SONIC THEATER CHANNEL 163

September 21, 2004, Napanoch, NY � Spend this Election Day� LAUGHING when satirist and radio talk show host AL FRANKEN and veteran public radio host BOB EDWARDS portray themselves on "THE COMEDY-O-RAMA ELECTION SPECIAL". The two-hour special begins with HOMELAND SECURITY COMES TO CAMP WATERLOGG", which producer JOE BEVILACQUA calls "hybrid radio" (equals parts radio theater, satirical sketch comedy, improvisation and interview), and concludes with a set of DAWS BUTLER stories. The special airs multiple times beginning November 2, on XM SATILLITE RADIO'S SONIC THEATER CHANNEL 163.

"We're trying to have a little fun, something for which today's radio is not exactly known," explains Bevilacqua, who was a prot�g� of Daws Butler (the voice of Yogi Bear), provides many of the voices on the series, and has been writing, producing and performing radio comedy since 1979. He likens his work to the modern equivalent of Fred Allen, Jack Benny and Fibber McGee and Molly. "In 1930s and �40s, these show weren't just funny. They created entire imaginary worlds that tickled the imagination," notes Bevilacqua.

Radio listeners will spend the first hour with Ranger Joe and Ranger Lorie at their dilapidated Catskills kids camp, "Camp Waterlogg," located in the bucolic woods of Napanoch, New York. While Ranger Joe is off talking with Al Franken, Ranger Lorie must contend with a wacky cabal of nutcases (mostly played by Bevilacqua), the day before the Presidential Election. Meanwhile, Bob Edwards reports on the events occurring at the fictional camp. (This is the second "Camp Waterlogg" story; the first was a Fourth of July special. More are planned.) On Election Day only, a second hour will the best of "What the Butler Wrote: Scenes from the Daws Butler Workshop".

For Al Franken, (whose AIR AMERICA radio show airs from noon to 3 pm Eastern time, on XM Satellite Radio's America Left Channel 167) appearing on the show was a no-brainer. After all, "the only thing more liberal with comedy than me is �THE COMEDY-O-RAMA HOUR'," explains the Saturday Night Live alumnus.

Bob Edwards says he is thrilled to be on Election Day special and reminds listeners that it is their "patriotic duty to laugh!" When introducing his own new talk show (which premieres October 4, on the XM Public Radio Channel 133), Edwards beamed, "XM is the most exciting thing happening in radio. I think XM is reviving and reinventing radio. It's something entirely new, and at the same time it brings radio back to its past glory."

In addition to Franken and Edwards, the special will feature some of the best new political humor in the country, from The New Liquid Comedy improv group (featuring Joe Bevilacqua, Lorie Kellogg, Cousin Kenny Savoy, Jim Folly, and Tom Giannazzo), musical satirists JibJab.com, writer-actor Sharon Greene of The Neo-Futurists theater troupe, radio theater producer Jeff Ward, actor-impressionist Matt Hurwitz, singer-songwriter Hugh Blumenfeld, and others. Plus, there'll be a look at political satire of the past with a rare 1956 Stan Freberg-Daws Butler sketch that eerily predicts television's future impact on political conventions.

The Comedy-O-Rama Hour is a weekly audio magazine of humor and stories about humor, written, produced and hosted by veteran radio producer Joe Bevilacqua. The show includes original sketch comedy, radio theater, satire, parodies, monologues, storytelling, standup comedy, songs, mini-documentaries and interviews, and airs five times a week on XM Satellite Radio's Sonic Theater Channel 163, as well as public radio stations around the country. The special will also be made available streamed on the web at: www.comedyorama.com.

"The Comedy-O-Rama Hour is one of the most unique and original productions out there these days. With Joe's talent for different voices, I never know what's coming next, or what it will sound like. Another thing that makes these shows stand out is that it is quite obvious to the listener that Joe and his cast are having fun making these shows, and that makes them fun to listen to as well." - Steve Karesh, Program Director, XM Satellite Radio Sonic Theater Channel, 163.

"THE COMEDY-O-RAMA ELECTION SPECIAL:
HOMELAND SECURITY COMES TO CAMP WATERLOGG"

Produced and directed by Joe Bevilacqua
Written by THE NEW LIQUID COMEDY: Joe Bevilacqua, Lorie Kellogg, Kenny

Savoy, Jim Folly, and Tom Giannnazzo.

Radio listeners will spend the first hour with Ranger Joe and Ranger Lorie at their dilapidated Catskills kids camp, "Camp Waterlogg," located in the bucolic woods of Napanoch, New York. While Ranger Joe is off talking with Al Franken, Ranger Lorie must contend with a wacky cabal of nutcases (mostly played by Bevilacqua), the day before the Presidential Election. Meanwhile, Bob Edwards reports on the events occurring at the fictional camp. (This is the second "Camp Waterlogg" story; the first was a Fourth of July special. More are planned.) On Election Day only, a second hour will feature two installments of "What the Butler Wrote: Scenes from the Daws Butler Workshop".

CAST:

Joe Bevilacqua:
Ranger Joe, show announcer, Virginia Kellogg, Woof Blizzard, Ralph Backwards, Steven the Security Guard, Ellis the Boat Keeper, Junior Ranger Rich, commercial announcer, Haurel and Lardy, Ted "Yogi Bear" Smith, protesters, various chipmunks

Lorie Kellogg: Ranger Lorie, Olive Pitts, The Baby of the Woods, Squeeky, Mrs. Terwilliger, commercial announcer, the official voice of U.S. Terror Alerts, Bush ad spokesperson, protesters, various chipmunks

Kenny Savoy: Stinky

Jim Folly: Ronald Drysdale, Department of Homeland Security

Tom Giannazzo: Tom Ridge, Department of Homeland Security

Matt Hurtwitz: Dan Rathernot, Tom Brokitall

Al Franken: himself

Bob Edwards: himself

FRIDAY, NOVEMBER 5, 5:00 � 6:00 AM, 1:00 PM, 9:00 PM
SUNDAY, NOVEMBER 7, 8:00 AM, 8:00 PM

---

## JOE BEVILACQUA BIO

Joe Bevilacqua first wrote Daws Butler (the voice of Yogi Bear) when he was 16 years old in 1975. Soon after, Daws appointed himself Joe's personal mentor and thus began a whirlwind 13-year apprenticeship. Bevilacqua has gone on to become is a veteran award-winning voice actor, radio producer, dramatist, humorist and documentarian.

His credits include such documentaries as From Moonshine to Armadillos: the Birth of the Austin Music Scene (2003), One Song at a Time: Tales from the Kerrville Folk Festival (2000) and We Take You Now to Grover's Mill: The 50th Anniversary of the War of the Worlds Broadcast (1988). His documentary Lady Bird Johnson: Legacy of a First Lady (2001) was heard in nearly 200 public radio stations and was a finalist for best documentary at the 2001 New York Festivals competition.

He is a frequent contributor to National Public Radio, and, in 2004, was awarded a Silver Reel Award from the National Federation of Community Broadcasters for his personal essay A Guy Named Joe Bevilacqua.

Bevilacqua has written and produced hundreds of radio plays, including the popular comedy series, The Misadventures of Sherlock Holmes (which he co-wrote with Daws Butler) and his pet project--The Whithering of Willoughby and the Professor, 18 surrealistic half-hours in which he performs all the characters himself.

He currently hosts, writes, and produces a weekly program, The Comedy-O-Rama Hour, for XM Satellite Radio's Sonic Theater Channel (163), which includes a regular segment called "Scenes from the Daws Butler Workshop."

Along with Ben Ohmart, he co-edited a book of Daws Butler scripts entitled Scenes for Actors and Voices in 2003 and in 2004 co-wrote the authorized biography: Daws Butler: Characters Actor.

Bevilacqua and his wife, Lorie Kellogg, recently renovating their cabin in the woods of Napanoch, NY, to look like a Jellystone Park Ranger's Station, where they live with their three dogs, George, Gracie and Zasu, and their two cats, Ignatz Mouse and Krazy Kat. Their unusual home is the inspiration for Bevilacqua's latest radio comedy creation: "Camp Waterlogg," about a dilapidated Catskills kid's camp populated by a cabal of crazy characters. The new series, which airs on XM Satellite Radio's Sonic Theater Channel 163, marks the on-air reunion of members of the "Liquid Comedy" Improv troupe: Bevilacqua, Kenny Savoy, Jim Folly, and Tom Giannazzo, who have not worked together since 1979.

They need to worry about Bush sending the troops to the NBC
headquarters before worrying about their license.

The Afghanistan war is worth fighting because Bin Laden was there. The mission failed, and the troops were already in the area. So he wanted to find something else to do. What is better than finishing his father's job? The WMD and tie to 9/11 were all made up by the liar to justify the war. Should we call this Iraq-gate?

"McWebber" <mcwebber@my-deja.com> wrote in message news:<cipori$sqe$1@xuxa.iecc.com>...

> Really? I thought we invaded because he was an imminent threat to the United States and was involved in 9/11. Turns out neither was true. Now, Iran and Korea certainly are developing weapons of mass destruction. When's the invasion? Oh, I forgot again. We only invade third rate contries that have no real army or defense. It's like looking for your lost car keys 50 feet away under a street light because the light's better there then where you really lost them.

(The "Radio Crazy" is baaaaaakkkkk!!)

For sale: Partial interest in AM daytimer in small Alabama city. 1 KW, high dial spot, non-directional. Sunrise to sunset. That is it. Not one watt at night!

NO real estate is included, kiddies! Asking price is only $60,000 cash or $75,000 on terms with seller financing.

This is a joint venture and you could lose all or part of your investment since there is an element of risk.

I am NOT a shill, broker, agent, owner, part-owner or employee of the station.

Active or inactive investors with at least $5,000.00 (Five grand) each are welcome. All investors would be on the board with full voting rights, if desired. No individual can own over 49 percent. We want no bullies. This applies to me too!

Call letters and city of license will be disclosed to those showing more interest. Call or email, please.

Tel: (478)741-1710 in Macon, GA

Please, no "AM bashers" or other negative nabobs!

73,

Meyer Gottesman, W6GIV
aka The "Radio Crazy"

>make millions with the technology, it's God's gift to radio.

At today's FCC, sound engineering practice is irrelevant.  Only money
talks.

Hello
The Black Avenger had a heck of a web site in the mid-90s but it went down
the tubes and was a shadow of its former self.  His books perked interest
and I have one of them.  I'd love to know what happened to him.

>>
A Franklin radiator looks like two self-supporting towers, one inverted on top the other, fat ends touching.
>>

Nope.

A Franklin is defined as a center-fed sectional, which is 180 degrees over 180 degrees. The base of the bottom section is connected to the ground system by an impedance, usually a capacitor.

KSTP's Franklin is not a Frankin on account it is 179 degrees over 179 degrees.

A true Franklin has an efficiency of 510 mV/m/kW at 1 km.

KSTP's certainly equals that, although it is classified by the FCC as a conventional sectional.

KDKA's sectional is just that.

As was WOAI's. 120 degrees over 120 degrees.

WHO's radiator isn't a Franklin, either, it is a "WHO Type", and is so classified by the FCC. It is 300 degrees tall.

A true Franklin has the best horizontal field of any radiator.

A WHO-type radiator probably has the best anti-fading performance of any radiator.

press release date: 3 September 2004
ref: 214

http://www.ukdigitalradio.com/press/display.asp?id=214

The BBC is continuing to roll out its national digital radio network, in a bid to reach 85% population coverage.
Here's a list of transmitters that have recently been switched on.

Beacon Hill - Torbay and Devon
Bincombe - South Dorset area
Charing Hill* - Sittingbourne and Faversham
Danbury - Chelmsford area
Darvel - Ayrshire area
Durris - Aberdeen area
Keighley - Aire Valley and West Yorkshire area
Kirkton Mailer - Perth area
Lancaster - Lancaster and Morecambe area
Madingley - Cambridge area
Meldrum* - Peterhead area
Morecambe Bay - Barrow in Furness area
Mounteagle - Inverness area
Pendle Forest - Burnley and Colne Valley area
Purdown - Bristol area
Ridge Hill - Herefordshire area
Stockland Hill - East Devon, Somerset and Dorset
Wickhambrook* - Saffron Walden area

The national commercial digital radio network also broadcasts from all of the above transmitters, except for those marked with a star*.

Listeners in these regions who want to receive the additional stations should rescan or auto-tune their DAB digital radios.

Mine too. Had the opportunity to choose a few years ago for a new AM, and
went with a Nautel 100 kw with a 30 kw aux. Defintely a better sound.

So it is asymmetric, with the two sections slightly different lengths, or the base capacitor is used to compensate for that?

If it were in free air, it would simply be a vertical dipole, but since the ground is below it, the electrical lengths of the bottom leg is changed, right?

>KSTP's Franklin is not a Frankin on account it is 179 degrees over 179 degrees.

What does this do to the pattern in real terms?

I think there are a couple. New Hampshire (WFEA?), WSM, WLW, and the WBT
installation. WADO took theirs down when the new 50 kw DA was built 3-4
years ago.

Too bad YOU were not one of them.    Will you PLEASE put me in your kill file?

> Try sticking to one group.

Just as YOU have crossposted when YOU hit reply, that is all I am guilty of.    I did not start the thread.    All I did was compliment the poster.

Somehow you have taken real offense at my compliment to this other person.

I wonder why?

(I KNOW why!)

Hey Everyone,
Do any of you have them on CD? Tape? Record? Please let me know. If anyone has any please contact me. I will be excited if you could mail

them to me.

Chris

>>
If it were in free air, it would simply be a vertical dipole, but since the ground is below it, the electrical lengths of the bottom leg is changed, right?
>>

It's not a dipole over a perfectly reflecting earth because: 1) the top section is series excited from the center of the coax feed line through a network, 2) the outer cover of the coax feed line is directly connected to the top of the bottom section, and 3) the bottom of the bottom section is connected to the ground system through another network, usually just a capacitor.

This results in the current distribution being changed such that: 1) the horizontal field is greatly increased over that of a 180 degree radiator, and 2) the vertical field is greatly reduced over that of a radiator which is taller than 180 degrees.

Ordinarily, a 225 degree radiator has the maximum horizontal field, but such a radiator also has a very significant vertical field ... significant enough to cause loss of primary service area due to the reflected vertical field being approximately equal to, but of opposite polarity to the horzontal field at its extremes.

Hence, 200 degrees is normally the tallest conventional vertical radiator used for Class A stations.

And, Class A stations which use an unsectionalized radiator taller than 200 degrees do so at their peril.

(There are only two such cases within the U.S., and I don't know of any outside of the U.S.).

>>
> KSTP's Franklin is not a Frankin on account it is 179
> degrees over 179 degrees.

What does this do to the pattern in real terms?
>>

Nothing, which is why I also stated that a true Franklin and a Franklin-type sectional which is just a tad shorter than a true Franklin (the KSTP day radiator case) BOTH have an efficiency of 510 mV/m/kW at 1 km.

Have you tried Google? I mean, really tried Google beyond just typing
in "Dr. Don Rose"?

I came across one site of Philly Boss Jock info that say Rose (who I'm
sure you knew was at one time a Philly boss jock) is retired and
living in Concord, CA.

Ensigma - a division of Imagination Technologies - is demonstrating Electronic Programme Guide (EPG) support for DAB digital radios at the International Broadcasting Convention (IBC) in Amsterdam.

Ensigma's EPG receiver and front-end software enables users to browse programmes for a single station or all programmes on at a particular time, and to select them for scheduled listening or recording to SD memory card. The EPG is being demonstrated on the advanced Bug DAB digital radio from PURE Digital, which is already widely commercially available.

Says David McBrien, VP Business Development, Imagination Technologies:

"The EPG enables radio listeners to search the listings of digital stations they receive, then select a programme, or set a reminder up to seven days in advance. It brings the functionality we now take for granted in digital television broadcast to DAB digital radio and is set to permanently change the way listeners interact with their radios."

Both Ensigma and PURE Digital have been actively involved in the WorldDAB EPG TaskForce's development of a new open standard EPG. Field trials have been in progress in the UK and Canada over the last few months and broadcasts of the new EPG format will be on air from Q4 2004. PURE Digital is expected to have the first EPG-enabled consumer products, starting with a software update for The Bug by the end of 2004. The USB-enabled Bug radio can be upgraded with new functionality by the user using software downloaded from PURE's website.

IBC is the world's leading event for professionals involved in the creation, management and delivery of entertainment content and will take place at the Amsterdam RAI from 10 - 14 September 2004.

By Wayne Bledsoe, bledsoe@knews.com
September 15, 2004

Federal Communications Commission agents, along with U.S. marshals, raided pirate radio station KFAR this morning.

The agents shut down the station in Vestal about 10:30 a.m. and began confiscating all of the 2-year-old station's equipment.

KFAR (Knoxville First Amendment Radio) has no broadcasting license or any official management. Until last February the station's antenna was mounted in the top of a tree.

The station, which broadcasts on 90.9 FM and was heard across much of Knox County, had been visited twice by agents from the Federal Communications Commission, and DJs had been told to stop broadcasting.

They complied - for a while - but then returned to the air more determined than ever.

Three FCC agents silenced the station's broadcast signal while three marshals stood by.

KFAR posted a raid alert on its Web site when the agents arrived.

None of the dee-jays give their names to avoid fines.

In addition to possible fines being levied at an individual, any person found to have been broadcasting illegally is automatically barred from ever being granted a broadcasting license.

KFAR has few rules: No racist, sexist or homophobic language, and do not offend community standards before 10 p.m.

The station's lineup includes shows that feature many different styles of music and shows sponsored by various left-wing political and social groups. Cricket points out that there are at least two DJs who play Christian music and at least one who plays anti-abortion songs.

Monday September 13th 2004

Paul Billingham reporting:

http://www.offshoreradio.de/

I wondered if you could mention our Radio Sutch RSL which we hope will be on air this time next year. I have canvassed one or two people who knew Screaming Lord Sutch, and one chap who actually helped with transmissions from the Shivering Sands army fort in 1964. But we need more enthusiastic folks to join in!. We will be discussing this event at the Official Monster

Raving Loony Party conference which is being held on the 1st to the 3rd of October at the Dog and Partridge pub at Yately Hampshire.

We have kindly been given permission to broadcast from the Red Sands Fort complex by Project Redsands, who have just had these forts surveyed. They have a lot of work to do to make access to these forts safe and practicable, but huge heavy equipment is not needed these days anyway. We would welcome aboard anyone who has an interest in early offshore broadcasting whether they can man turntables, fuel a generator, rig an arial or are interested in any way. We want this broadcast to be a tribute to David Sutch, as well as a lot of fun for the listeners and those involved in making it work.

We hope to transmit on AM, which given a good antenna and the almost perfect transmitter site on the control tower should reach a wide area as well as much of London. We intend to play a lot of Rock and Roll, have readings from filthy novels, and include speciality acts such as jugglers, ventriloquists and possibly cookery programmes as well (we are monster raving loonies outside of elections as well).

Any interested parties can reach me at melaniespar@aol.com, or phone me on 07766164976.

By Gerry McLaughlin

North West Radio has announced it will stop broadcasting on October 1.

But the station is to continue with its Supreme Court action against the BCI.

And until this legal action is resolved incoming station Ocean FM cannot go on air.

The end of the road came following a board meeting on Friday in Sligo when it was decided that the station would cease broadcasting on the last day of its current licence which expires on September 30.

The meeting also decided that the station will still go ahead with a Supreme Court appeal against the Broadcasting Commission of Ireland's decision to take away its licence.

The appeal has been listed for mention in the Supreme Court on October 8.

The station has already lost a High Court application for a judicial review against the BCI's decision.

This means that Ocean FM will not be able to begin operating until this appeal has either been heard or withdrawn.

If North West go ahead with their appeal then it could take until the end of October to reach a conclusion.

The BCI will not sign a contract with Ocean FM while court proceedings are pending.

When contacted yesterday evening (Monday), a North West Radio staff member said he was not aware of their board's decision to go off air.

It is understood that redundancy talks have not yet taken place between management and staff.

Meanwhile, Ocean FM station manager Robert Walsh said they are going ahead with preparations to go on air on October 1. He said: What NWR says is of none of my business. But it is my business to ensure we are ready to go on air on October 1 and we are now busy with training of staff. And we are four days ahead of schedule with this training".

The decision by NWR to quit marks the end of almost 14 years broadcasting in the region.

North West Radio began operating from the Market Yard in Sligo on Friday November 2, 1990.

This was exactly 12 months after the pirate stations closed down in Sligo. And this was 13 months after Rosses Regional Radio won the original franchise.

This grouping which included the Sligo Champion and the Leitrim Observer handed the license back because they felt it was not profitable.

When this happened, NWR stepped in and launched Sligo's first legal local radio station.

Most of the station's first shows like Ita McMorrow's "Airs and Affairs" and Adrian Eames "Drivetime" have passed into history.

But others' like Tommy Marren's morning show are still an intrinsic part of the station's programming, attracting tens of thousands of listeners every morning.

Meanwhile, Ocean FM station manager Robert Walsh said they are going ahead with preparations to go on air on October 1. He said: What NWR says is of none of my business. But it is my business to ensure we are ready to go on air on October 1 and we are now busy with training of staff. And we are four days ahead of schedule with this training".

Radio Urban Legend? Hoax? Hero?

The story about Dave Rabbit goes something like this: he was an Air Force sergeant who stayed behind in South Vietnam after serving a one-year hitch in the military. Apparently, he operated a pirate Radio station in 1971 and broadcast a show called "Radio First Termer" for the purpose of serving U.S. service men and women during the end of the Vietnam War.

Rabbit aimed his broadcasts at English-speaking personnel in South Vietnam and presented an anti-war stance as an alternative to AFVN. He was known to be pretty raunchy and played what was then referred to as "Acid Rock" music.

Dave Rabbit's real identity has never been established. Some of the people who have been suggested to have been Rabbit include:
Roger Abbett (known as Rabbett) who runs "Internet Radio Hawaii", although he denies it.

Radio talk show host, Art Bell, because it is known he operated a Pirate Radio station on Amarillo Air Force base. But that connection is somewhat flimsly.

TV host Pat Sajak, who was a Disc-Jockey for the military in Vietnam during the war. Again, this is most likely wild speculation, especially since Sajak was a legitimate military broadcaster.

Not much else is really known about Dave Rabbit except he had an assistant named Pete Sadler, who probably doubled as an engineer and a female named "New Gin", helped out.

Dave Rabbit broadcasted at 69 MHZ on the FM frequency.

Even is the aerial is bad, it does not matter, because the ERP is the
licensed value, so a bad aerial can be used with more transmitter power :-)

No. Reading you in the newsgroup is like reading the comics in a
newspaper. It's very entertaining to read your ranting.

Existing subscribers to the radio service will have to pony up another $3.99/month to get the Internet service.

Also, although it hasn't been posted on the corporate Web site yet, word on the generally reliable fan site xmfan.com is that XM will be returning at least one of the channels it has dropped over the past year as an Internet-only offering. The channel being mentioned is Special X, whose format was generally described as "weirdness" -- polkas, William Shatner singing, old Mrs. Miller records, foreign language stuff that sounds "bizarre, man" to you average stoner college sophomore. XM dropped it back in February, saying its surveys showed a negligible audience. Apparently, XM now sees that negligible audience as a potential ... well, not cash cow, more of a cash heifer, devoted fans who'll pay to hear what they once got as part of their basic subscription.

As the third major hurricane in two months crossed the Caribbean Sea, radio amateurs in the region have once again been in action, providing emergency communications. The Hurricane Watch Net has been in almost continuous operation on 14325kHz for over three weeks. It coordinates its activities with WX4NHC at the American National Hurricane Centre, which gathers real-time weather data and damage reports from radio amateurs in the path of the hurricane.

In Cuba, IARU Region 2 Emergency Coordinator Arnie Coro, CO2KK, praised the Hurricane Watch Net for its outstanding efforts in collecting ground-level weather data from stations in Cuba. CO2KK was the Hurricane Watch Net liaison station. He and many other Cuban amateurs were active in providing communications as Hurricane Ivan passed over the north-western end of the island. Arnie said that nearly 800 Cuban amateurs were involved in handling emergency traffic related to Hurricane Ivan. He spent some 55 hours in continuous operation handling emergency traffic to the affected area.

In the Cayman Islands, HMS Richmond was moored off Grand Cayman but had no communications to shore to direct its humanitarian relief efforts. A member of the Hurricane Watch Net called London to get a satellite telephone number for the governor of the Cayman Islands, which was relayed to the Richmond via the net. The Hurricane Watch Net was also able to advise the Richmond that it was possible to land an aircraft on the Grand Cayman airport runway. It had been assumed the runway was unusable until the net learned from a private pilot that it was still possible to land there.

As Hurricane Ivan threatens the US Gulf Coast, the Amateur Radio Emergency Service there is being placed on standby alert. Local Emergency Coordinators are establishing VHF and UHF repeater nets and monitoring the emergency frequencies of 3965 and 7243kHz.

A longer version of this news story is available on the ARRL website.

### Amateurs Handle Emergency Comms in Wake of Hurricane Ivan

As the third major hurricane in two months crossed the Caribbean Sea, radio amateurs in the region have once again been in action, providing emergency communications. The Hurricane Watch Net has been in almost continuous operation on 14325kHz for over three weeks. It coordinates its activities with WX4NHC at the American National Hurricane Centre, which gathers real-time weather data and damage reports from radio amateurs in the path of the hurricane.

In Cuba, IARU Region 2 Emergency Coordinator Arnie Coro, CO2KK, praised the Hurricane Watch Net for its outstanding efforts in collecting ground-level weather data from stations in Cuba. CO2KK was the Hurricane Watch Net liaison station. He and many other Cuban amateurs were active in providing communications as Hurricane Ivan passed over the north-western end of the island. Arnie said that nearly 800 Cuban amateurs were involved in handling emergency traffic related to Hurricane Ivan. He spent some 55 hours in continuous operation handling emergency traffic to the affected area.

In the Cayman Islands, HMS Richmond was moored off Grand Cayman but had no communications to shore to direct its humanitarian relief efforts. A member of the Hurricane Watch Net called London to get a satellite telephone number for the governor of the Cayman Islands, which was relayed to the Richmond via the net. It finally happened. Houston's only commercial classical music station, KRTS 92.1, is dark. Well, not exactly. It is now KROI, with a format of the worst music of the Nam era -- the whiny, twangy crap.

Strange, though. The FCC's data base still shows KRTS on 92.1 with the owner as KRTS, LP. KROI is shown as unassigned.

I recall that Clear Cut was to buy this station.

This station in Seabrook, TX, southeast of Houston, had changed formats and call signs several times in its 25-30 year life, but KRTS with classical music had lasted for at least ten years.

An NPR station is now the only classical music station in the Houston area.

Bill in SE Texas

The MSF 60kHz Time and Frequency signal broadcast from the BT Rugby radio station ( http://www.npl.co.uk/time/ ) will be closed down from 9.00am on Monday 20 September 2004 until 9.00am on 4 October. The interruption to the transmissions is required to allow maintenance work to be carried out in safety. The service will be restored overnight whenever possible, but this will not always be feasible as extensive work is required on the aerial masts.

The MSF transmitter has an estimated equivalent monopole radiated power (EMRP) of 15kW and the horizontal radiation pattern is substantially omni-directional. The signal provides a field strength exceeding 100 microvolts/metre throughout the UK, and it can be satisfactorily received throughout much of north and west Europe.

There's a longer version?!  It already set a record for a press release.
I gather somebody wants to take the frequencies away.  Jeez, talk about
pointless self-importance.  You could get even better emergency communications
by putting up more cell phone towers and not have to suffer through the
press release.

Look for a ``Car-jackers Handle Emergency Transportation'' release from
civil rights organizatons.

Yes really sad.
Lived in Houston for nearly 40 years now,..., for the 4th largest city
in the U.S. this town has the worst radio line up on AM or FM.
On FM except for KUHT , the Pacifica station and a little Jazz
station, all the rest is cookie cutter clones.
On the AM dial there are only two large stations, and one of them is
'reactionary radio', lord! I don't see how they keep their advertising
base with endless elaboration of closed box thinking!

The FCC is notoriously slow to update its on-line database.

>
>I recall that Clear Cut was to buy this station.

The station was purchased by Radio One, not Clear Channel.  As
reported in Radio & Records, the new KROI, which joins CHR/Rhythmic
KBXX and Urban AC KMJQ in Houston in Radio One's Houston cluster, will
go head-to-head against Clear Channel's crosstown Hot AC KHMX (Mix

96.5).

Your opinion.

> KRTS, LP. KROI is shown as unassigned.

You did not search well enough.

>
> I recall that Clear Cut was to buy this station.

No, it was not. ever. Radio One bought it, and the calls stand for Radio
One, Inc.
>
> This station in Seabrook, TX, southeast of Houston, had changed formats

But the owner wanted to cash out, which is his right.
>
> An NPR station is now the only classical music station in the Houston
> area.

Leaving it with more classical than most US markets.

That, or that's all he'll admit to in public.  "What?  My transmitter was set to
1kW?
It wasn't supposed to be, although that explains why my electric bill has been so
high!"

(No aspersions or accusations intended to Rev Chrysafis...for all I know, he's
okay.
But I'd bet that's been a frequent defence for those with less than honourable
intentions.....while the transmitter room has dud 4CX5000s sitting around.  Not
that
ignorance of radiated power output is a workable defence when it's apparent that
measures were taken to maximise that output, for the sake of a workable coverage
area.)

I agree with you, Al. And thanks to David and, especially, Mark for the details.

There are two jazz stations in the Houston market. My favotire is KTSU, a university station on 90.0. It has cool jazz and blues, among other things.

The other is KHJZ, smooth jazz (which I don't care as much for) on 95.7. They really bug me with their constant cutsie imaging --The Wa-a-ave, even between selections in the alleged sets.

I like the Sunday jazz brunch on Clear Channel's Sunny 99 (99.1). I don't recall ever hearing its call letters. I guess I'll look 'em up in the FCC data base. It does play better rock classics than KROI does.

I'd listen to big band KBME on 790 AM, except its signal is weak where I live. Too, it has many more commercials since the production group got tossed from its format-changed FM home.

(I'm listening to New Age music on KUHF right now. <G>)

Hi Larry,

Audioarts make a great console IMO.  I am installing a D7012 right now and am still impressed with it (given a better budget though, I'd take an actual Wheatstone everytime).  Speaking directly to the D16 - do you have more sources than input channels on the console? This board offers some amazing operational flexibility, but loses maintenance-friendly modular inputs in the process (it appears to have a unified faceplate).  If you are not overwhelmed with sources or require remapping your I/O (i.e. don't need a router), then I'd reccomend adding $1500 to the price and going to the D70 which offers much more I/O flexibility and modular channel strips.  Or, you could spend lots more and get an actual router and a console that is merely a control surface.  Ultimately, that is the most future-proof solution IMO.

-Darren

P.S. I believe that Steve at RPC has mentioned your project to me. So, greetings from 70-miles north...

Their work is thankless, and a little overblown press once and awhile is about as bad as that gets. What's really aggravating, is to hear the vermin crawl out of their holes and whistle and otherwise deliberately disrupt emergency communications on the HWN and Maritime Mobile Net. Some Amateur operators in spanish and asian languages (one group allegedly operates within Florida) deliberately acts up on 14323 whenever the net is active on 14325.

Mr. Perry,

I've been laughing "since" I read your post; it made so little "sense". Your composition could be "harmful" to the broadcasting community. You might be a "freaking" genius, but my third grade English teacher would argue otherwise. In fact, it seems the "existence" of school may be a foreign concept to you. As academic "tornadoes", folks here may well fling you aside. It's "possible" you shouldn't be posting to Usenet at all if its readers focus on your errors instead of your point.

Is it any wonder we argue so much in this country when so many of us do not have enough basic education to read beyond the daily doses of op-ed rhetoric?

> and you just
> cut half of the spots from your station.

Advertising is sold by delivery of audience. If you cut spot load by 50%,
and do not increase listenership, your revenue decreases by half (assuming
you are selling all your inventory).

>  So simple, yet many are too afraid to
> turn down any advertiser to do it.    We did it and it works just fine.
> Better to
> turn away advertisers than listeners!     If you have listeners, you will
> always have
> advertisers,  but you don't get listeners from having more advertisers,
> you get LESS
> listeners.

There are simple metrics applied to the buying of ad time, and they relate to the cost per listener, experessed as cost per thousand, cost per point, etc. Simply reducing spot loads does not improve the rate on the remaining accounts.

> This is the problem with those in radio management, they never just ask

> of a song or spot, it means time to drop it!

Actually, a DJ listens far more per week than all but the most agressive listeners. The best way to find out what listeners want is to ask the listeners. Which is what most major stations do.

>
>> Sometimes stations play the same spot twice during a
>> single set! How effective can that be to that customer?
>
> I never understood that.

It's researched and very effective in increasing memorability through repetition. As are bookends.

>   If I was the advertiser, I would much rather have had the
> extra spot play in another hour or on another station than waste two in
> the same
> break.

Generally, if this happens, the advertiser has paid extra to make it happen. Because it works so well.

Many station groups have long limited commercial percentages to well below
what is considered excessive. There is nothing new in this. Oddly, back in
the 50's and 60's when many claim such great radio was done, the FCC had to
actually create an implied guideline of 18 minutes an hour. Most stations
today are well below that, and one I work with are in the 10 minute range
consistently.

Advertisers do not call stations, especially big ones. Radio does not work
this way, advertising does not work this way, marketing does not work this
way

This is nothing new. I ran a top rated FM in the late 60's that ran 2
minutes of spots an hour. It billed as much as any station in the market.
There are plenty of examples of this.

Chris,

You're referring to a technology called RDS (radio data service), in which an RDS-equipped station (not all are) can transmit data to an RDS-enabled receiver (again, not all are). Precicely what data is transmitted would be up to the station management, but it can certainly be program-specific information.

I'm not aware of any proximity devices that would display the RDS info. It's conceivable though. A radio receiver could be equipped with, perhaps, BlueTooth technology, which could make it possible to send the info to a BlueTooth cell phone, for instance.

Dan

And how was the hurricane the fault of the power company?   My uncle is down there right now helping FPL to reassemble your local electric grid because it was largely trashed by Frances.  He's a lineman here in NC who volunteered to join the thousands of linemen and technicians from other states who rushed in to assist FPL in this time of crisis.  Those guys have a tough and often risky job but they're busting their butts to get it done.  Are you doing anything to assist other than whining about it in a newsgroup?

I think you owe them an apology.

Would you consider this a legal ID or a bogus ID? I say "bogus", but the tv station obviously says "legal".

Only a visual ID (no audio ID) with the call letters, channel number, and the city of the OTHER tv station that they are not in big easy to read letters followed by the call letters, channel number, an city of the station that they really are, in small hard to read tiny letters so small that you have to be right up at the screen AND holding a magnifying glass to make it readable to you.

The U.S. has already roled out terrestrial digital. For quite a long time now, (several months) WKKY 104.7 FM in Geneva, Ohio has been broadcasting digitally.

They announce it on the air all the time since they started broadcasting digitally months ago.

When it comes to music, that's not true at all.

Unless you have the longest TSL the world has ever seen, the DJ's will naturally get tired of hearing a song LONG before the listeners do.

If you've ever done any kind of research, you'll know that when 'burn' starts to affect favorablity is when the audience is tired of it; not until.  That takes a LOT longer for listeners than it does for air performers (who hear the songs a LOT more often). THAT'S when you either cut back the appearence of a song or drop it.  Until then, it's NOT a neagative to the listeners.

You are not programming to the air performers so, to be blunt, if they're tired of a song, it really does not matter what they think or reflect how the listeners feel.

To all those livivng in the UK,
i would like to ask you what your thoughts are on the representation
of crimein the media where you live. Do you think that media such as
the newspapers are giving out this information correctly?
Do you think that the way in which the media exaggerate some stories
can lead to moral panics?
Can you think of any advantages or disadvantage that the media have
when reporting these crime stories?
I would be grateful for your thoughts on this topic.
Thanks
tasha

We've veered way off topic, and I'm not going to push through posts in this thread to rec.radio.broadcasting anymore. If you want to continue posting in this thread in newsgroups other than RRB, that's your choice, but no more in RRB. The thread stopped being about radio after (roughly) the second post, or maybe the third.

Cheers,
Steve [RRB Moderator]
